η photo-production simulations (Primakoff)

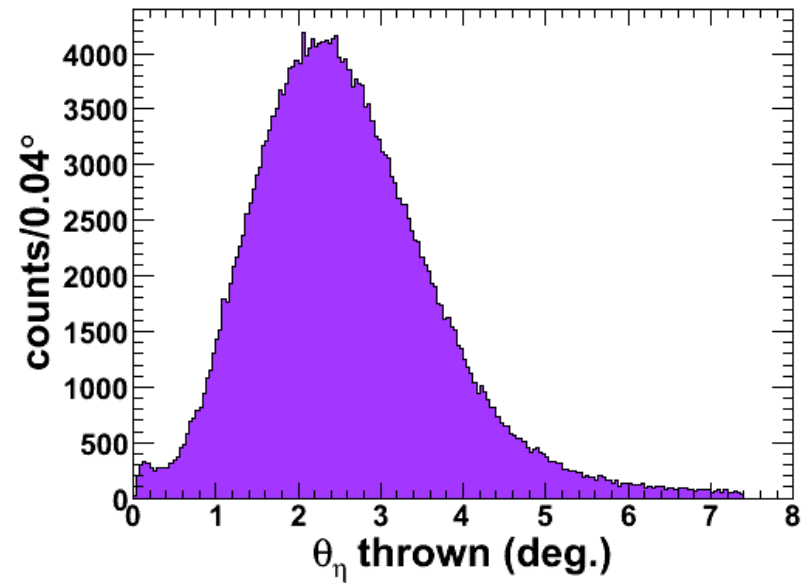

Aram Teymurazyan

$\gamma p \rightarrow \eta p$ cross-section

- Due to the negative interference of the amplitudes the Primakoff and coherent events cannot be generated separately

$\gamma p \rightarrow \eta p$ generator

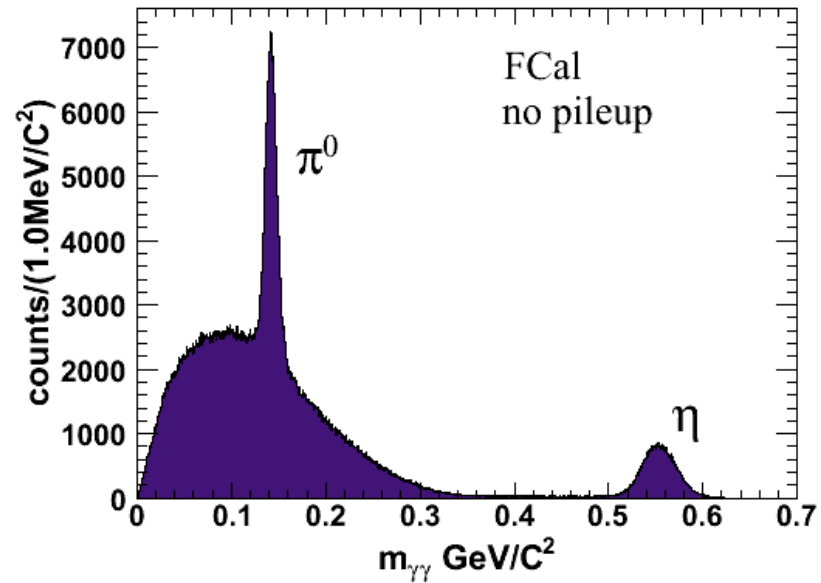

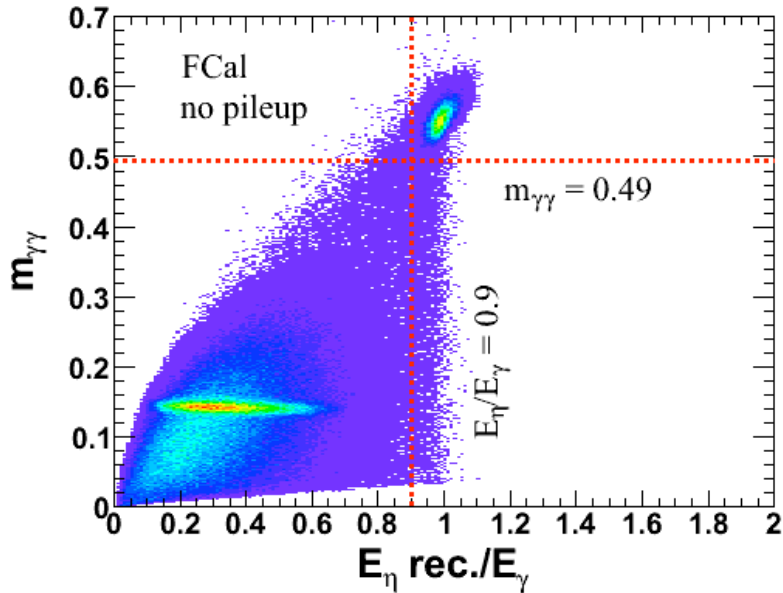

EM background and pileup

- EM background
 - Soft photons from genphoton + HDGenat internal generator (no coherent peak)
- EM pileup
 - HDGeant internal generator (no coherent peak)
- $R_{(E_\gamma=0.0012-12.0\text{GeV})} = 2.21 \text{ GHz}$
- $R_{(E_\gamma=10.7-11.7\text{GeV})}^{\text{collimated}} = 3.08 \text{ MHz}$
(needs to be bumped up at least x4)

η -signal only (no EM pileup)

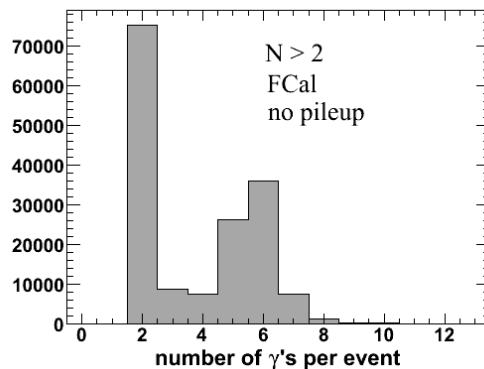

Dominant neutral modes:

$\eta \rightarrow \gamma \gamma$ 39.33%

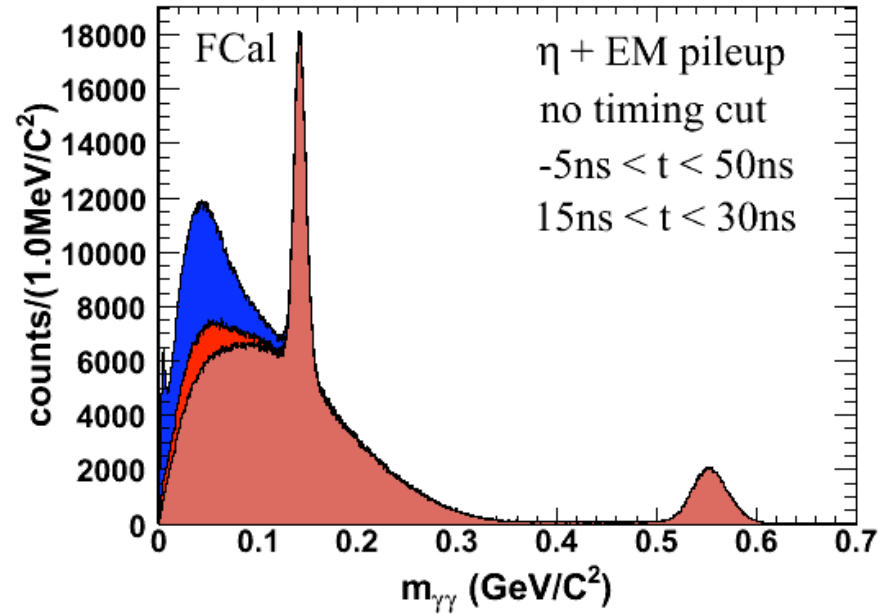

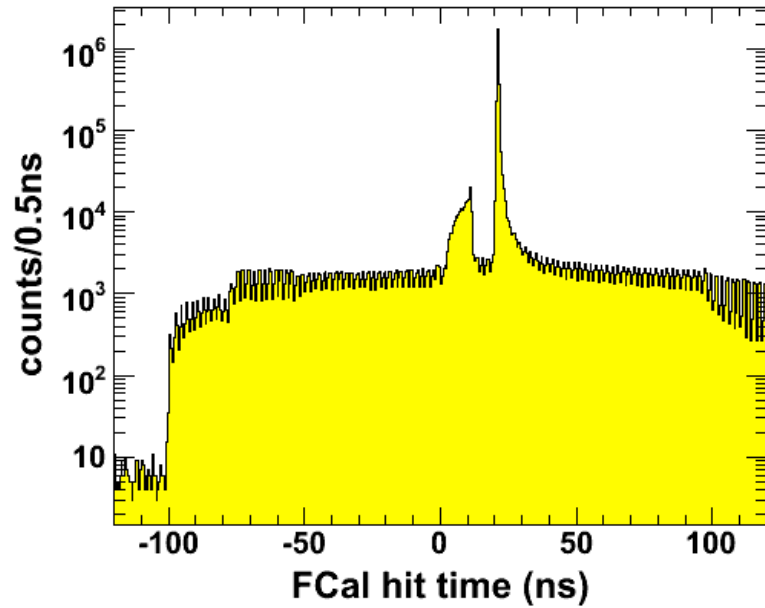

$\eta \rightarrow 3 \pi^0$ 32.24%

$m_{\eta} > 0.49 \text{ GeV}/C^2$

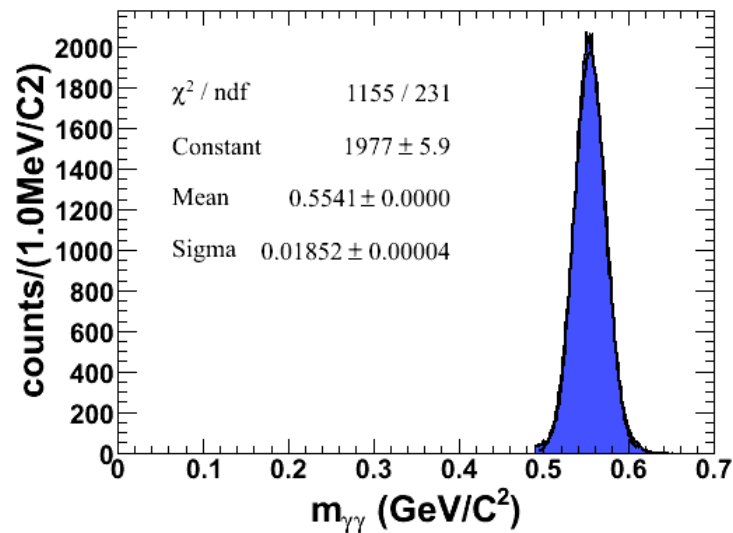

$0.120 \text{ GeV}/C^2 < m_{\pi^0} < 0.165 \text{ GeV}/C^2$

$\eta \rightarrow \gamma \gamma + \text{EM pileup}$

$\eta \rightarrow \gamma \gamma + \text{EM pileup}$

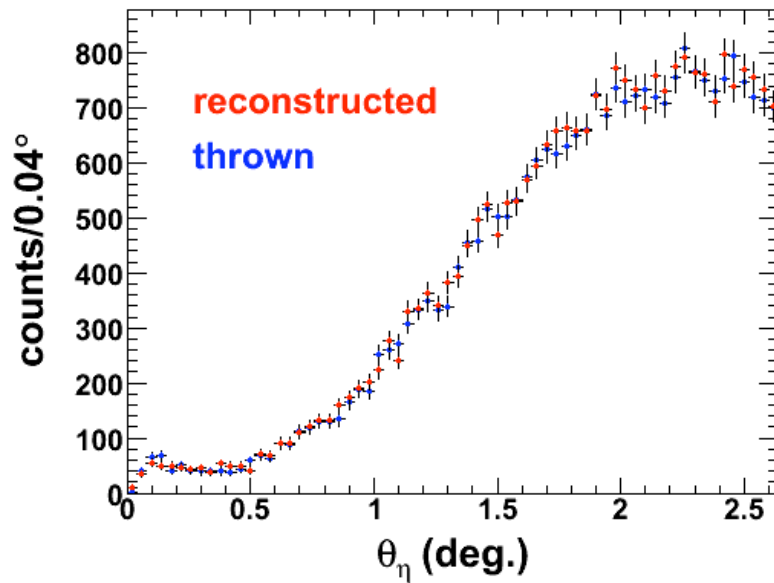

Acceptance for
 $\eta \rightarrow \gamma \gamma$ events ~
70-75%

$\eta \rightarrow 3\pi^0 + \text{EM pileup}$

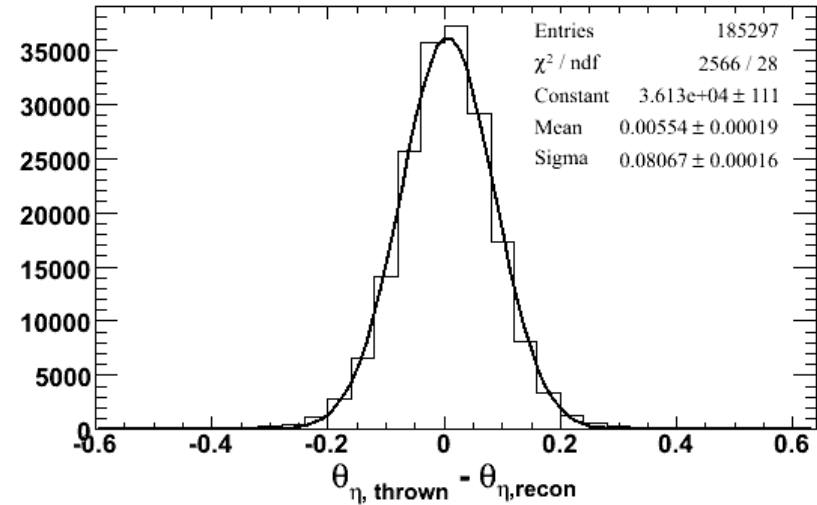

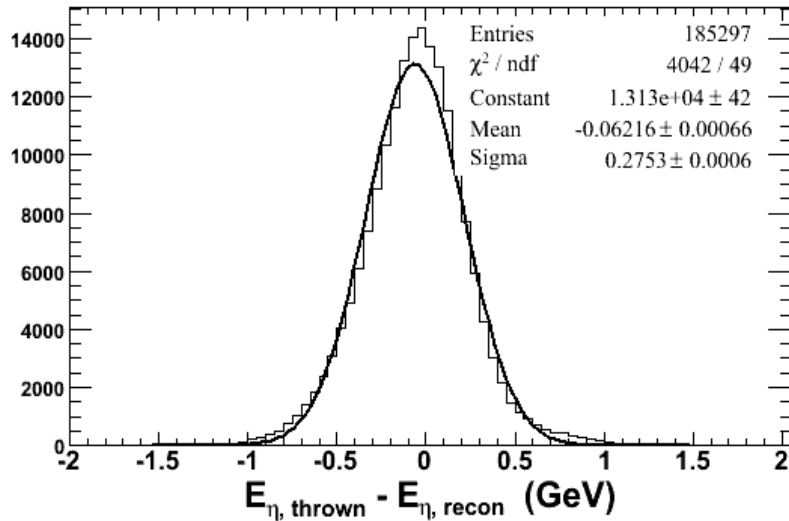

$\eta \rightarrow 3\pi^0 + \text{EM pileup}$

FCAL acceptance for $\eta \rightarrow 3\pi^0$ events $\sim 22\%$

FCal resolutions for $\eta \rightarrow \gamma \gamma$ events

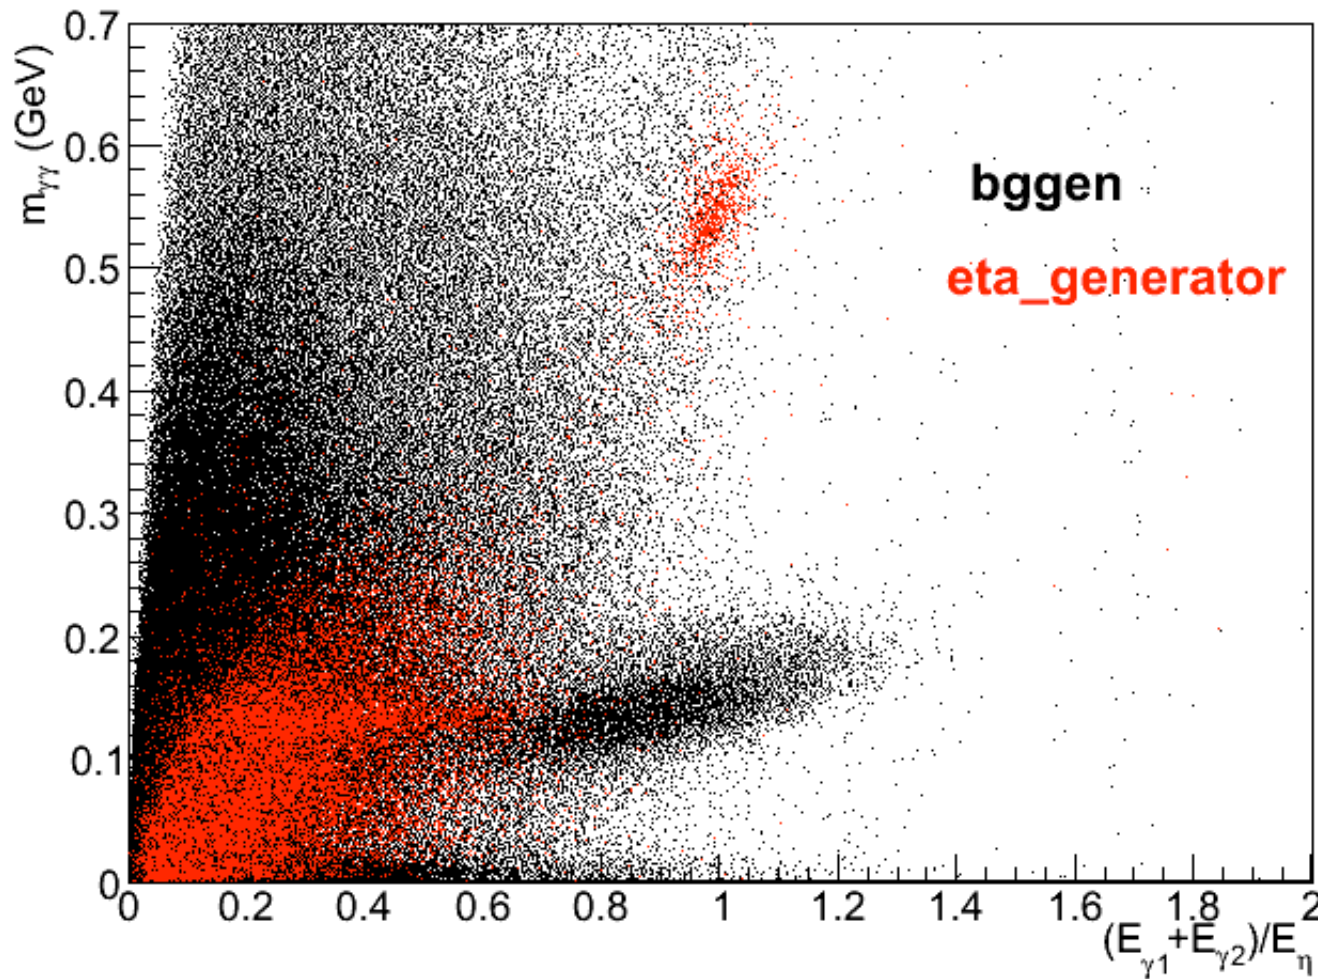

Future plans

- Re-run with higher pile up rate
- Finish accumulating statistics for backgrounds
 - EM background
 - Hadronic

Backgrounds

The $\gamma p \rightarrow \eta p$ events are excluded from the bggen output (process type 8)

$$\sigma_{\text{hadr.}} \approx 124 \mu\text{b}$$

$$\sigma_{\text{Prim.}} \approx 0.00072 \mu\text{b}$$

$$\sigma_{\text{Prim.+coh.}} \approx 0.057 \mu\text{b}$$

$\gamma p \rightarrow \eta p$ generator

- θ_γ and E_γ - incoherent bremsstrahlung
- θ_η - theoretical cross-section
- (E_η, \vec{p}_η) - kinematics
- (X, Y, Z) - in target

$\gamma p \rightarrow \eta p$ generator, vertex position

Target:

Length = 30.0 cm, or $\sim 3.46\%$ ($X_0 = 866$ cm)

density = 0.0708 g/cm³, or 1.2699×10^{24} prot./cm²

attenuation length = 81.9672 g/cm² ($\sigma_{\text{tot. atten.}} = 1.22 \times 10^{-2}$ cm²/g)
