

Database Storms

Mark Ito
Software Meeting
April 30, 2019

Long Story Short

- Director's Office notices that www.jlab.org is broken.
- [We switch CCDB access](#) from default = SQLite to default = MySQL
- [We see huge loads on halddb.jlab.org](#), the MySQL server
- Computer Center gets involved
- [Upgrade halddb](#)
- [Does no good](#)
- Meetings on database servers with IT
- Decide on larger server, shared with Hall B, intermediate term solution
- Near-term solution: [SQLite on the work disk](#)
- Long-term solution: Reduce cost of sorts? Postgres? Server farm?
