

Subject: CCDB roadmap

From: Dmitry Romanov <romanovda@gmail.com>

Date: 11/19/2013 05:49 PM

To: "Mark M. Ito" <marki@jlab.org>

0.9

1. Better errors descriptions which give user suggestions on how to do it right
2. -v start flag and var command to set working variation
3. unit testing rewritten. Before there were separated test functions for MySQL and SQLite. Now tests are unified for both databases thus it checks that functionality is unified across databases and new CCDB providers could be added.
4. web site removed so regular users are not obliged to download a bunch of web server files
5. C++ readout part tracks idling and closes a connection if CCDB is not used for a long time. Closed connections automatically reopened if needed.
6. Updated documentation?
7. Web site renew and fixes

Is the next version 0.10 or 1.0?

0.10-1.0

1. Better C++ unit tests, unified unit tests
2. Resources?
- 3.
