

Ambiguities in photoproduction of $\eta\pi$

Considering unpolarized intensity, S and D waves, positive reflectivity and $m=0,1$.
Four equivalent solutions solutions.

$$a_2 = S + \sqrt{5}D_0$$

$$v_{1,2} = \frac{1}{2a_2} \left(\sqrt{30}D_1 \pm \sqrt{\Delta} \right)$$

$$\Delta = 30D_1^2 - 8(S^2 + \sqrt{5}D_0S - 5D_0^2)$$

2

1st solution

$$S_0(v_1, v_2) = \frac{a_2}{6}(2 + v_1v_2)$$

$$D_0(v_1, v_2) = \frac{a_2}{3\sqrt{5}}\left(2 - \frac{v_1v_2}{2}\right)$$

$$D_1(v_1, v_2) = \frac{a_2}{\sqrt{30}}(v_1 + v_2)$$

2nd solution

independent of 1st solution

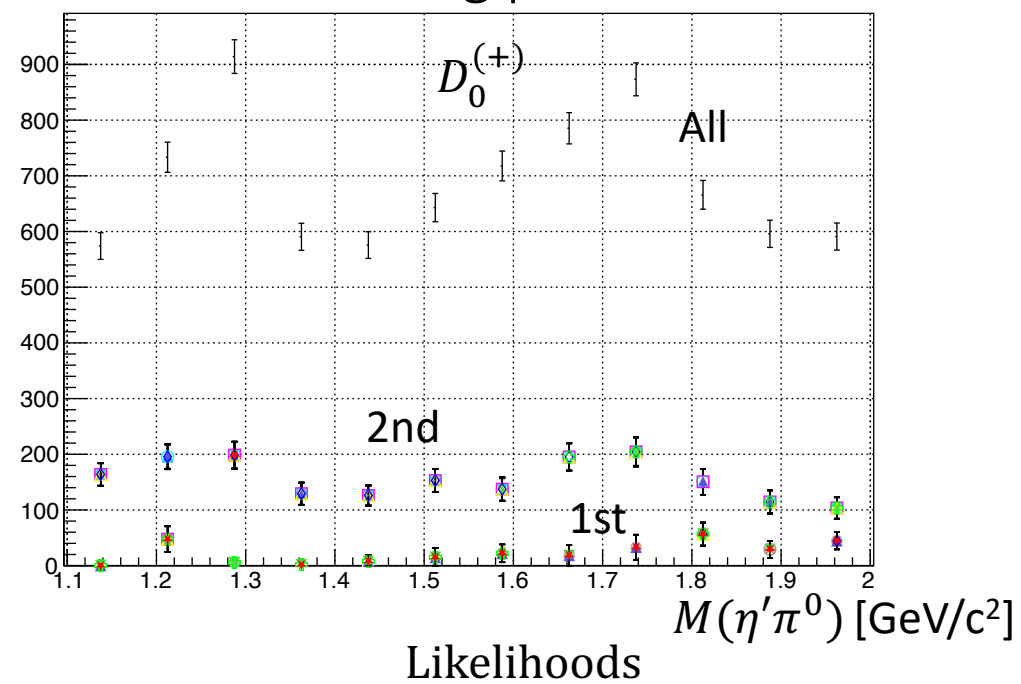

$$\{S_0(v_1, v_2^*), D_0(v_1, v_2^*), D_1(v_1, v_2^*)\}$$

Two other solutions (v_1^*, v_2) and v_1^*, v_2^* are the complex conjugates of 1st and 2nd solutions.
