

# Analysis launches on the OSG

- Try to reuse as much infrastructure as possible

# Analysis launches on the OSG

- Started with request from Igal
  - $\gamma p \rightarrow 4\gamma p, 4\gamma(p), \gamma\gamma(p), \gamma\gamma\pi^+\pi^-(p)$

# Analysis launches on the OSG

- Started with request from Igal
  - $\gamma p \rightarrow 4\gamma p, 4\gamma(p), \gamma\gamma(p), \gamma\gamma\pi^+\pi^-(p)$
- Ran 30% of the jobs in 2 days
  - Started filling up disk on scosg20

# Analysis launches on the OSG

- Ran 30% of the jobs in 2 days
  - Started filling up disk on scosg20
  - 4 TB / user quota established
  - Requested resources: 1 core + 4 GB of RAM
    - ~5% of jobs exceed this limit
- Wrote data transfer script, copied files to volatile
- Resubmitted jobs, adding better checks to deal with problem nodes that suck up jobs
- Next steps:
  - Looking into reusing parts of MCWrapper for job accounting
  - Change merging scripts to push results to OSG Stash?
