

---

A first look at the decay  $\pi^0 \rightarrow e^+ e^- \gamma$

---

University of Athens

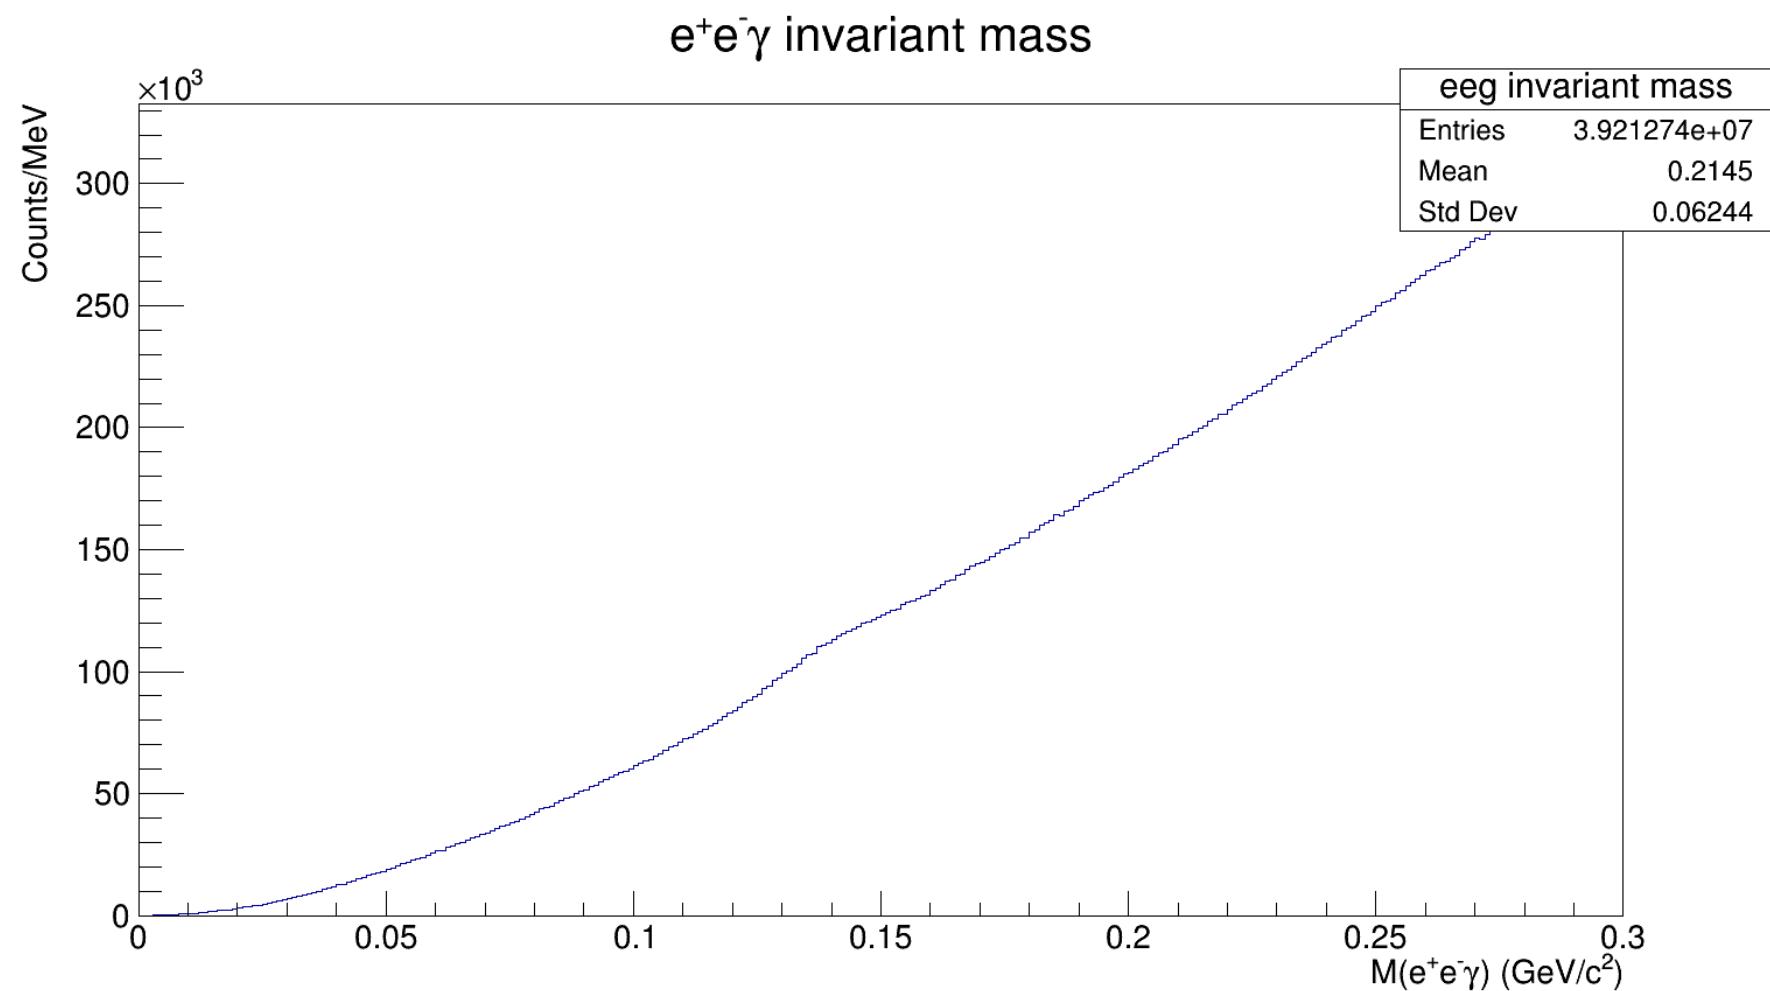

December 15, 2016

## Goals

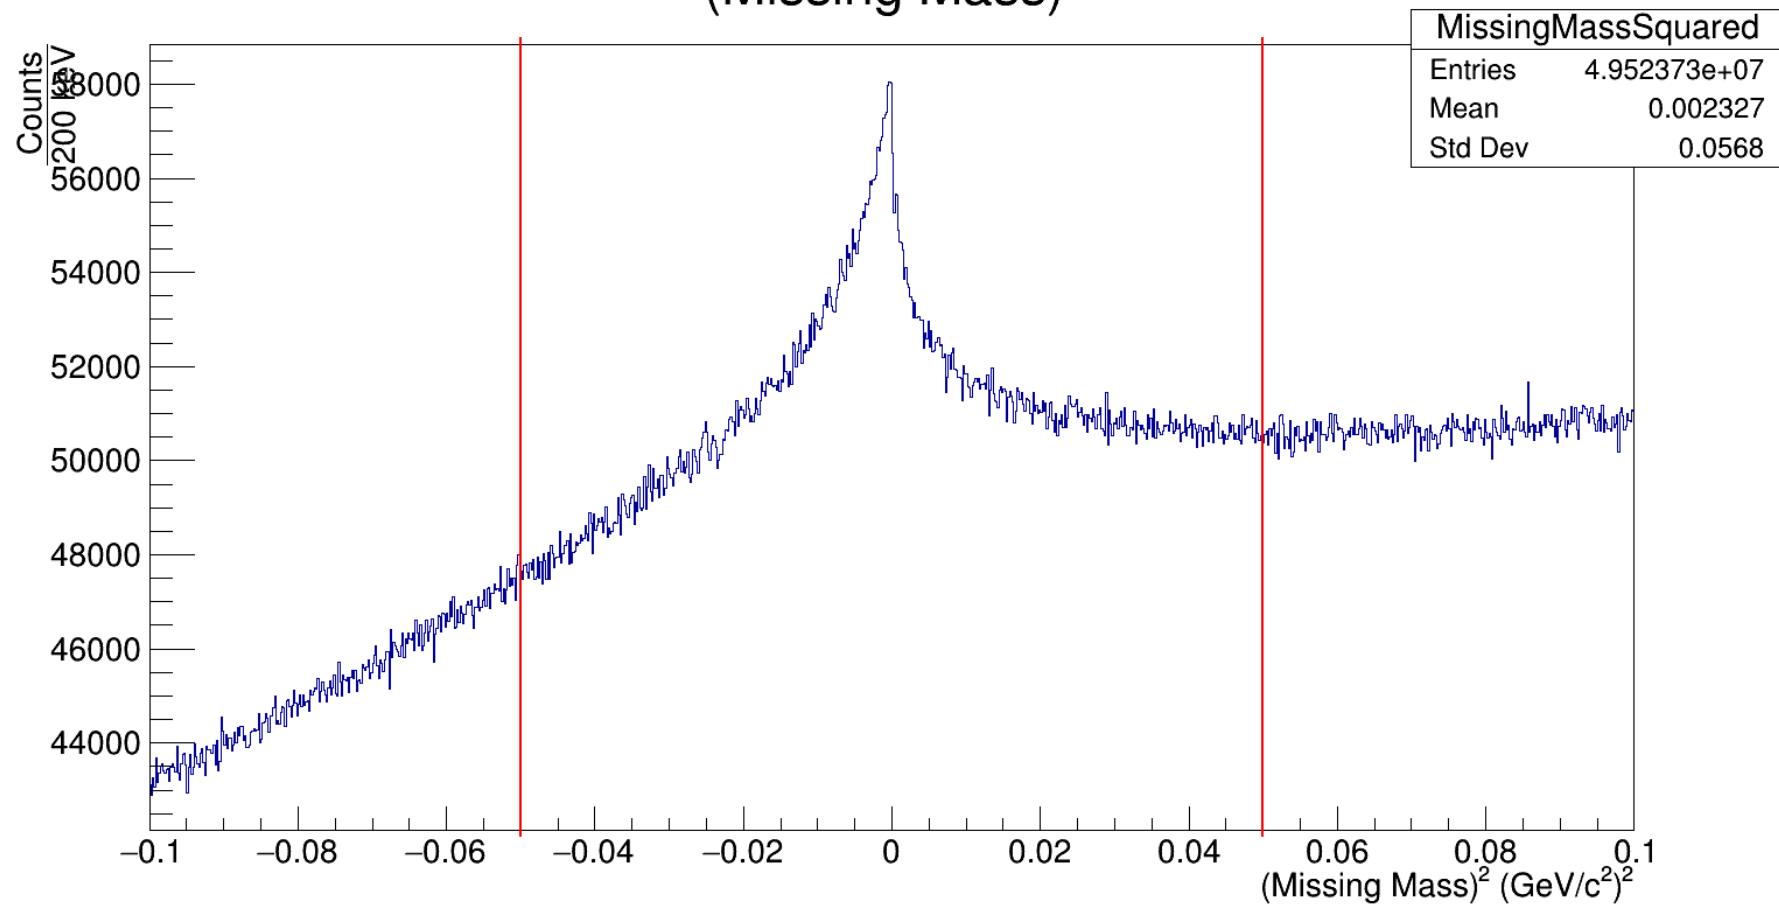

- Isolate "clean"  $\pi^0 \rightarrow e^+e^-\gamma$  events from the exclusive reaction  $\gamma p \rightarrow \pi^0 p$
- Use the bachelor photon from these events to determine the single-photon energy resolution of the detector
- Dataset: "Golden Runs", spring 2016

# Loose plugin cuts

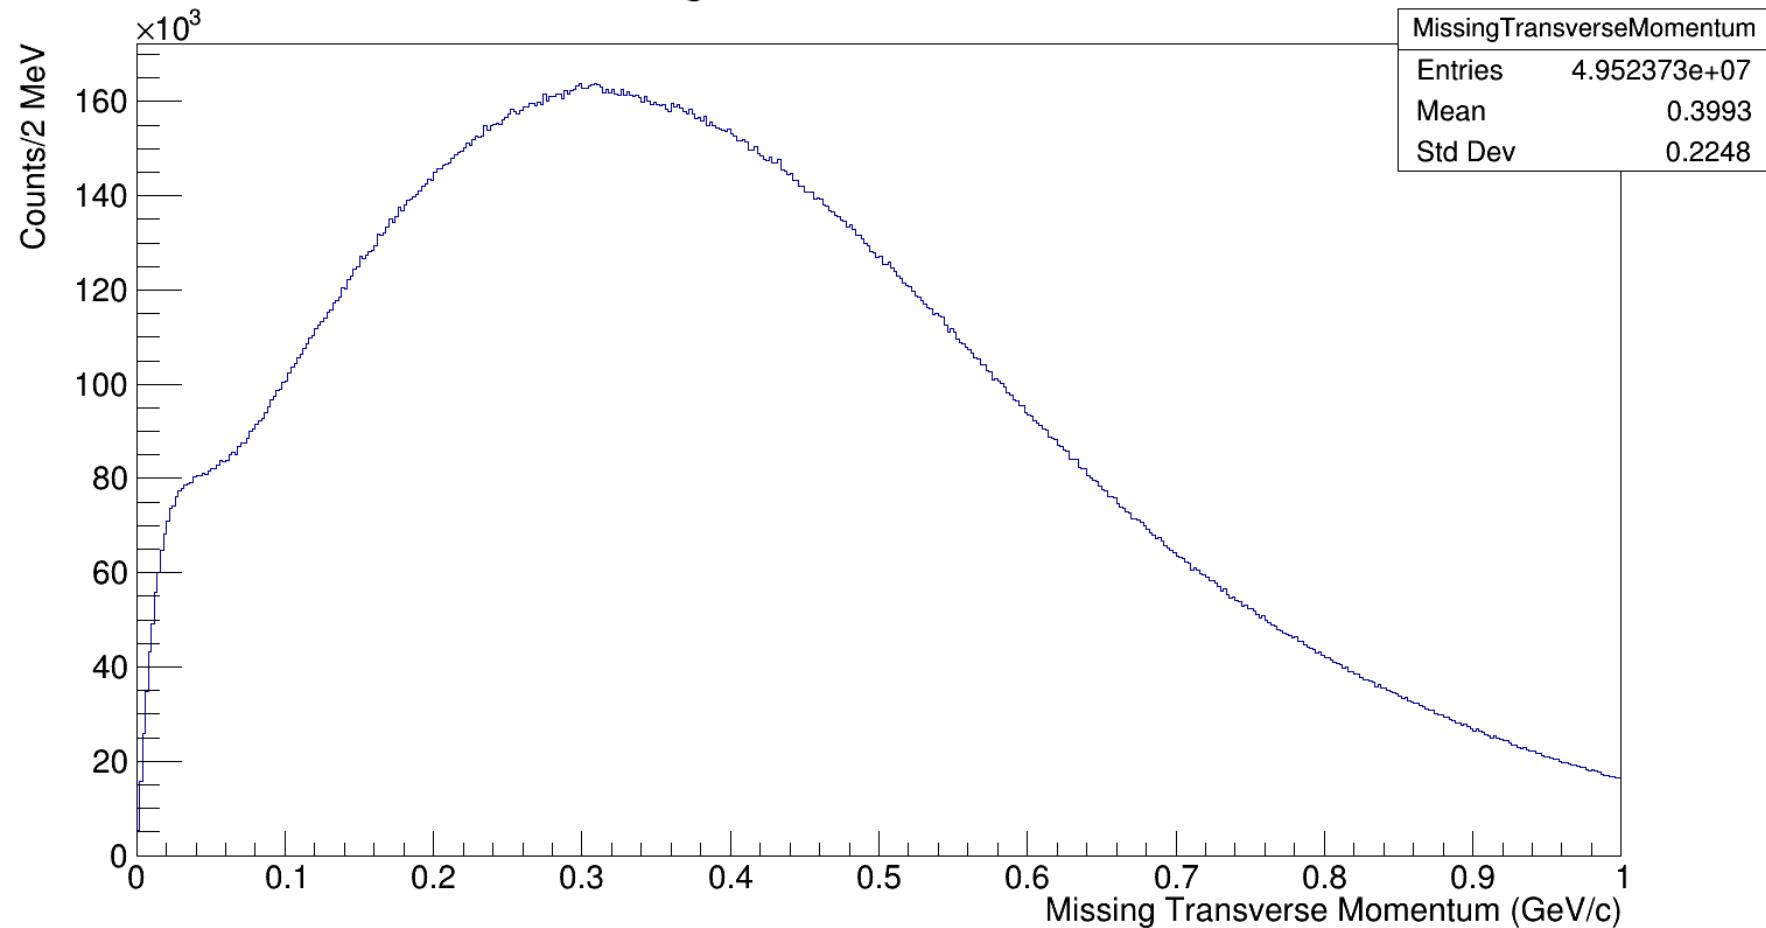

- Type of Kinematic Fit performed: P4 and Vertex fit
  - $\text{MaxPhotonRFDeltaT} = \frac{\text{BeamBunchPeriod}}{2}$ 
    - $\text{MaxExtraGoodTracks} = 5$
  - $\pi^0$  Invariant Mass cut: [0.0, 0.3] GeV
  - $(\text{MissingMass})^2$  cut: [-0.1, 0.1]  $(\frac{\text{GeV}}{c^2})^2$ 
    - PID  $\Delta t$ , protons, TOF:  $\pm 3ns$
    - PID  $\Delta t$ , protons, BCAL:  $\pm 3ns$
    - PID  $\Delta t$ , protons, FCAL:  $\pm 3ns$
    - PID  $\Delta t$ , positrons, TOF:  $\pm 1ns$
    - PID  $\Delta t$ , positrons, BCAL:  $\pm 2ns$
    - PID  $\Delta t$ , positrons, FCAL:  $\pm 3ns$
    - PID  $\Delta t$ , electrons, TOF:  $\pm 1ns$
    - PID  $\Delta t$ , electrons, BCAL:  $\pm 2ns$
    - PID  $\Delta t$ , electrons, FCAL:  $\pm 3ns$
    - PID  $\Delta t$ , photons, BCAL:  $\pm 3ns$
    - PID  $\Delta t$ , photons, FCAL:  $\pm 3ns$ 
      - dEdx cut in CDC

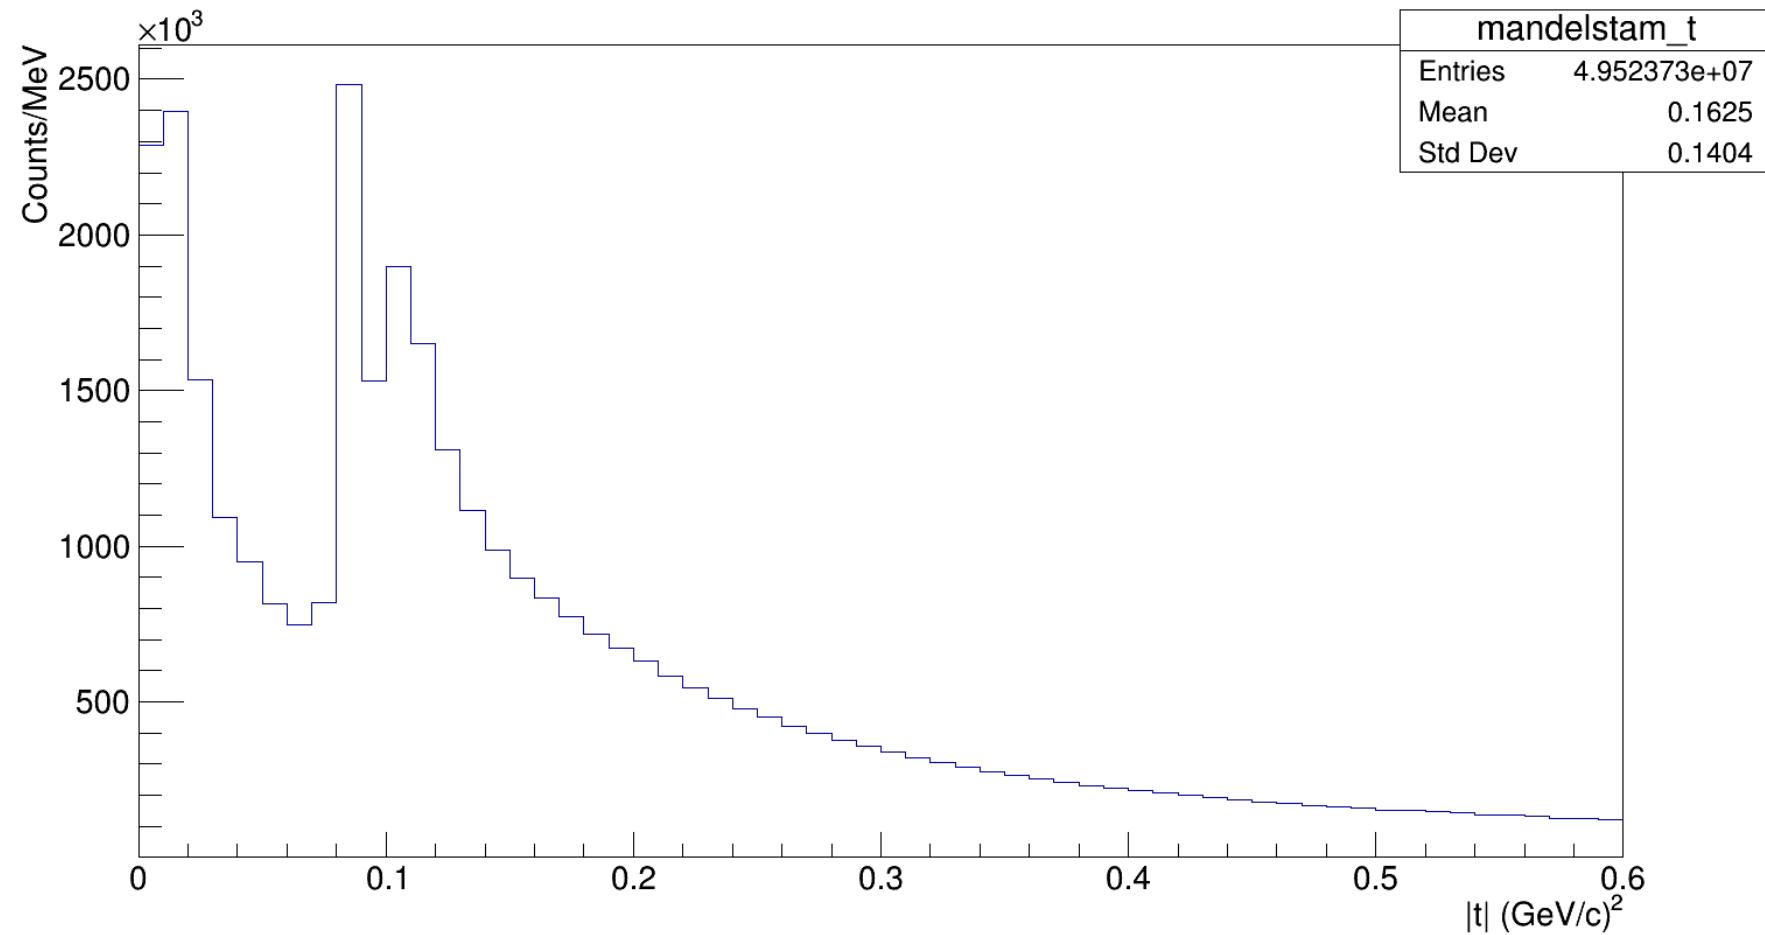

$(\text{Missing Mass})^2$

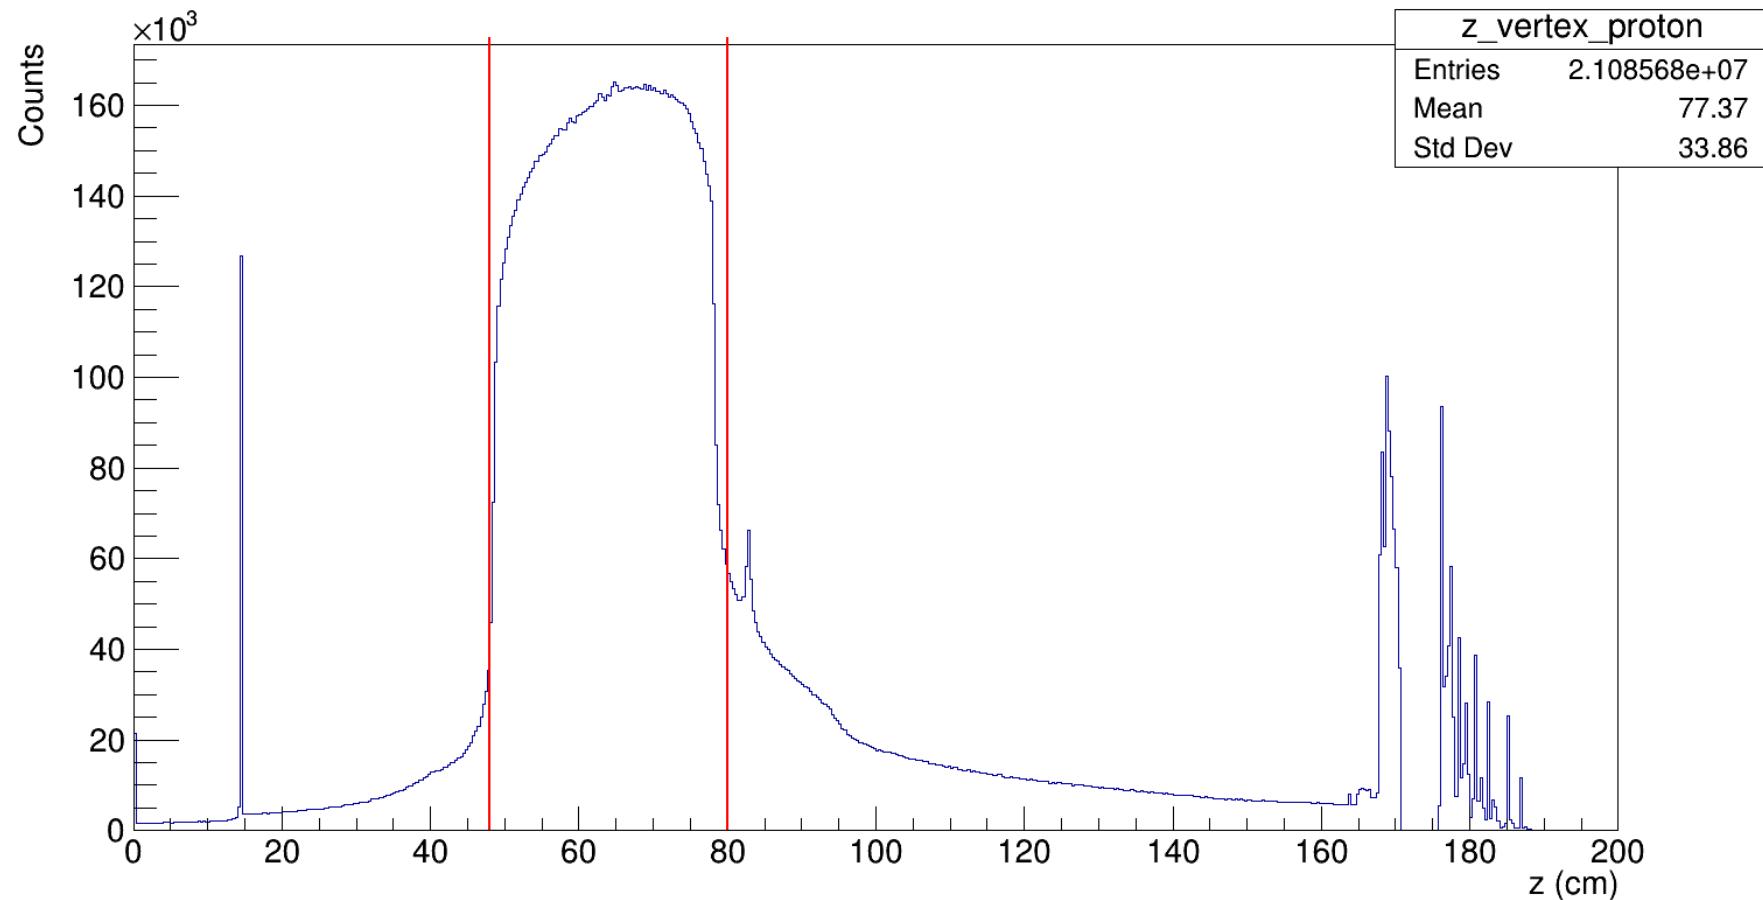

## Missing Transverse Momentum

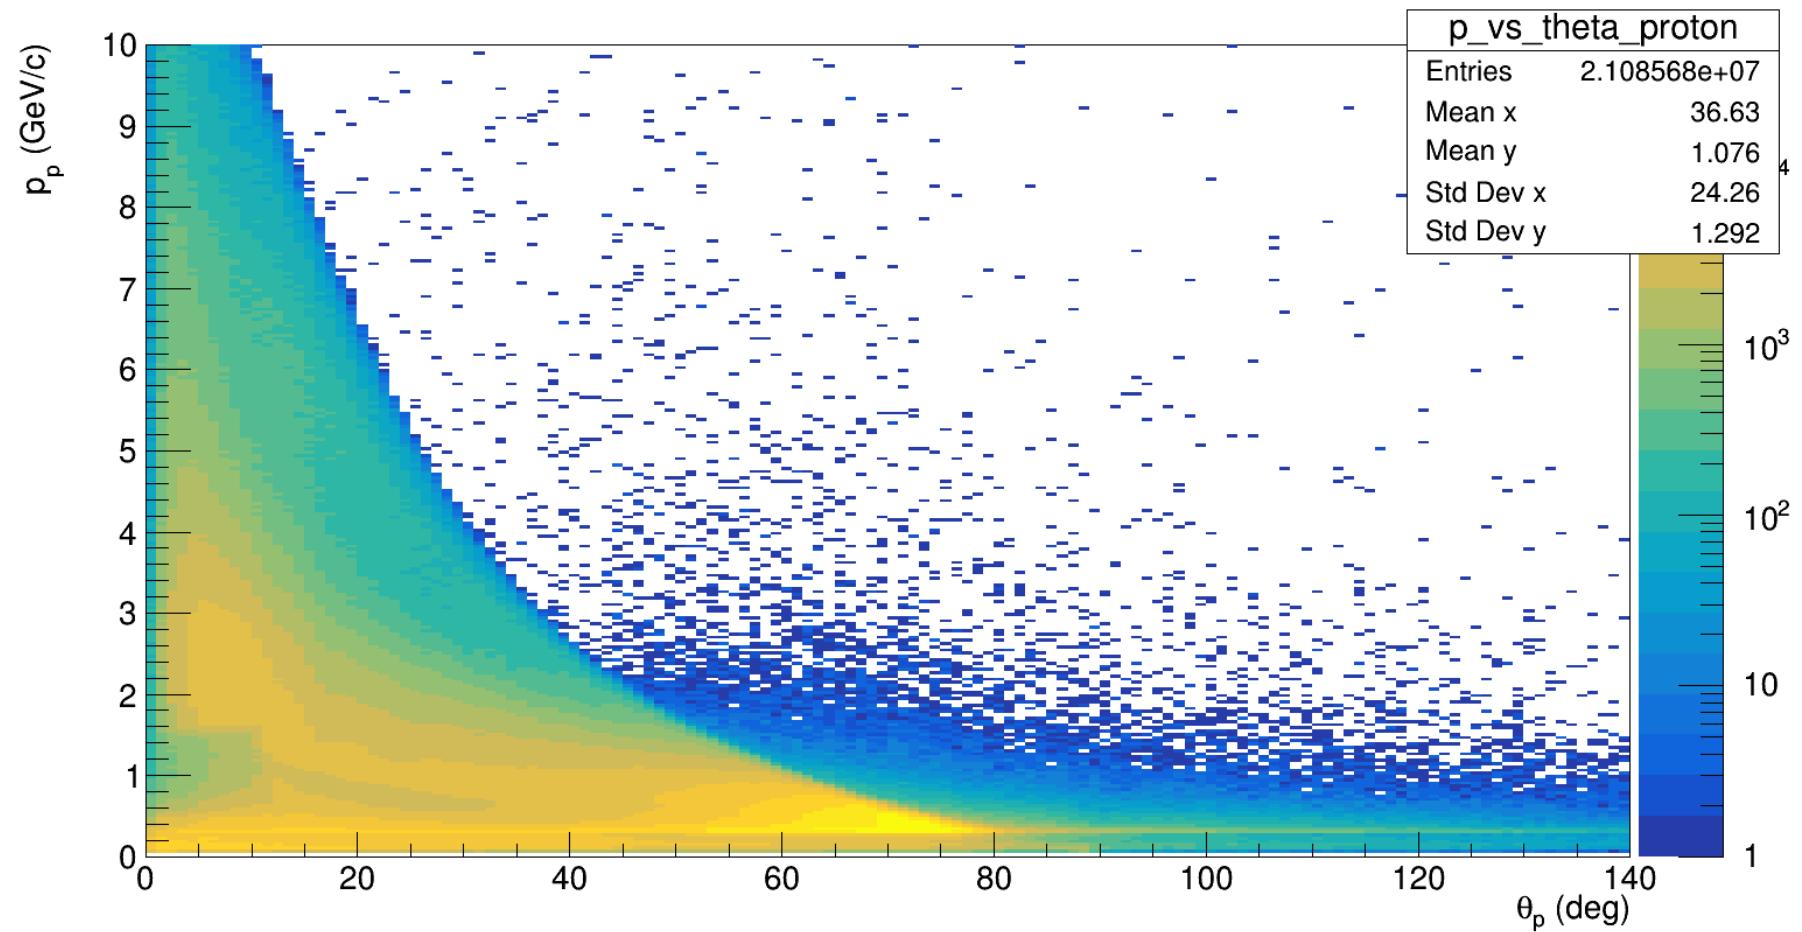

## Momentum transfer

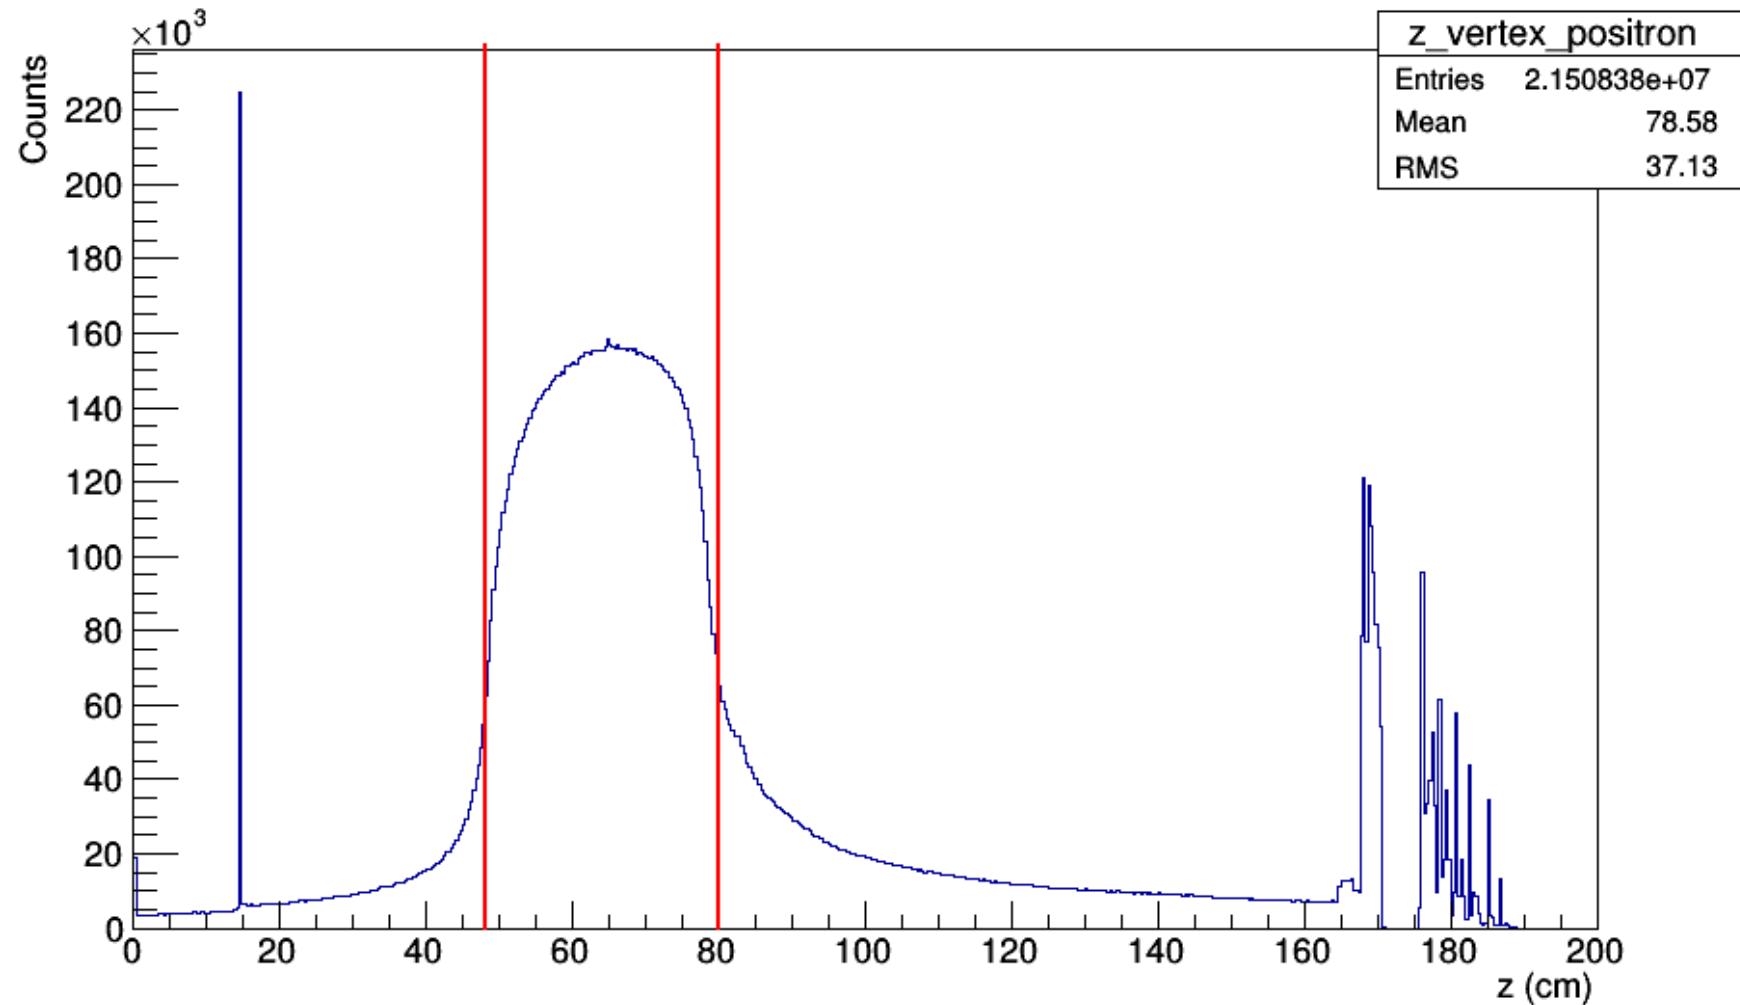

### Proton-vertex z-coordinate

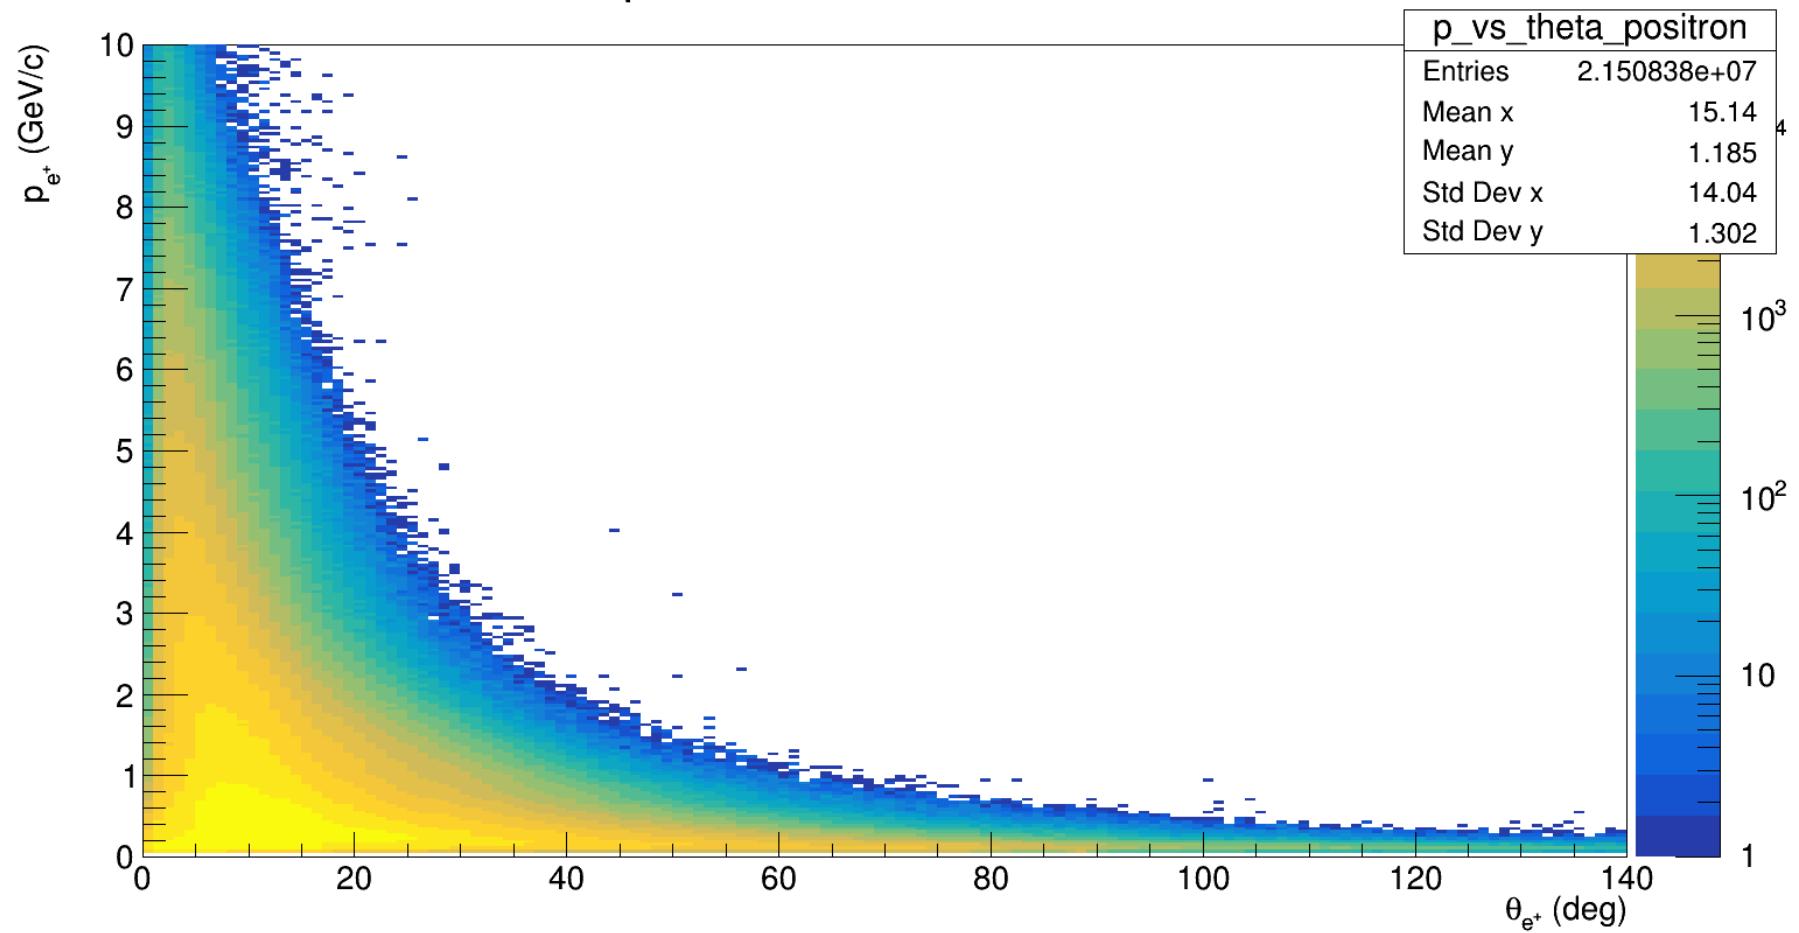

## Proton momentum vs $\theta$

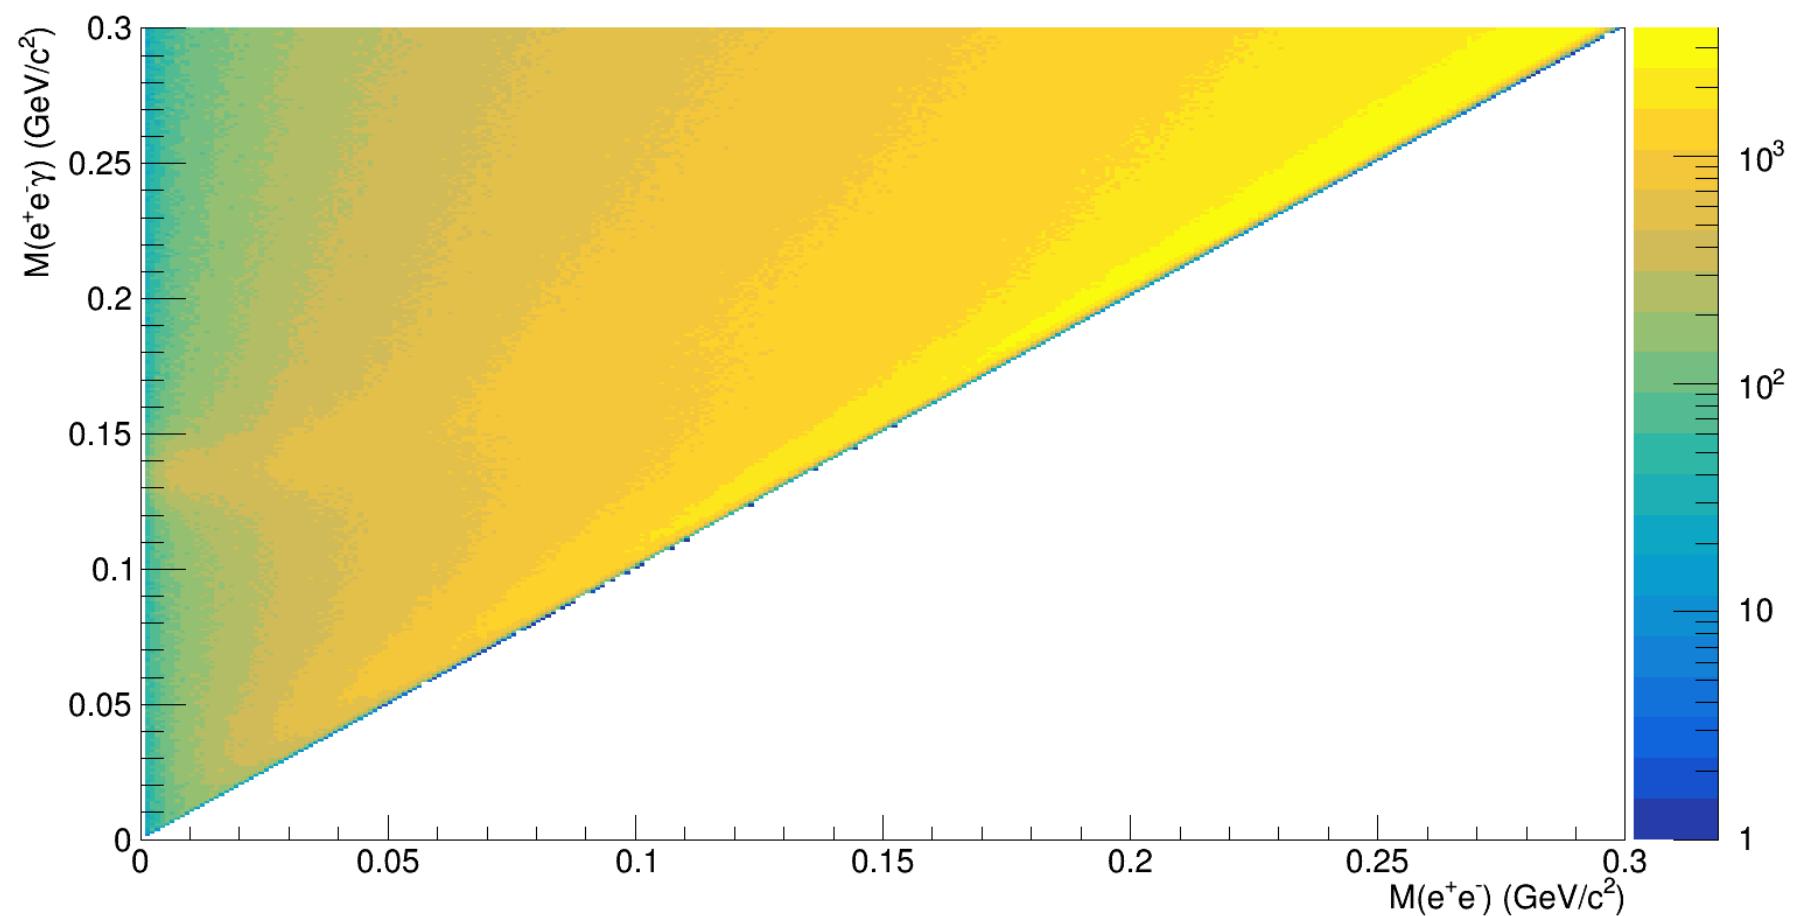

### Positron-vertex z-coordinate

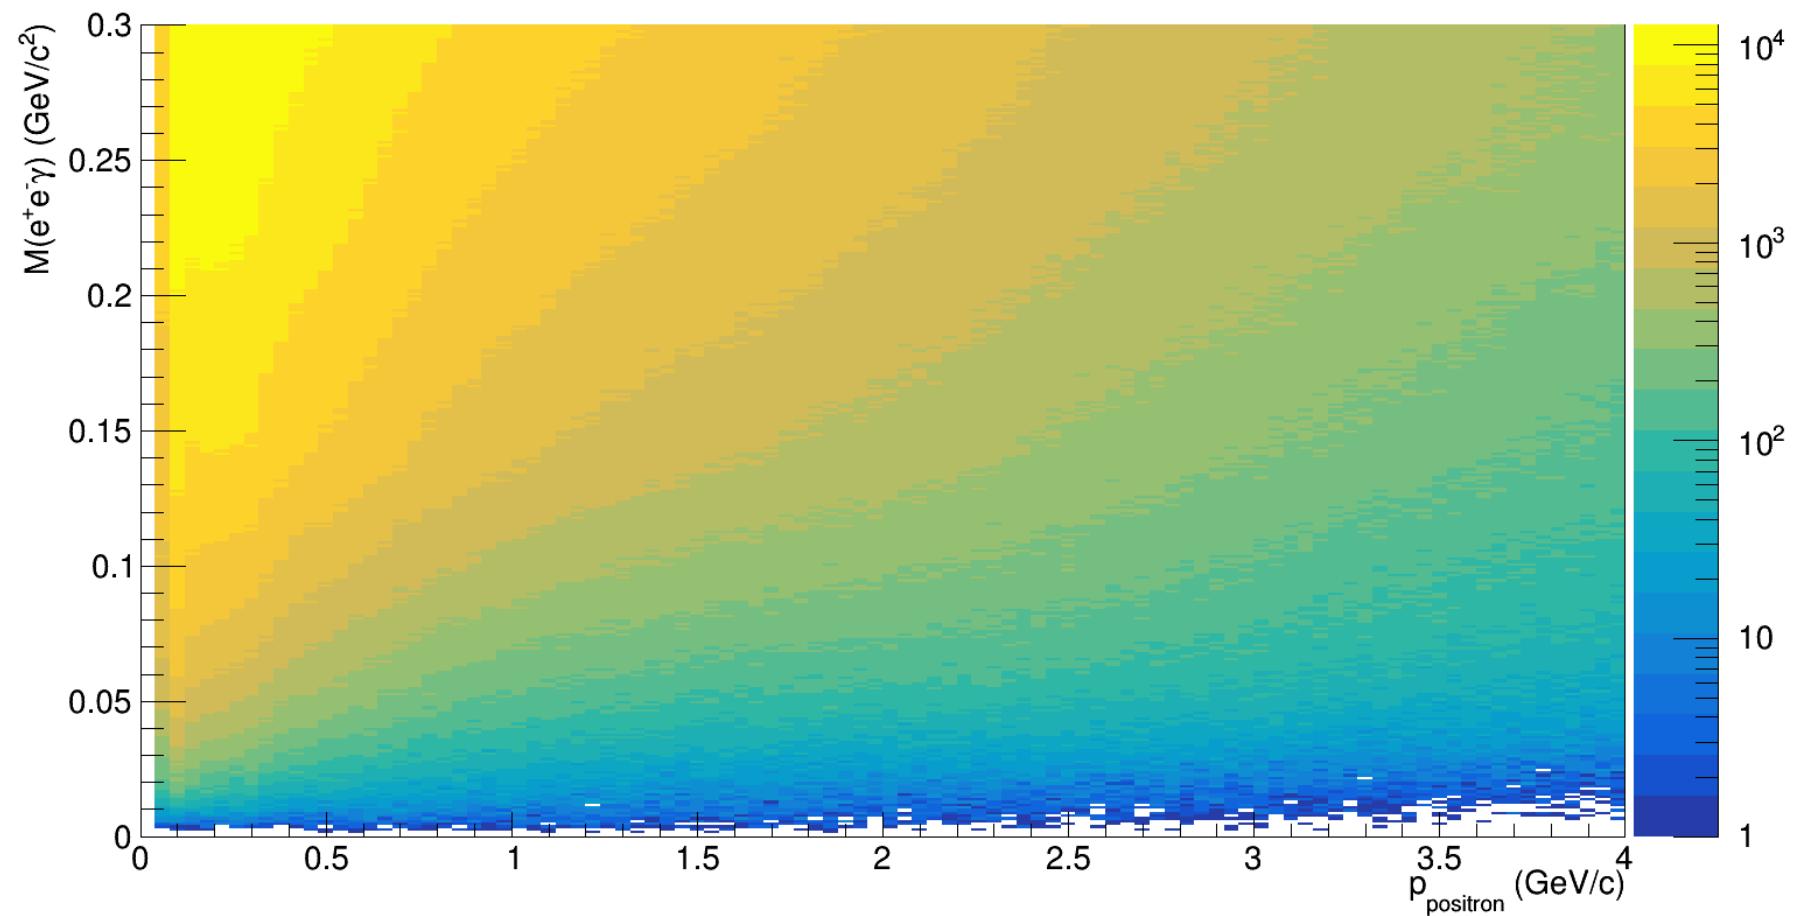

positron momentum vs  $\theta$

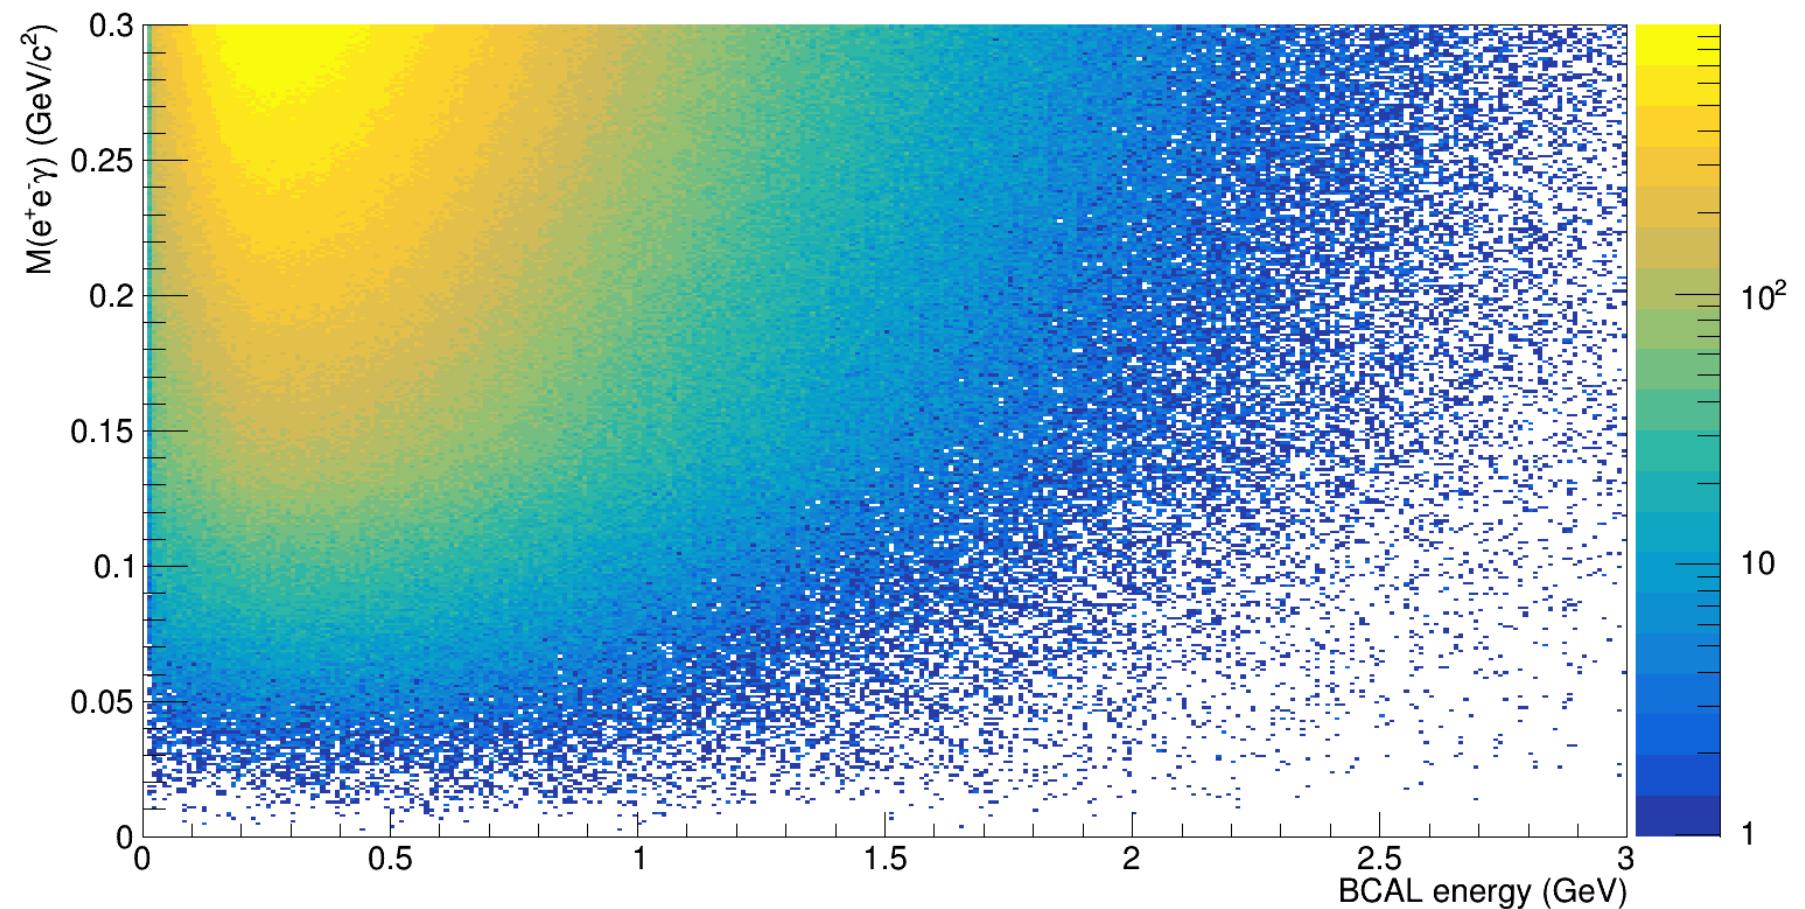

$e^+e^-\gamma$  mass vs  $e^+e^-$  mass

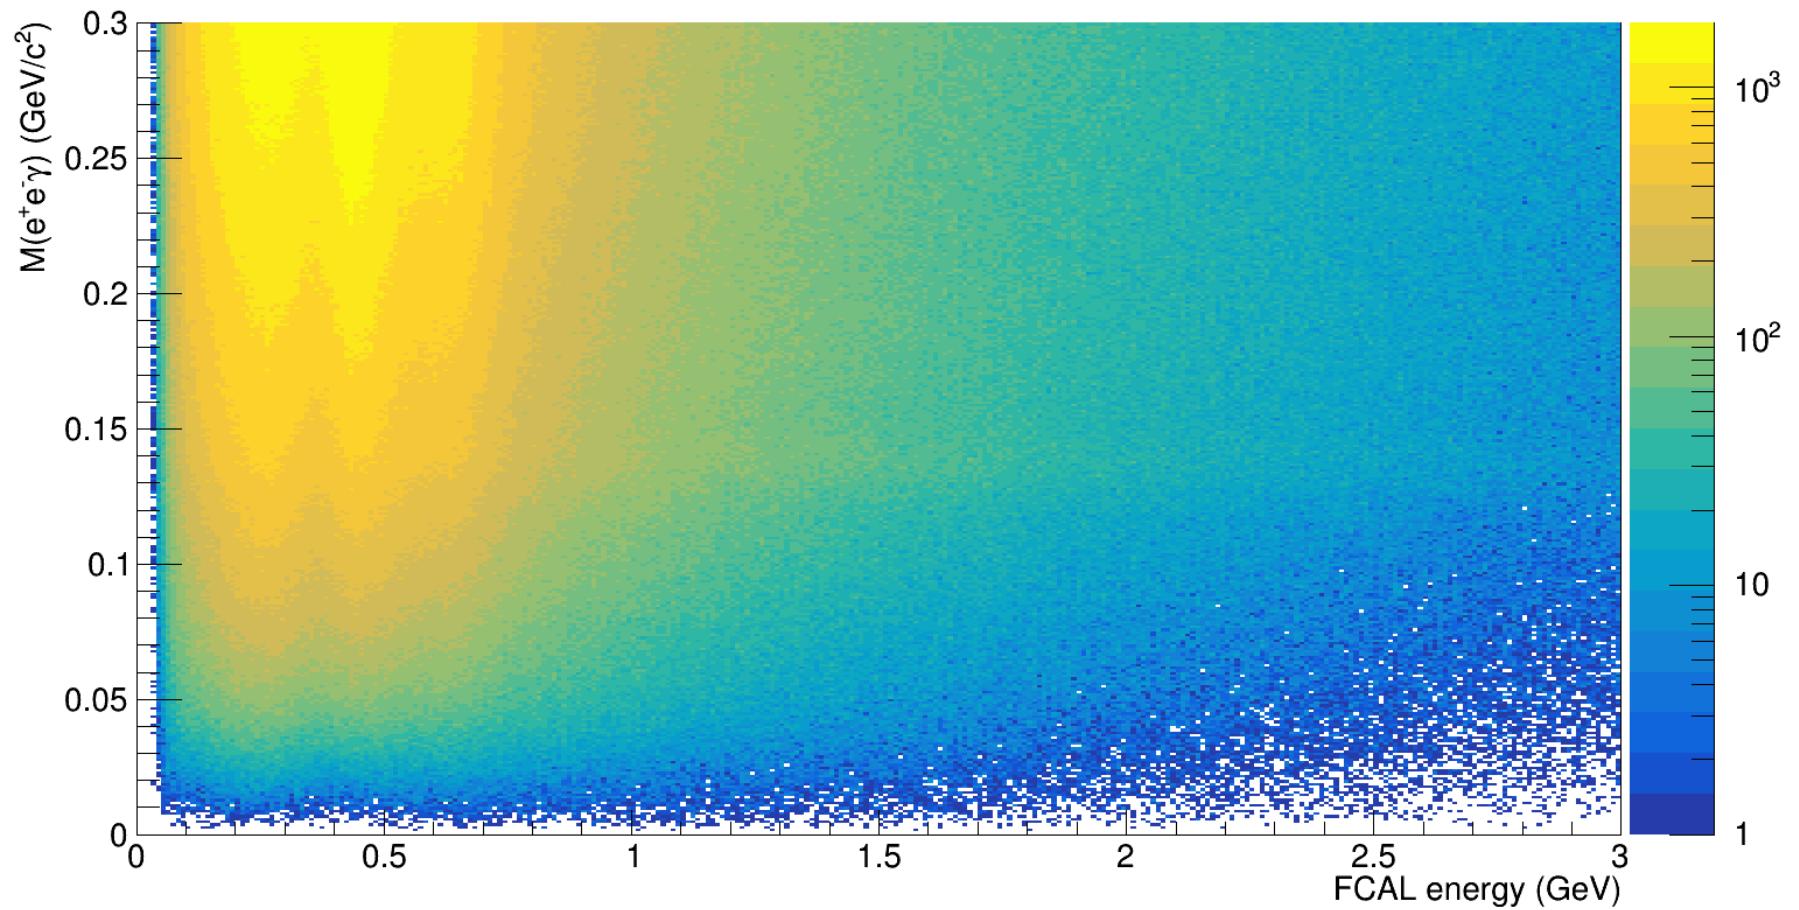

$e^+e^-\gamma$  mass vs positron momentum

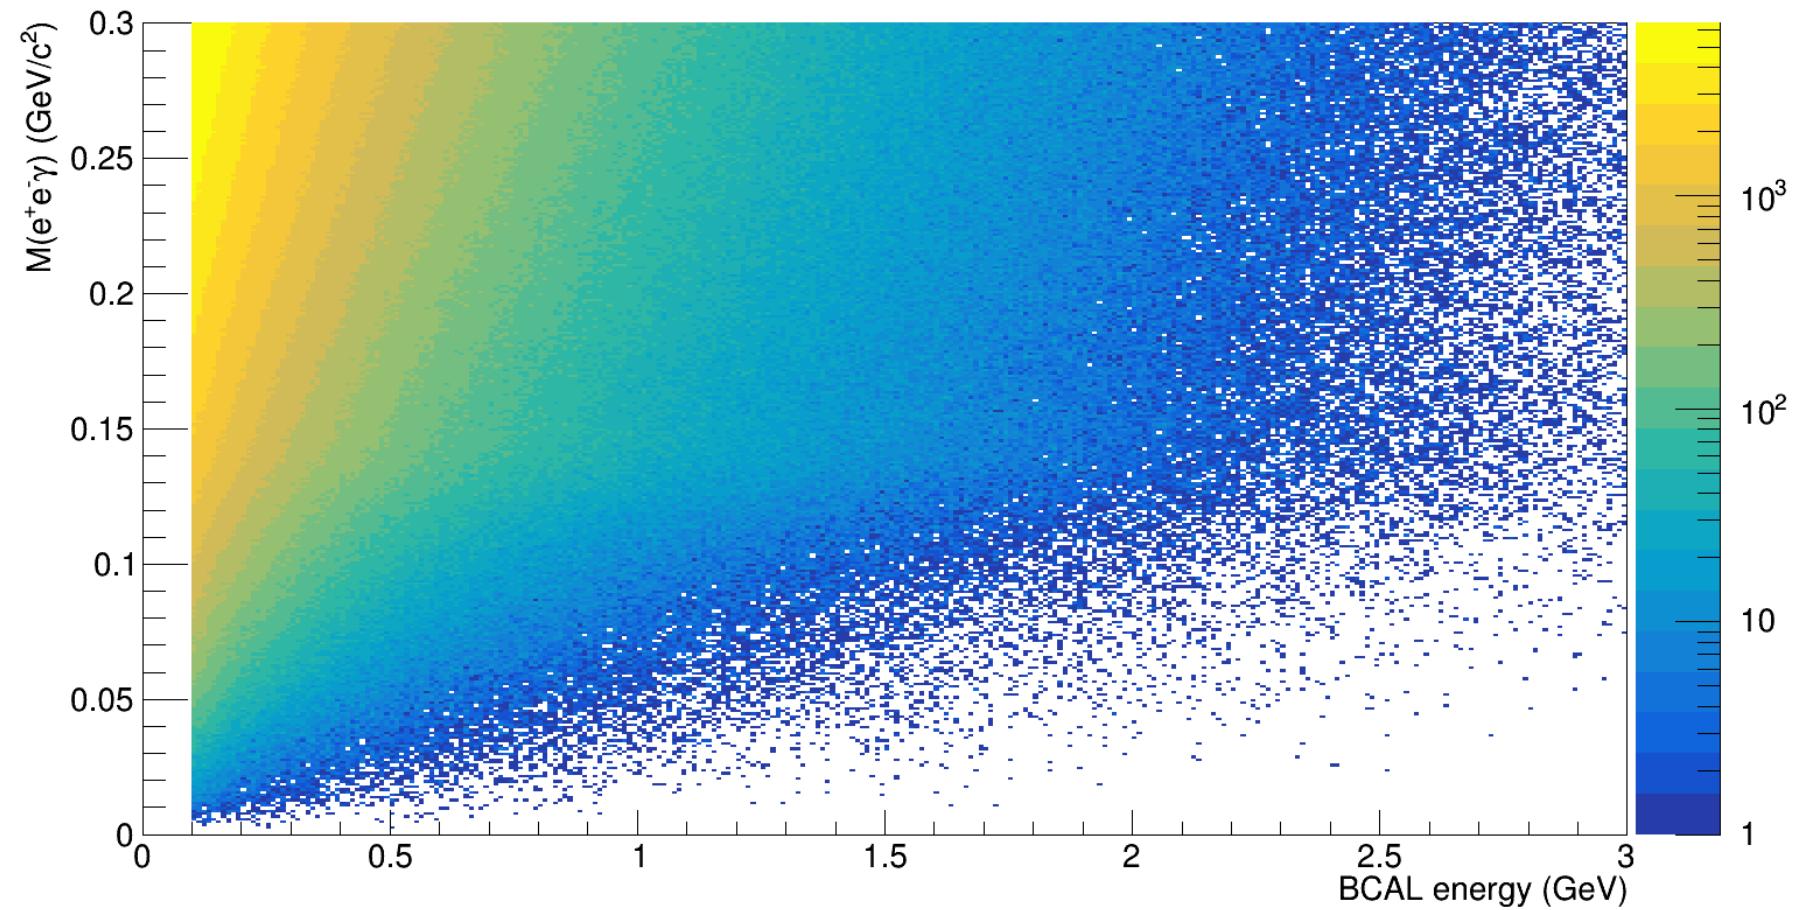

$e^+e^-\gamma$  mass vs BCAL shower energy for  $e^+$

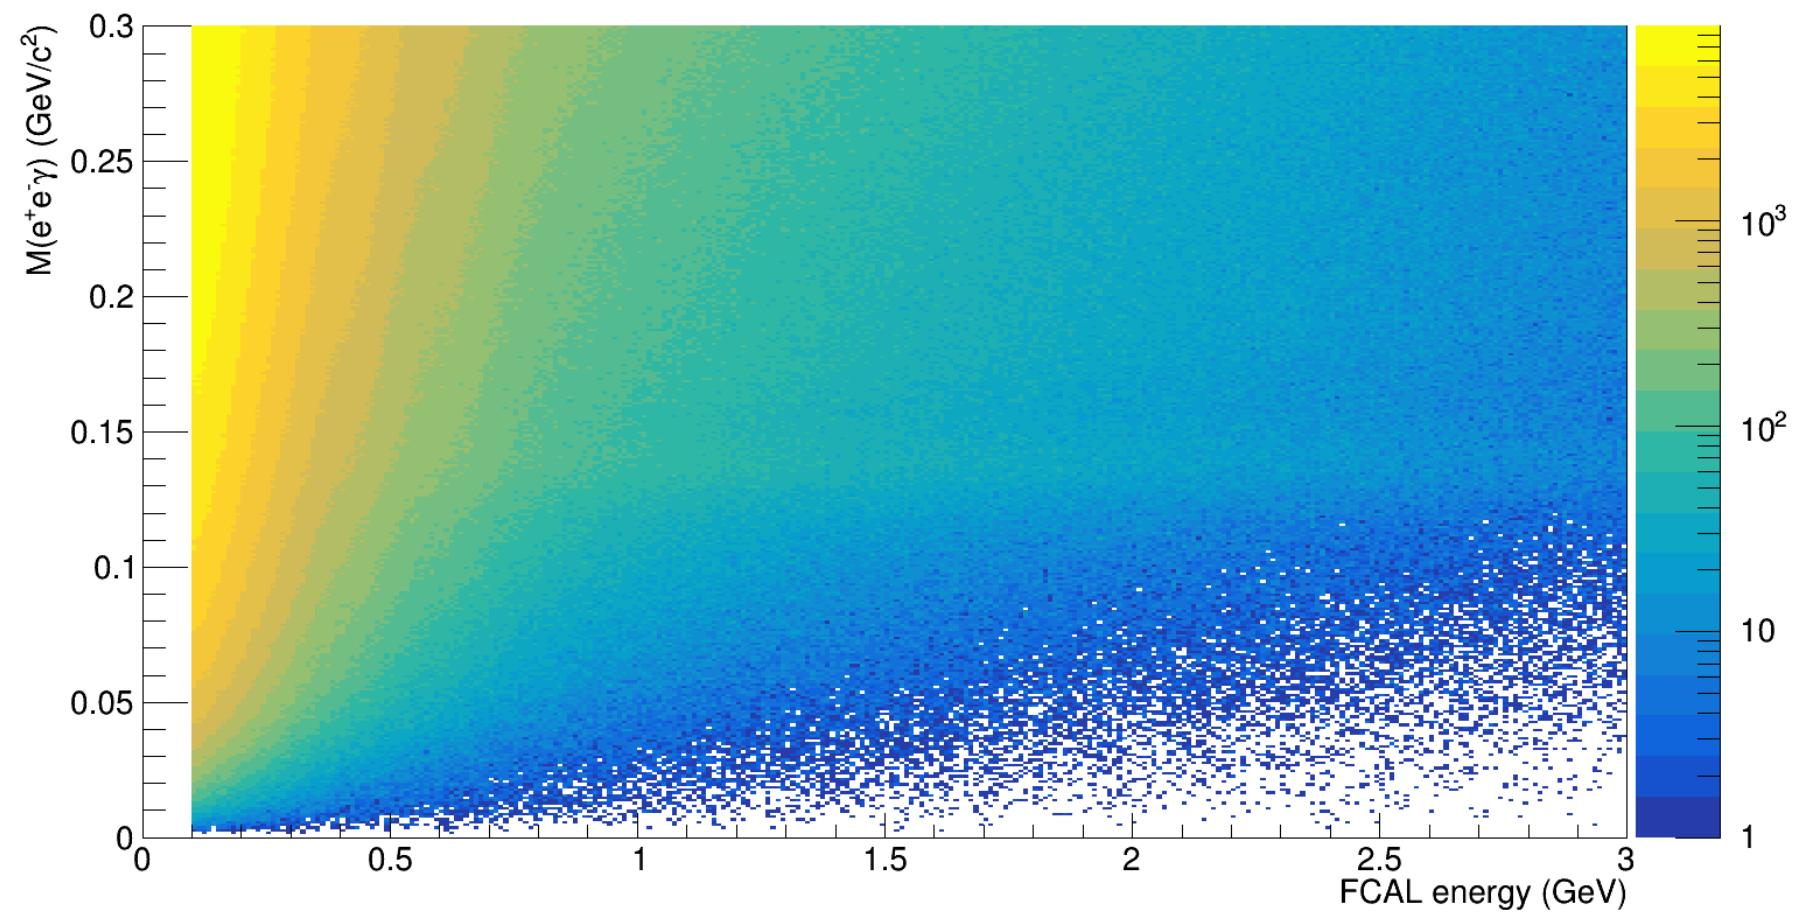

$e^+e^-\gamma$  mass vs FCAL shower energy for  $e^+$

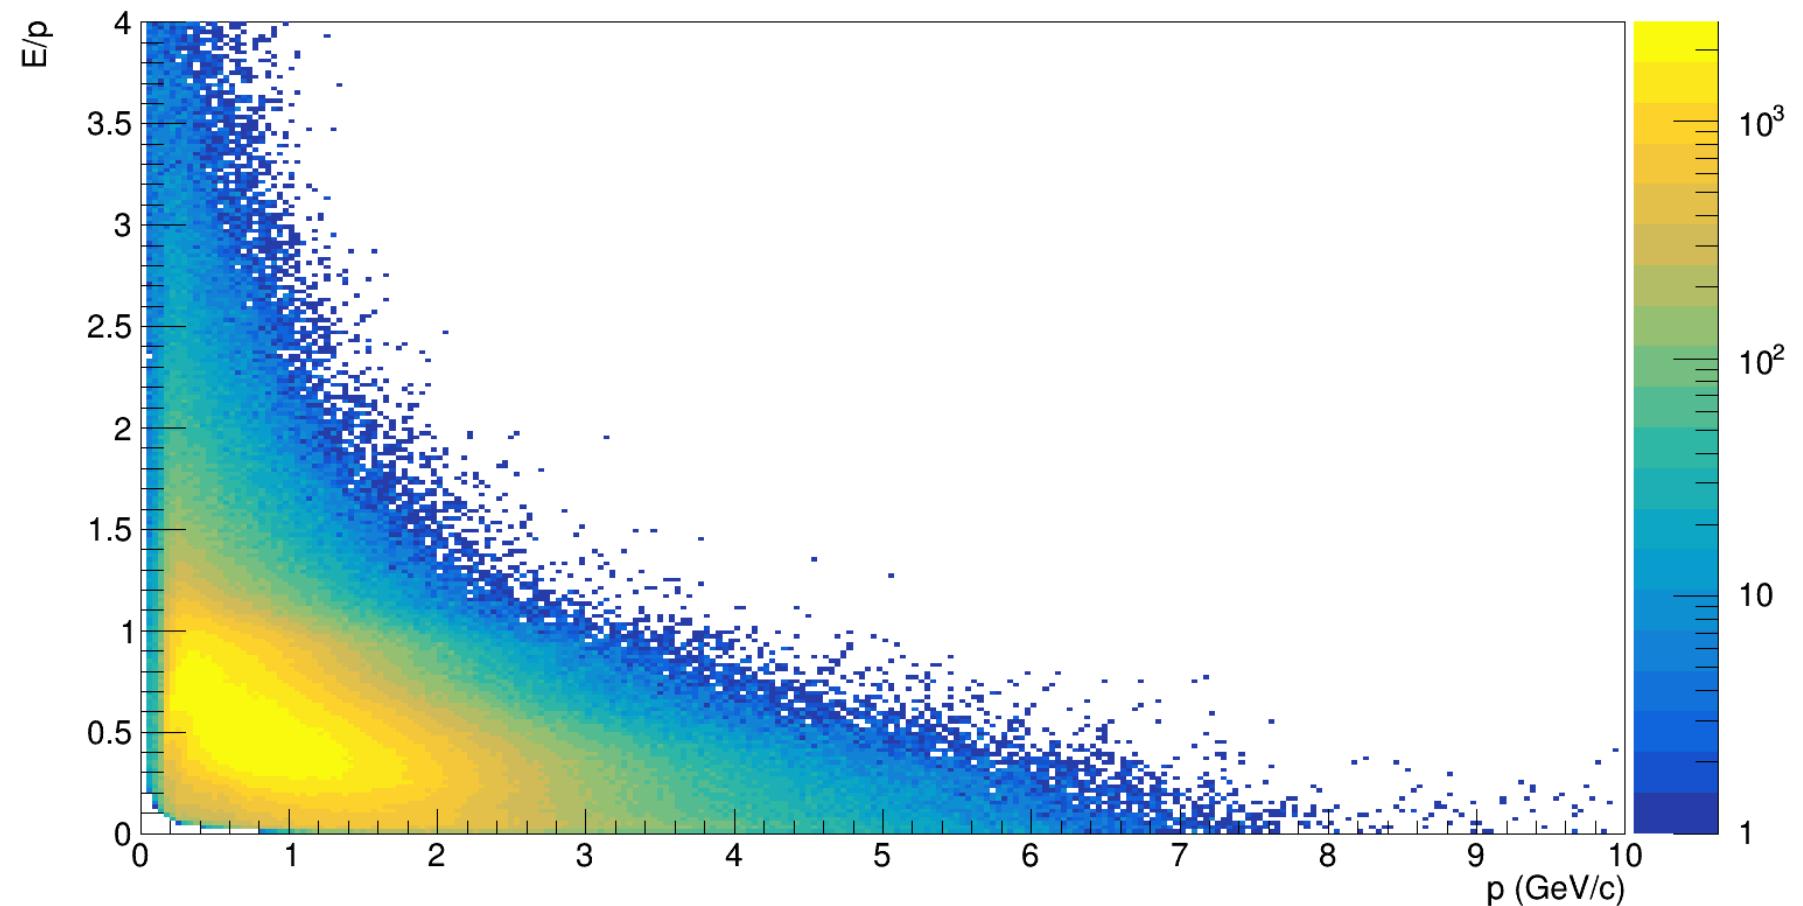

$e^+e^-\gamma$  mass vs BCAL shower energy for  $\gamma$

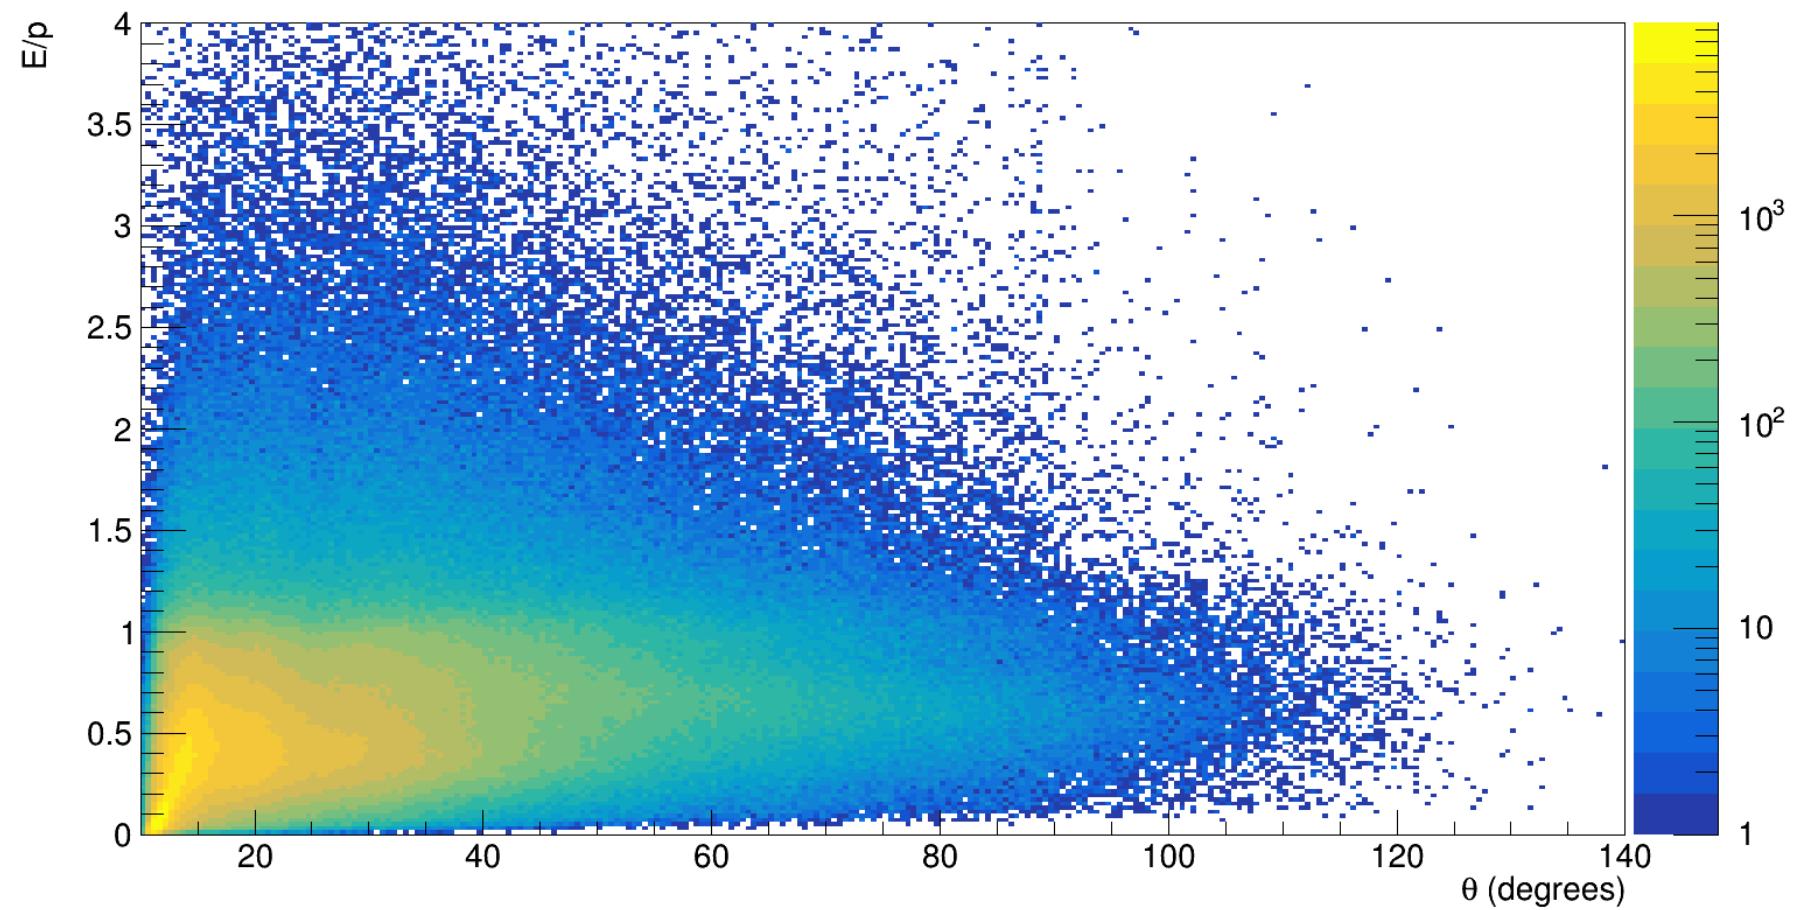

$e^+e^-\gamma$  mass vs FCAL shower energy for  $\gamma$

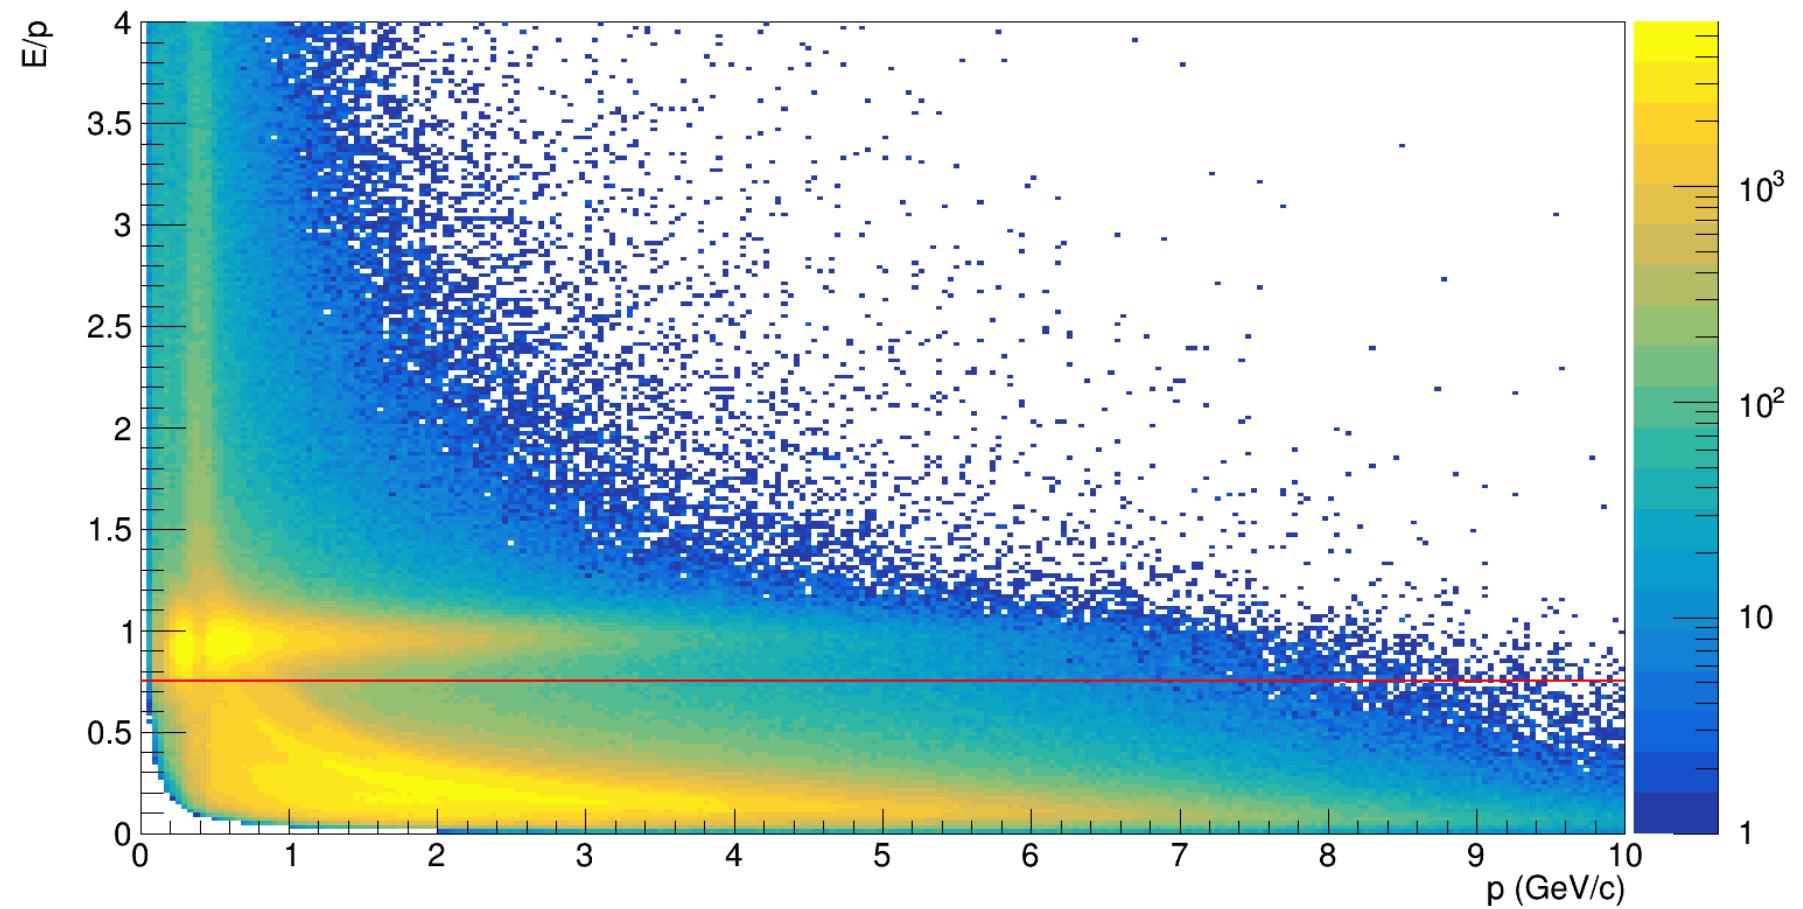

E/p vs p for positrons in BCAL

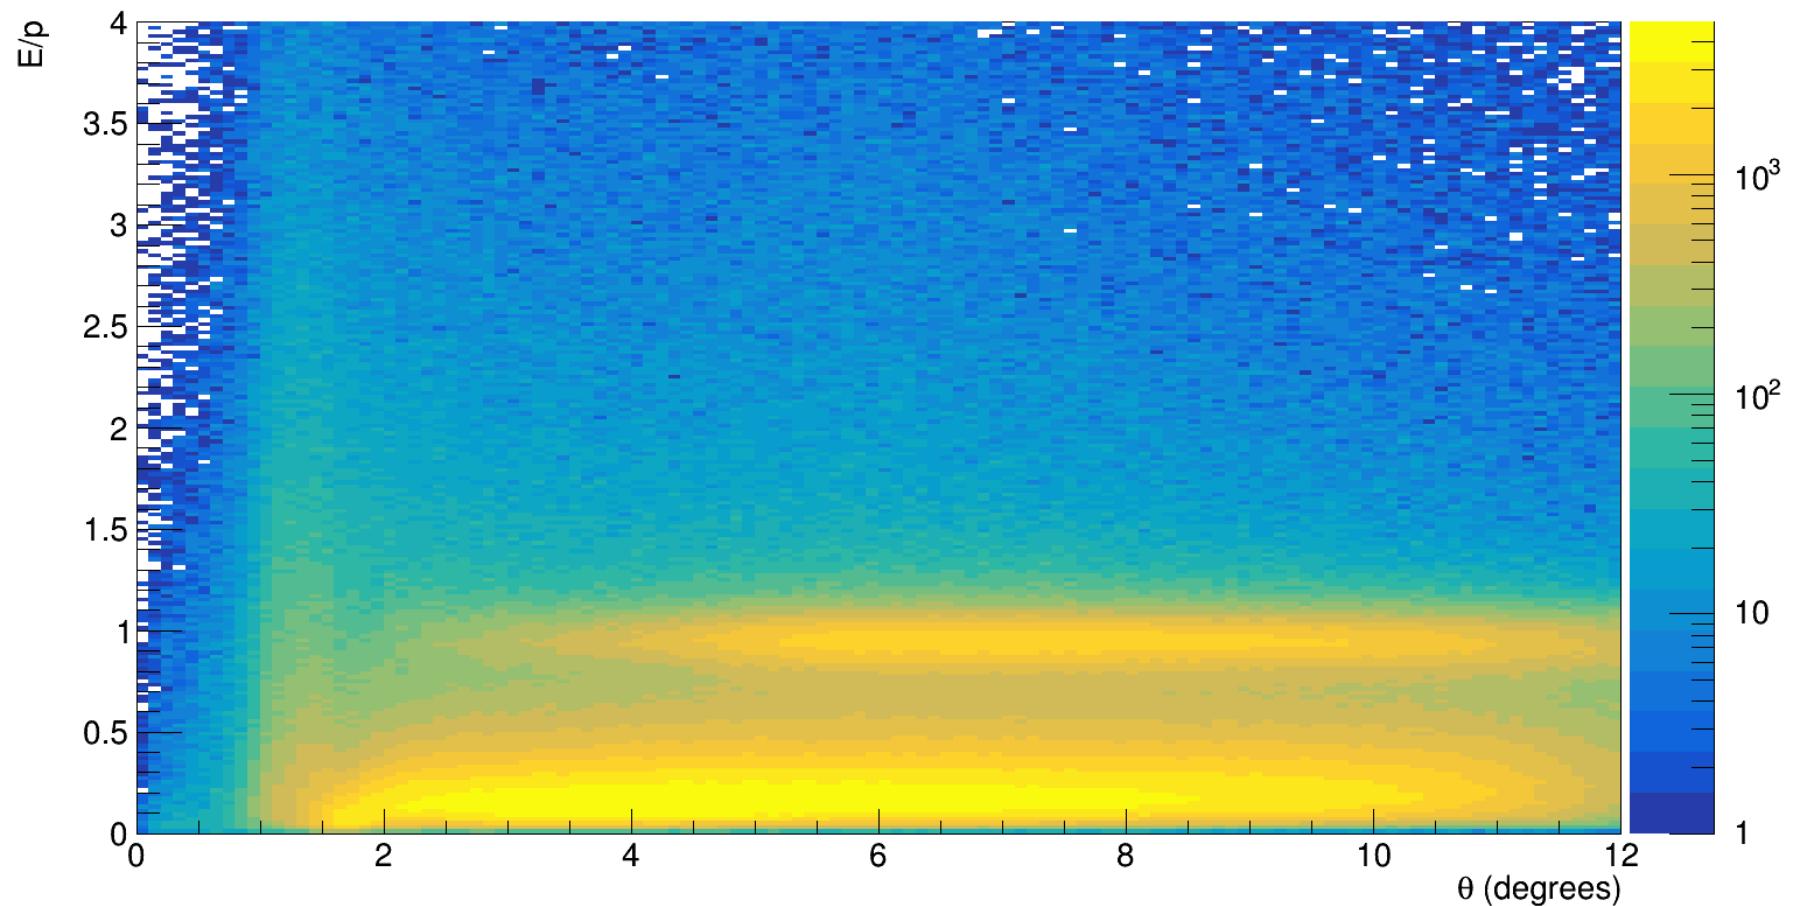

E/p vs  $\theta$  for positrons in BCAL

E/p vs p for positrons in FCAL

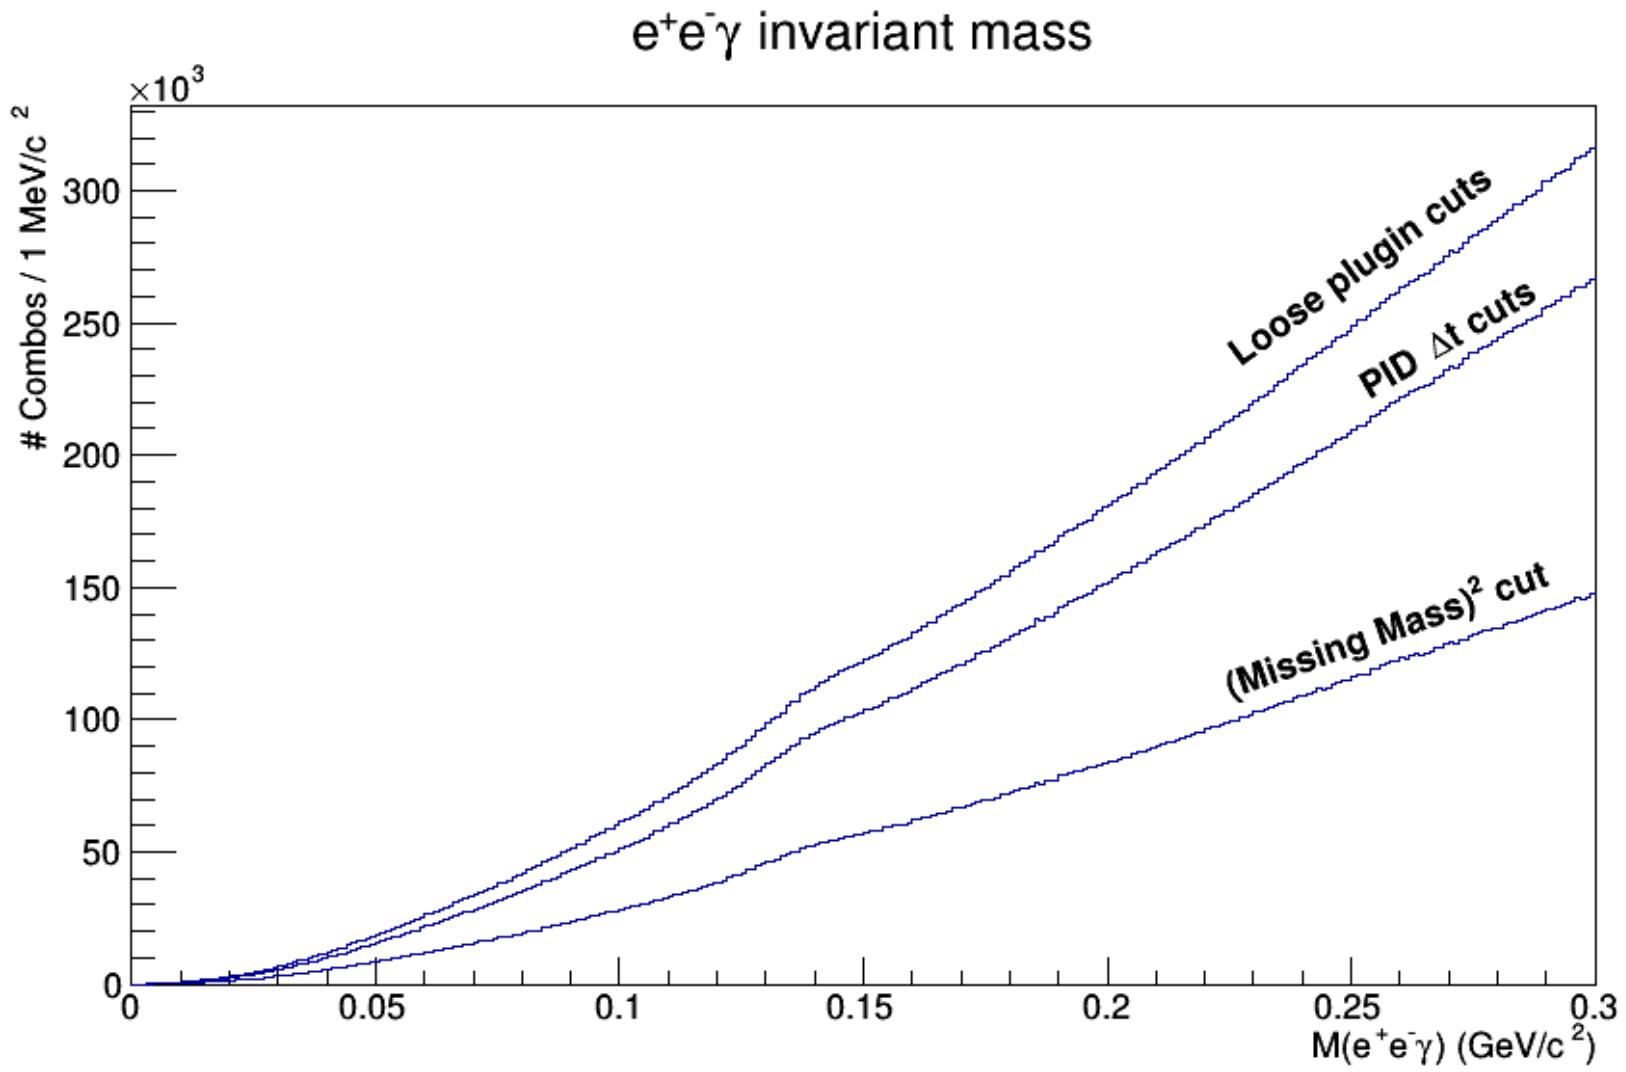

E/p vs  $\theta$  for positrons in FCAL

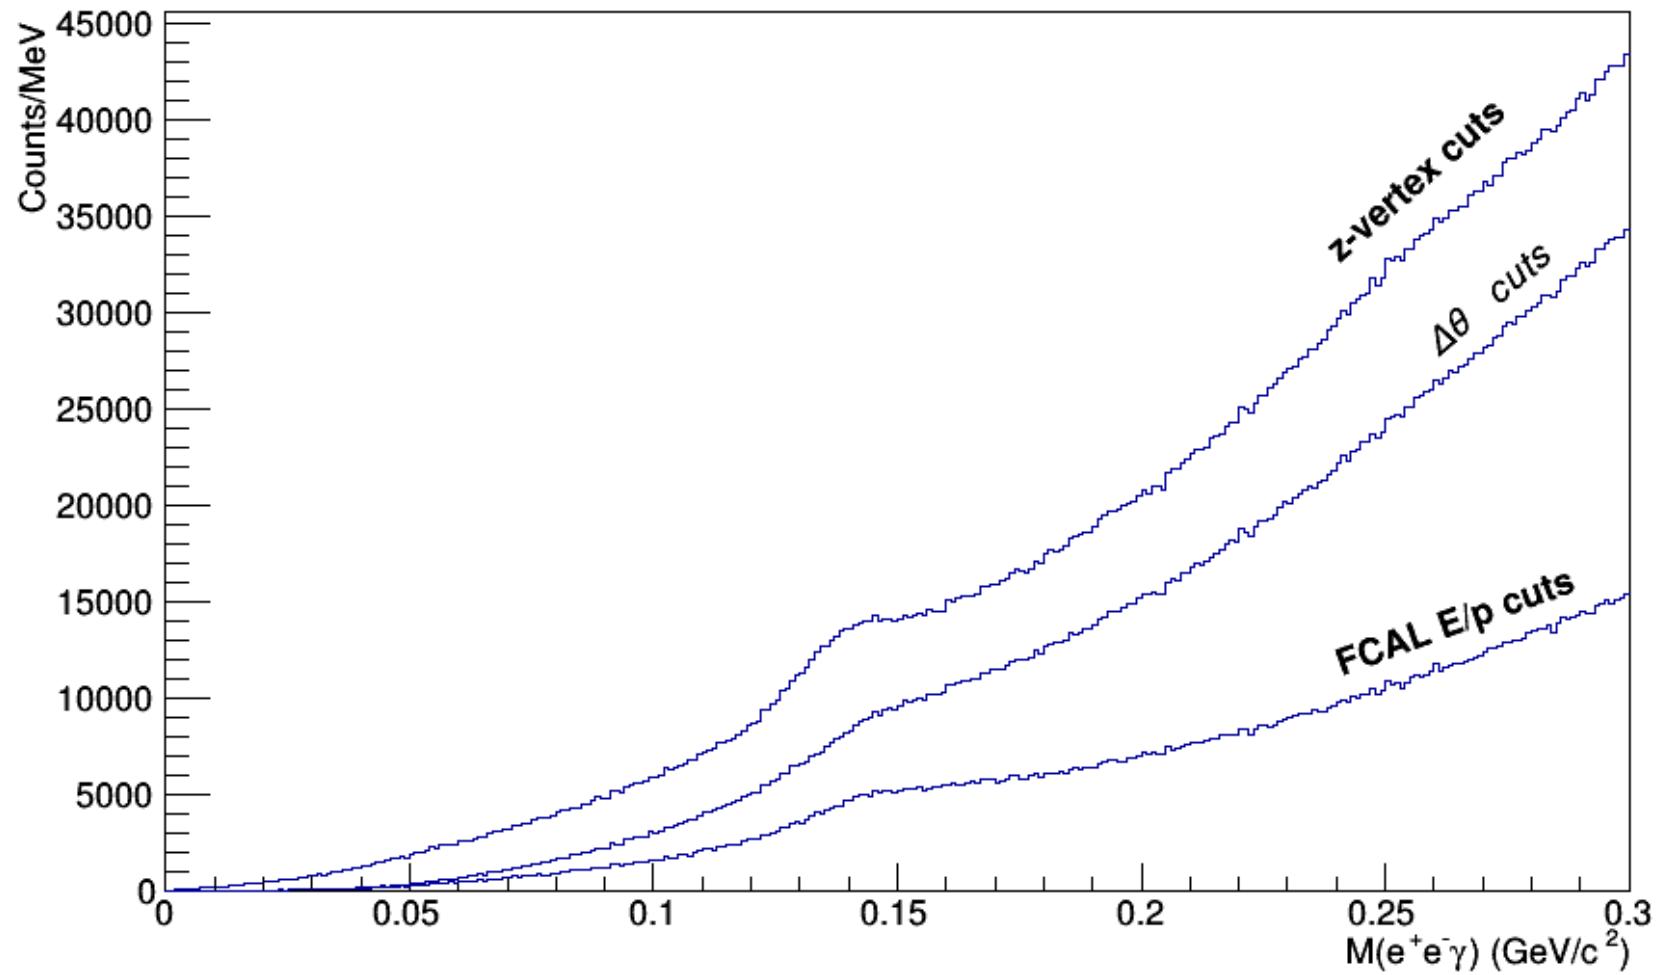

## Further cuts

- PID  $\Delta t$ , protons, TOF:  $\pm 1ns$
- PID  $\Delta t$ , protons, BCAL:  $\pm 1.5ns$
- PID  $\Delta t$ , positrons, TOF:  $\pm 0.6ns$
- PID  $\Delta t$ , positrons, BCAL:  $\pm 1.5ns$
- PID  $\Delta t$ , electrons, TOF:  $\pm 0.6ns$
- PID  $\Delta t$ , electrons, BCAL:  $\pm 1.5ns$
- $(MissingMass)^2$  cut:  $[-0.05, 0.05] \left(\frac{GeV}{c^2}\right)^2$
- z-vertex proton/positron/electron cut:  $[48, 80]$  cm
  - $\Delta\theta(e^+e^-) > 2^\circ$
  - $\Delta\theta(e^+\gamma) > 2^\circ$
  - $\Delta\theta(e^-\gamma) > 2^\circ$
  - $\Delta\theta(e^+e^-, \gamma) > 2^\circ$
- FCAL  $\frac{E}{p} > 0.75$  for positrons
- FCAL  $\frac{E}{p} > 0.75$  for electrons

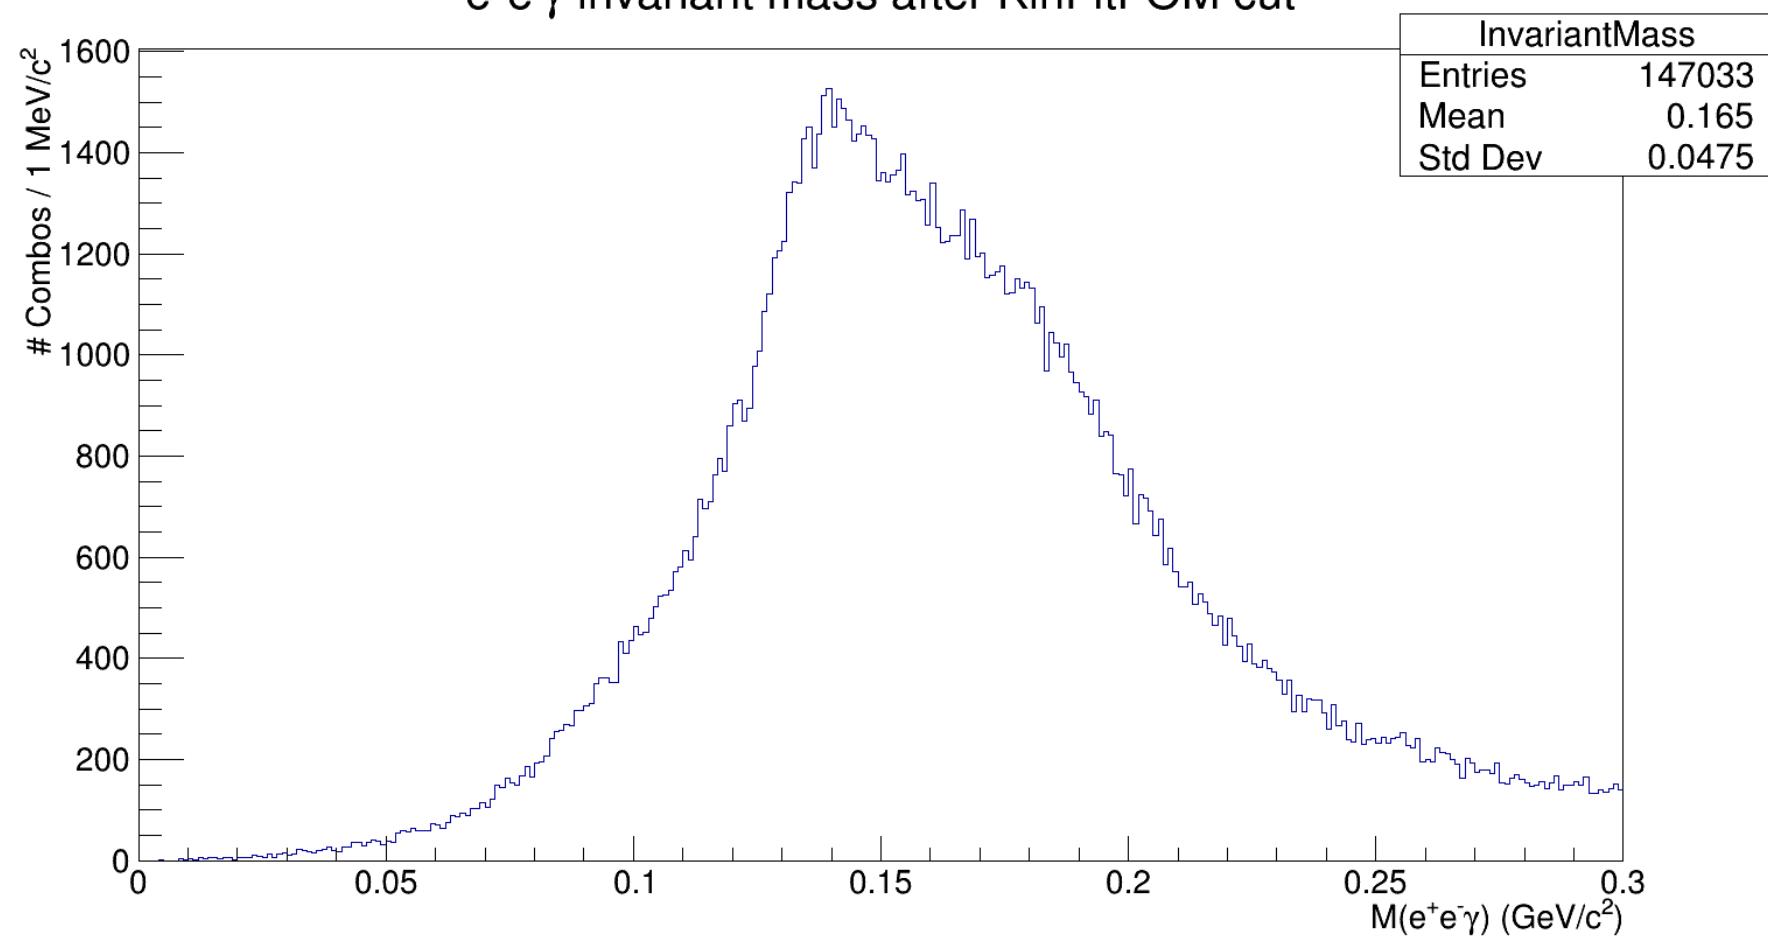

### $e^+e^-\gamma$ invariant mass

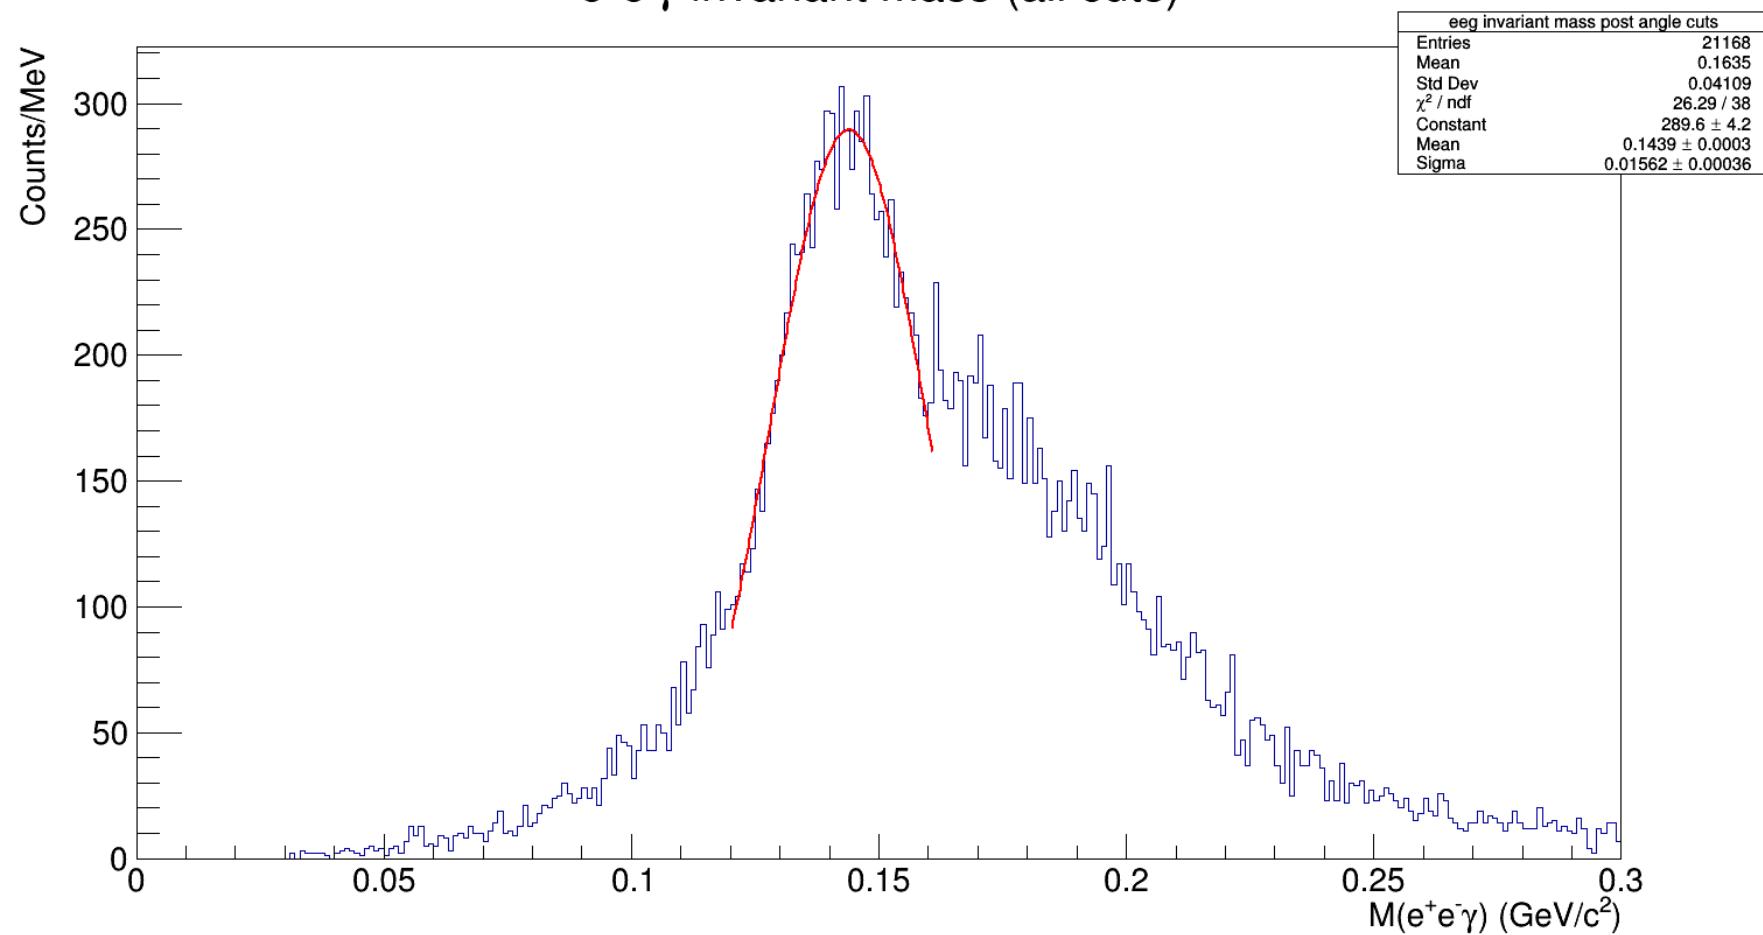

## Final cut selection

- Add KinFitFOM(0.0) cut (kinematic fit convergence)
  - Include all aforementioned cuts
- Tighten  $(\text{MissingMass})^2$  cut:  $[-0.03, 0.03]$   $(\frac{\text{GeV}}{c^2})^2$ 
  - Tighten all  $\Delta\theta$  cuts:  $\Delta\theta > 1^\circ$

### $e^+e^-\gamma$ invariant mass after KinFitFOM cut

### $e^+e^-\gamma$ invariant mass (all cuts)

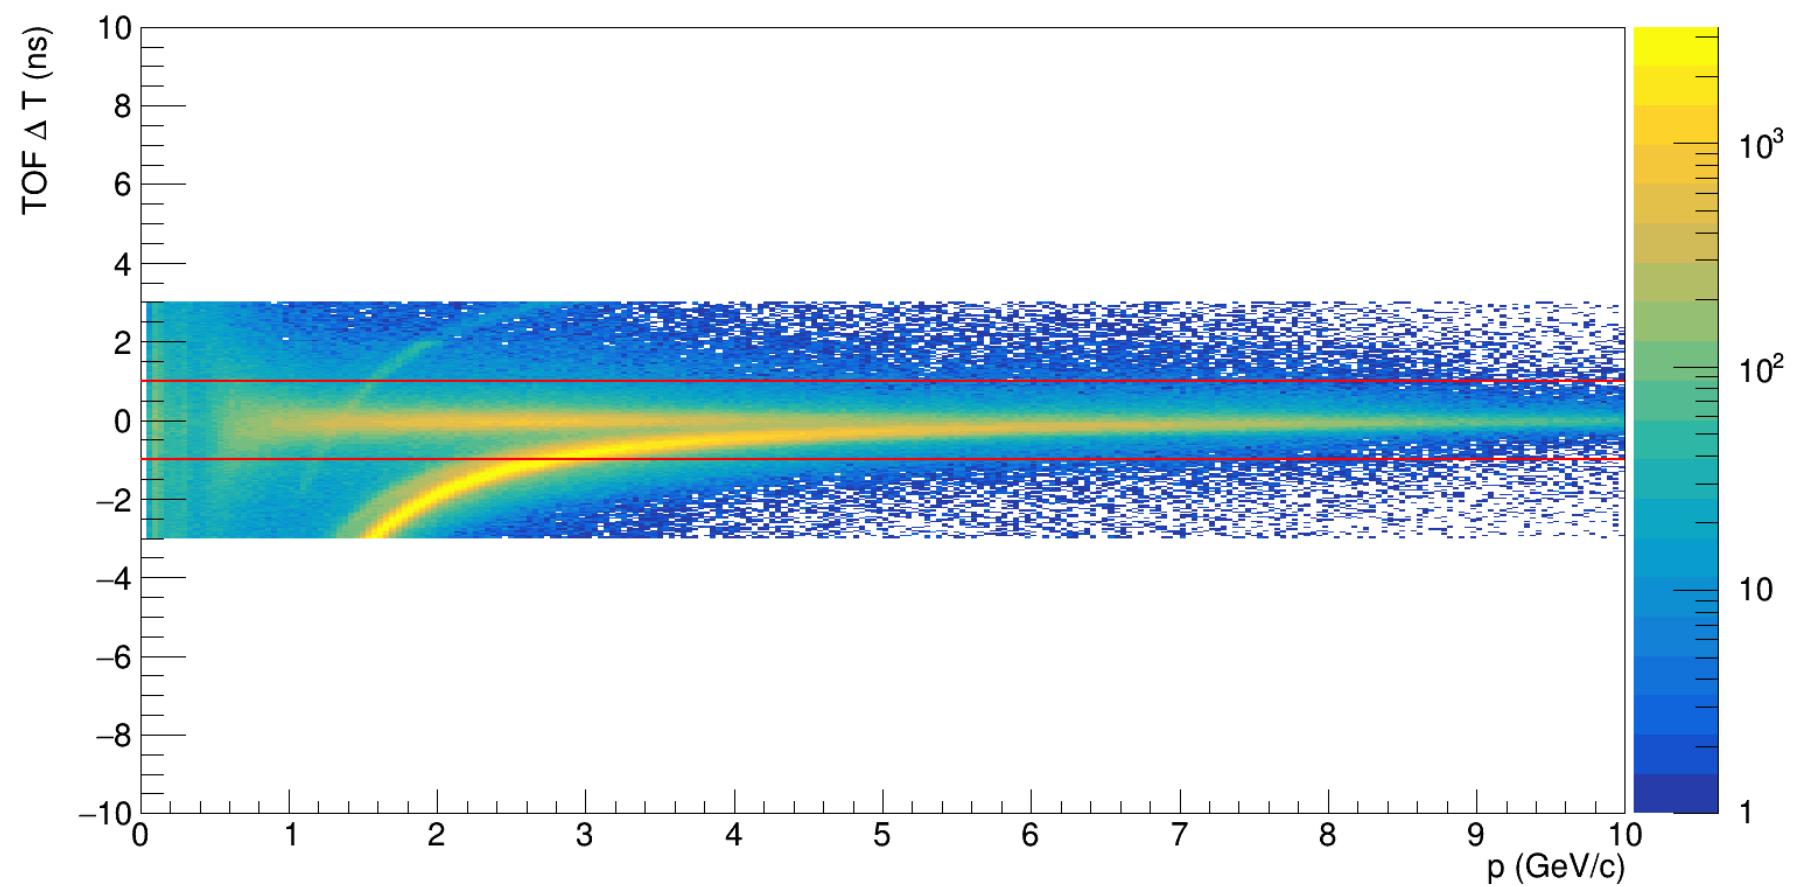

## To Do:

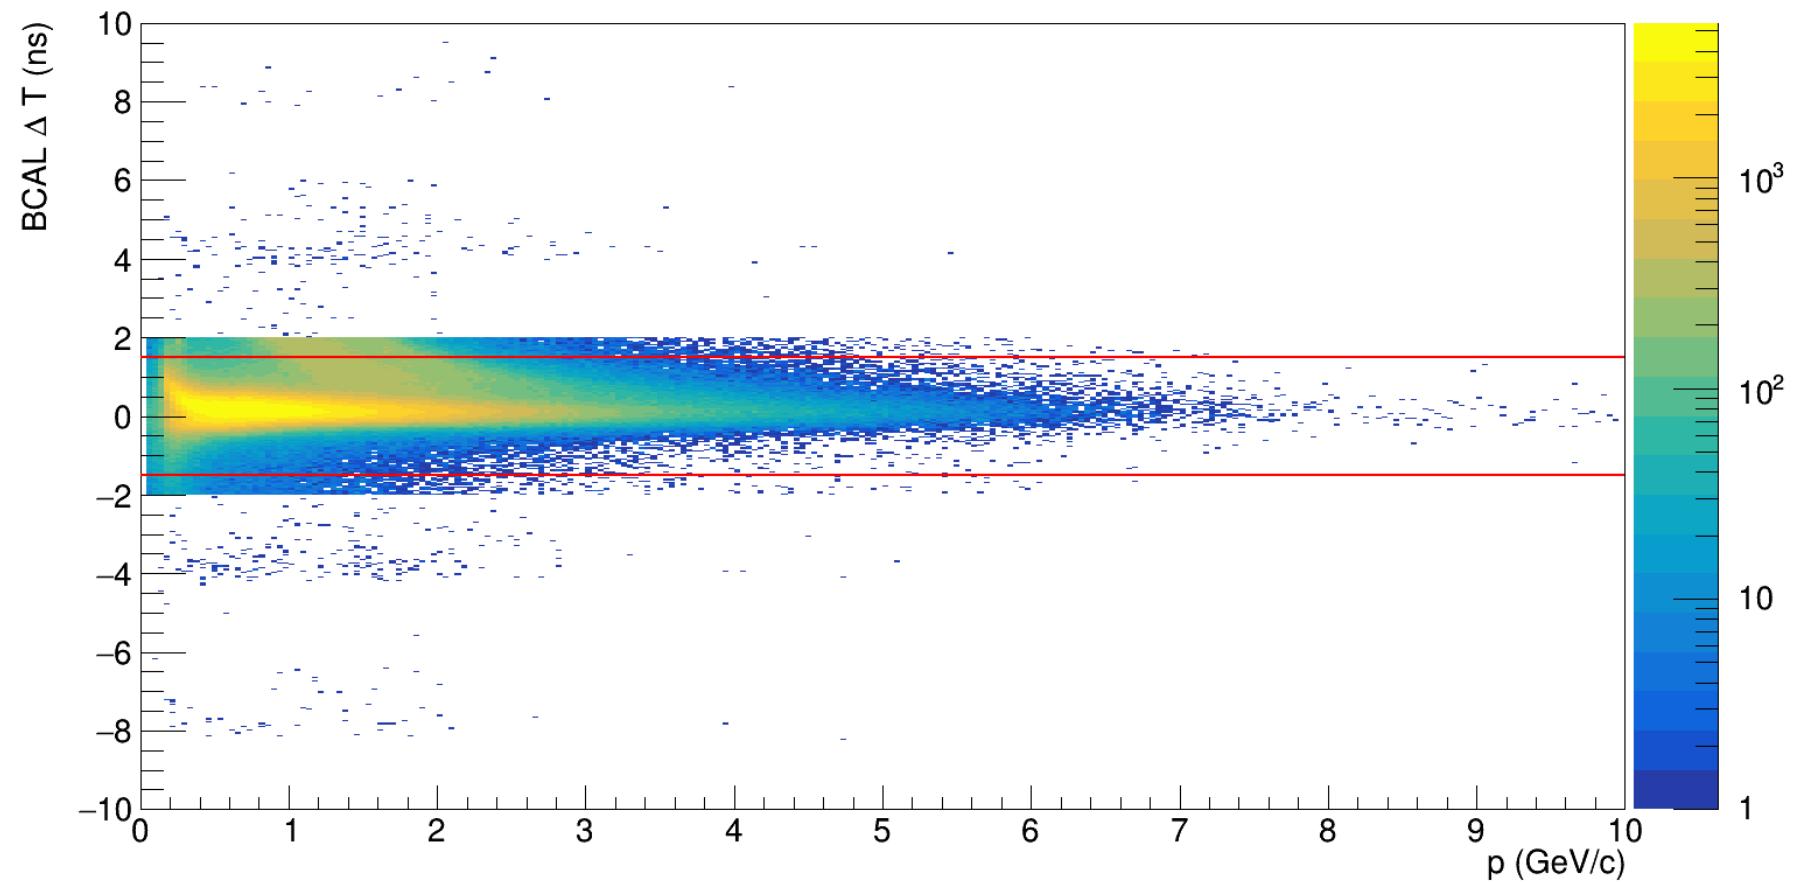

- Add more cuts / Improve current cuts
- Run over the full Spring 2016 dataset if needed
- Determine the energy resolution using the single photon from  
 $\pi^0 \rightarrow e^+ e^- \gamma$

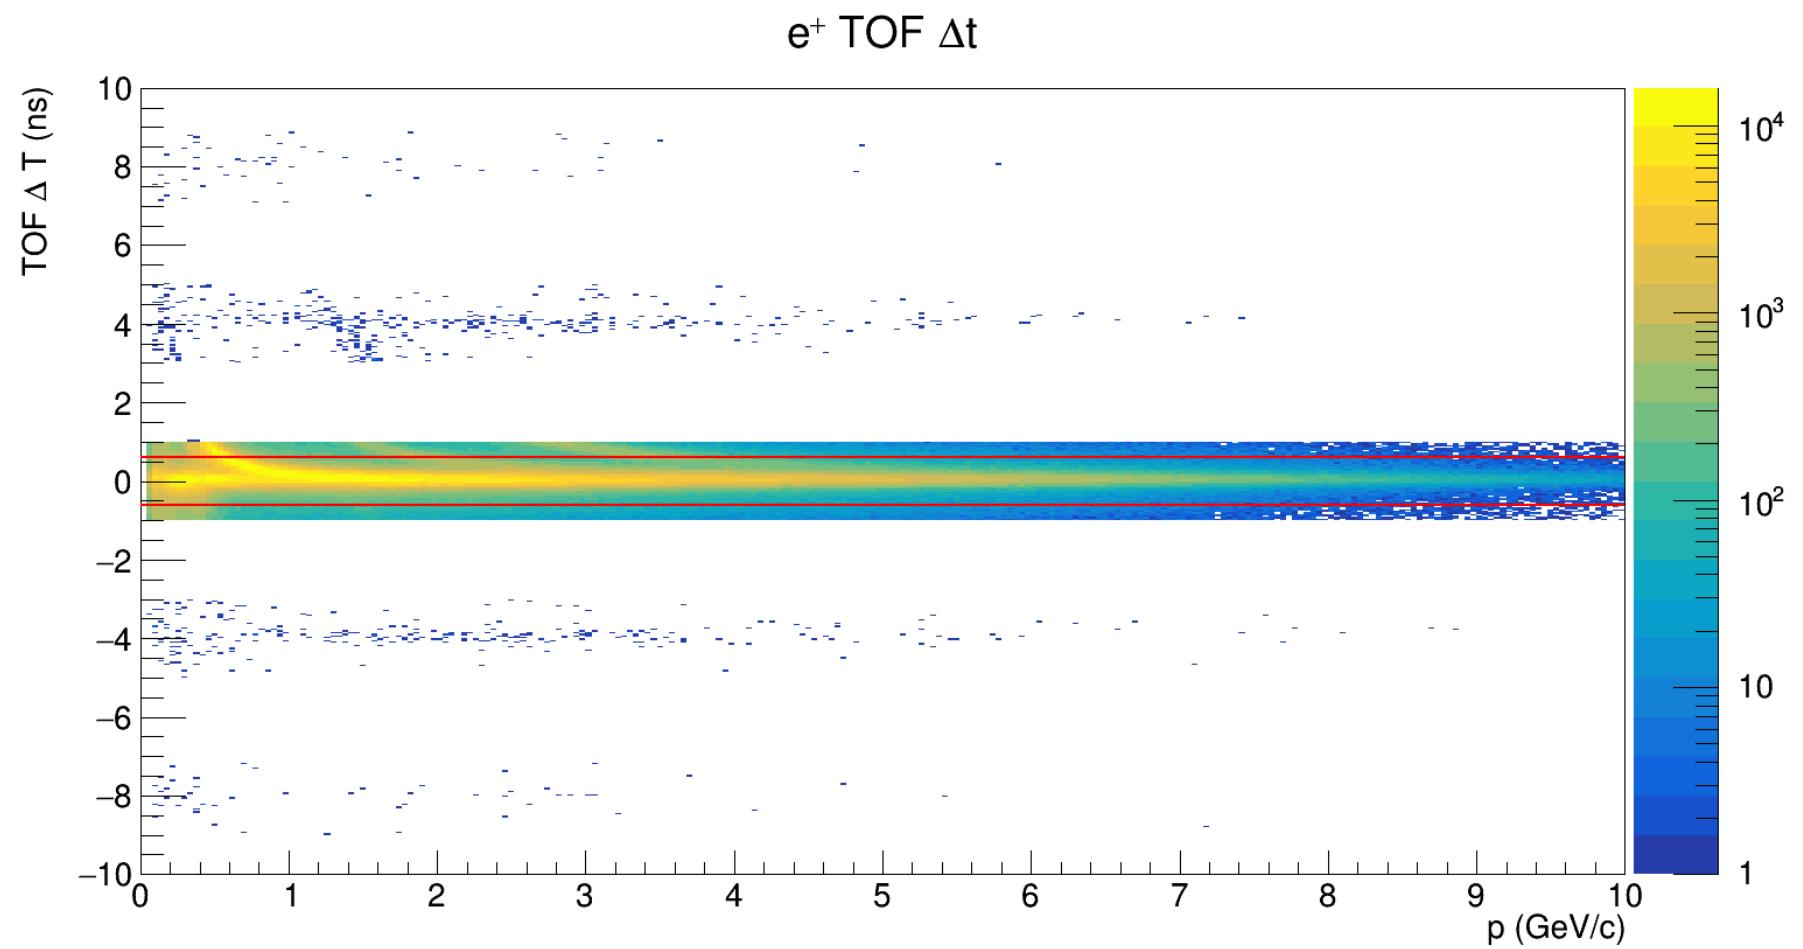

## Back Up Slides

proton TOF  $\Delta t$

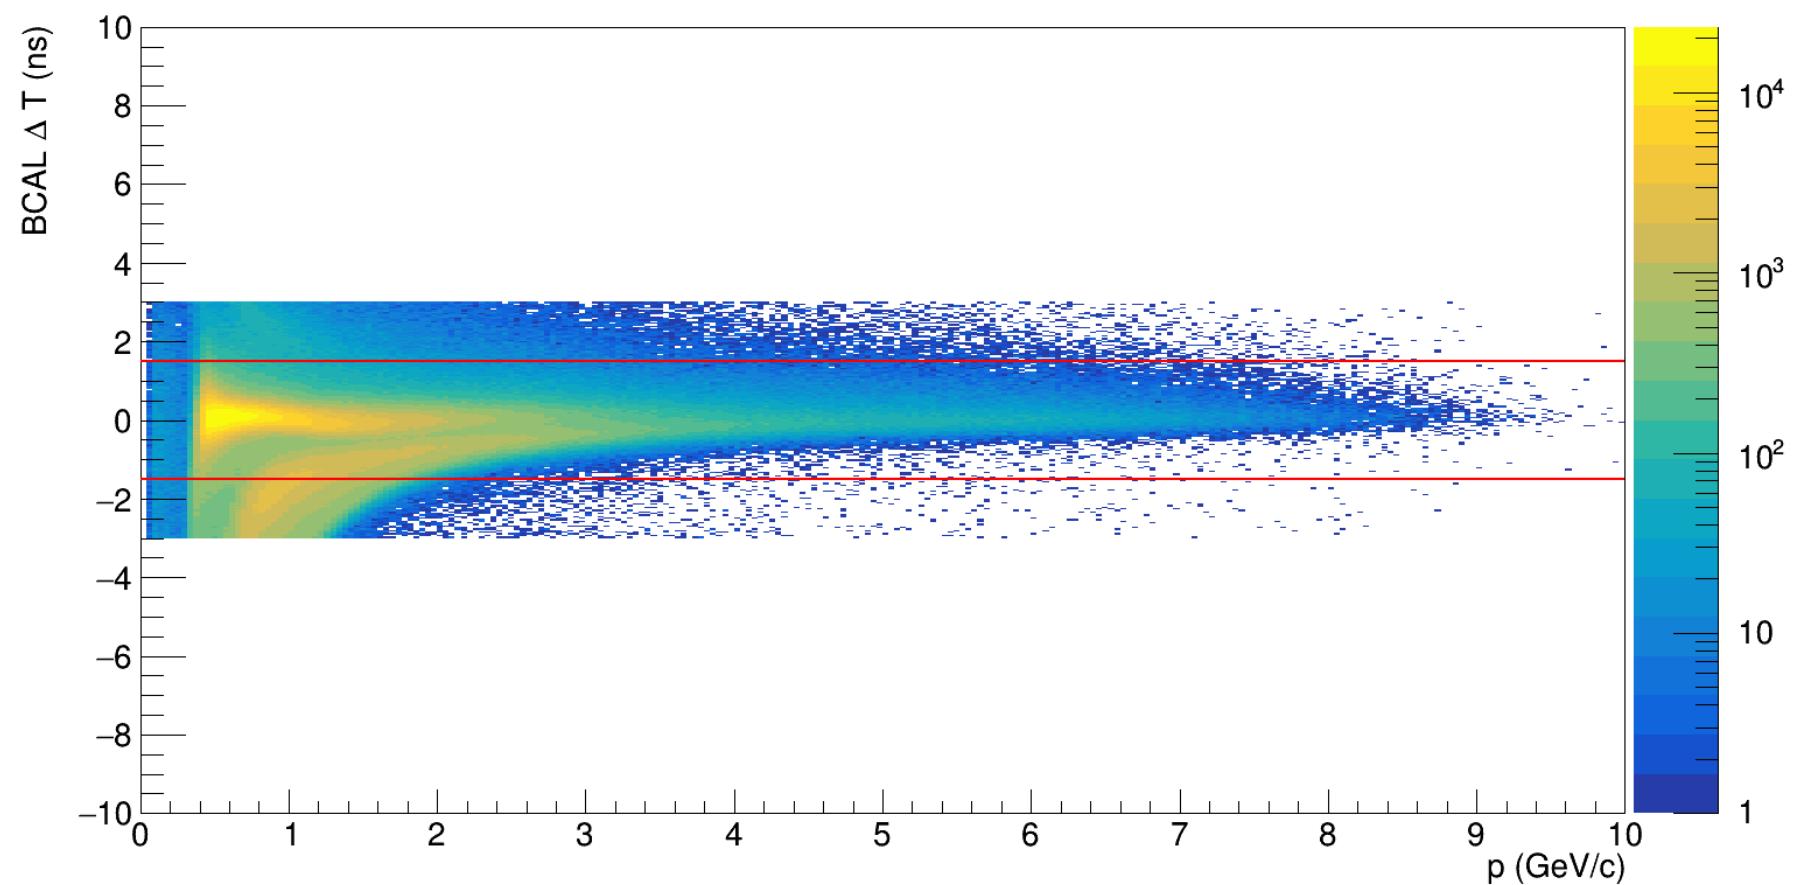

$e^+$  BCAL  $\Delta t$

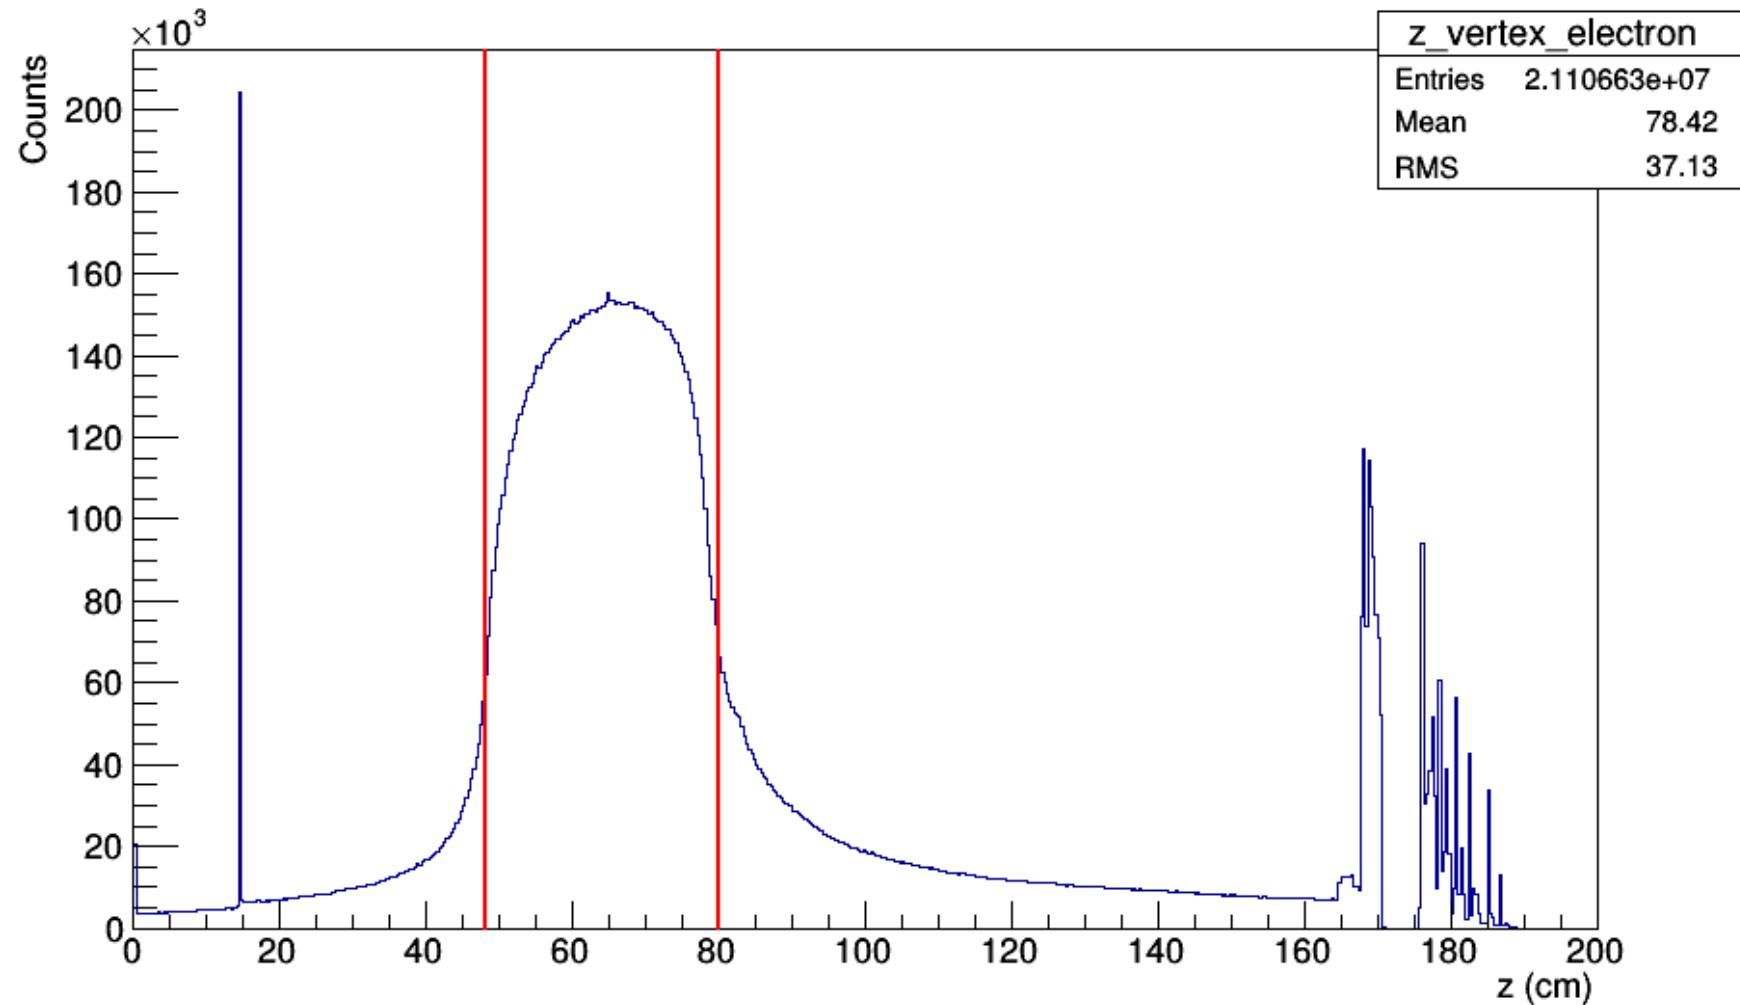

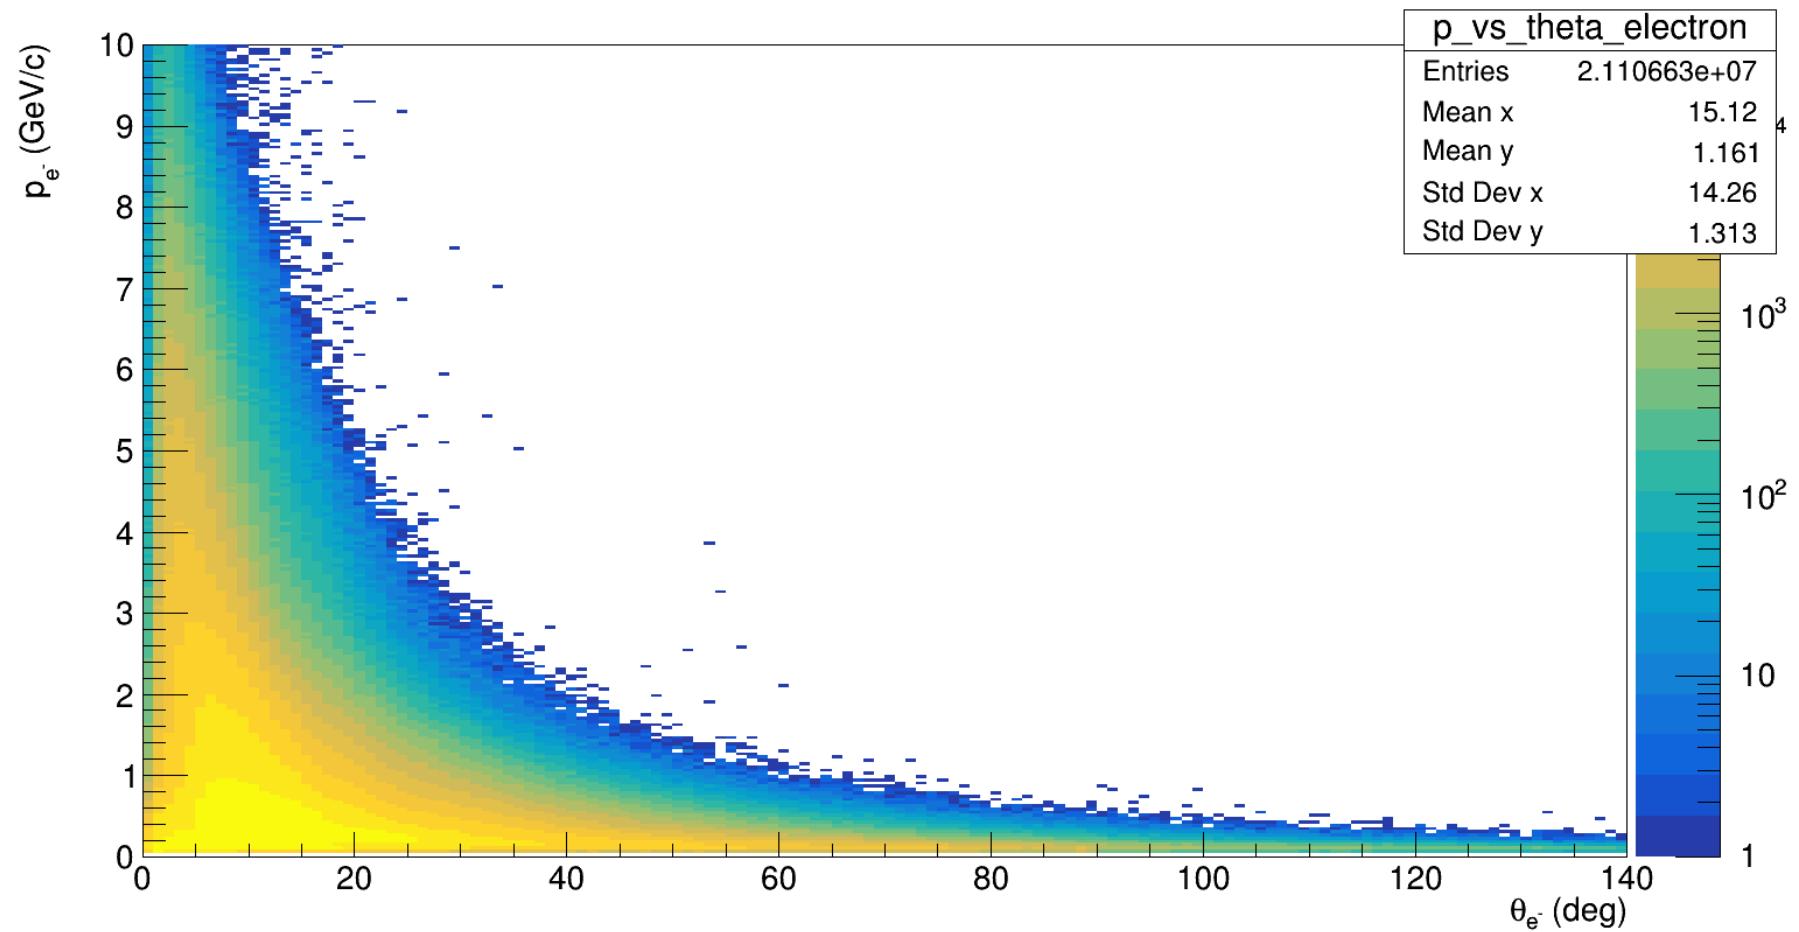

proton BCAL  $\Delta t$

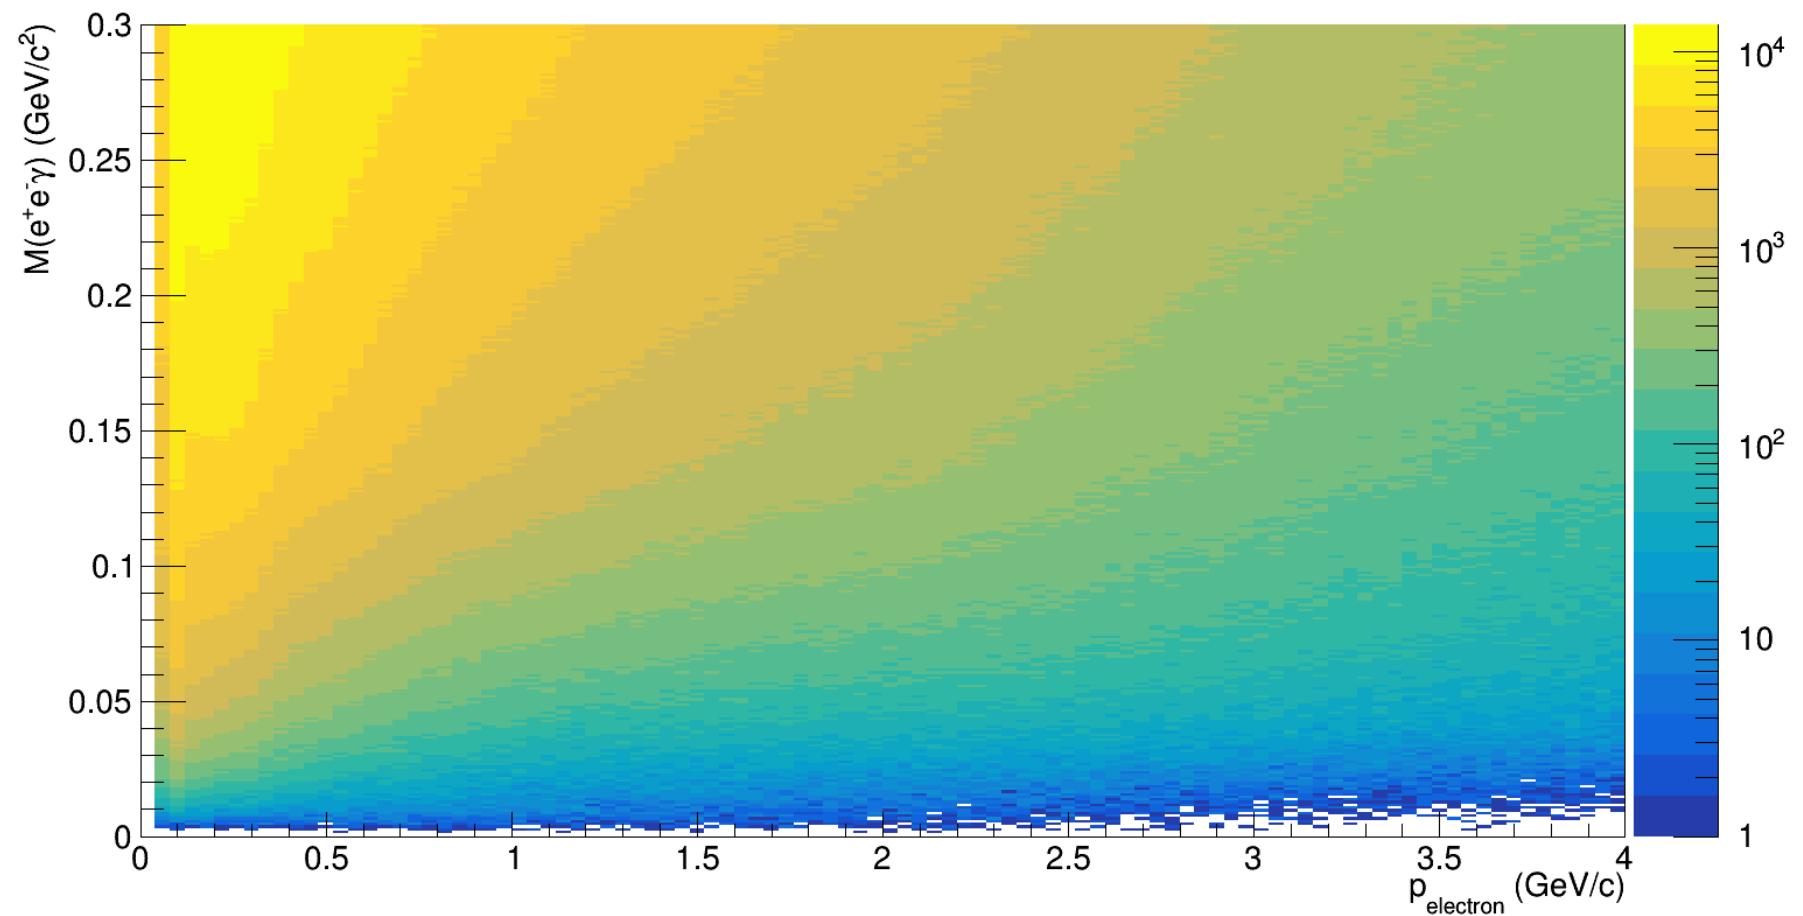

### Electron-vertex z-coordinate

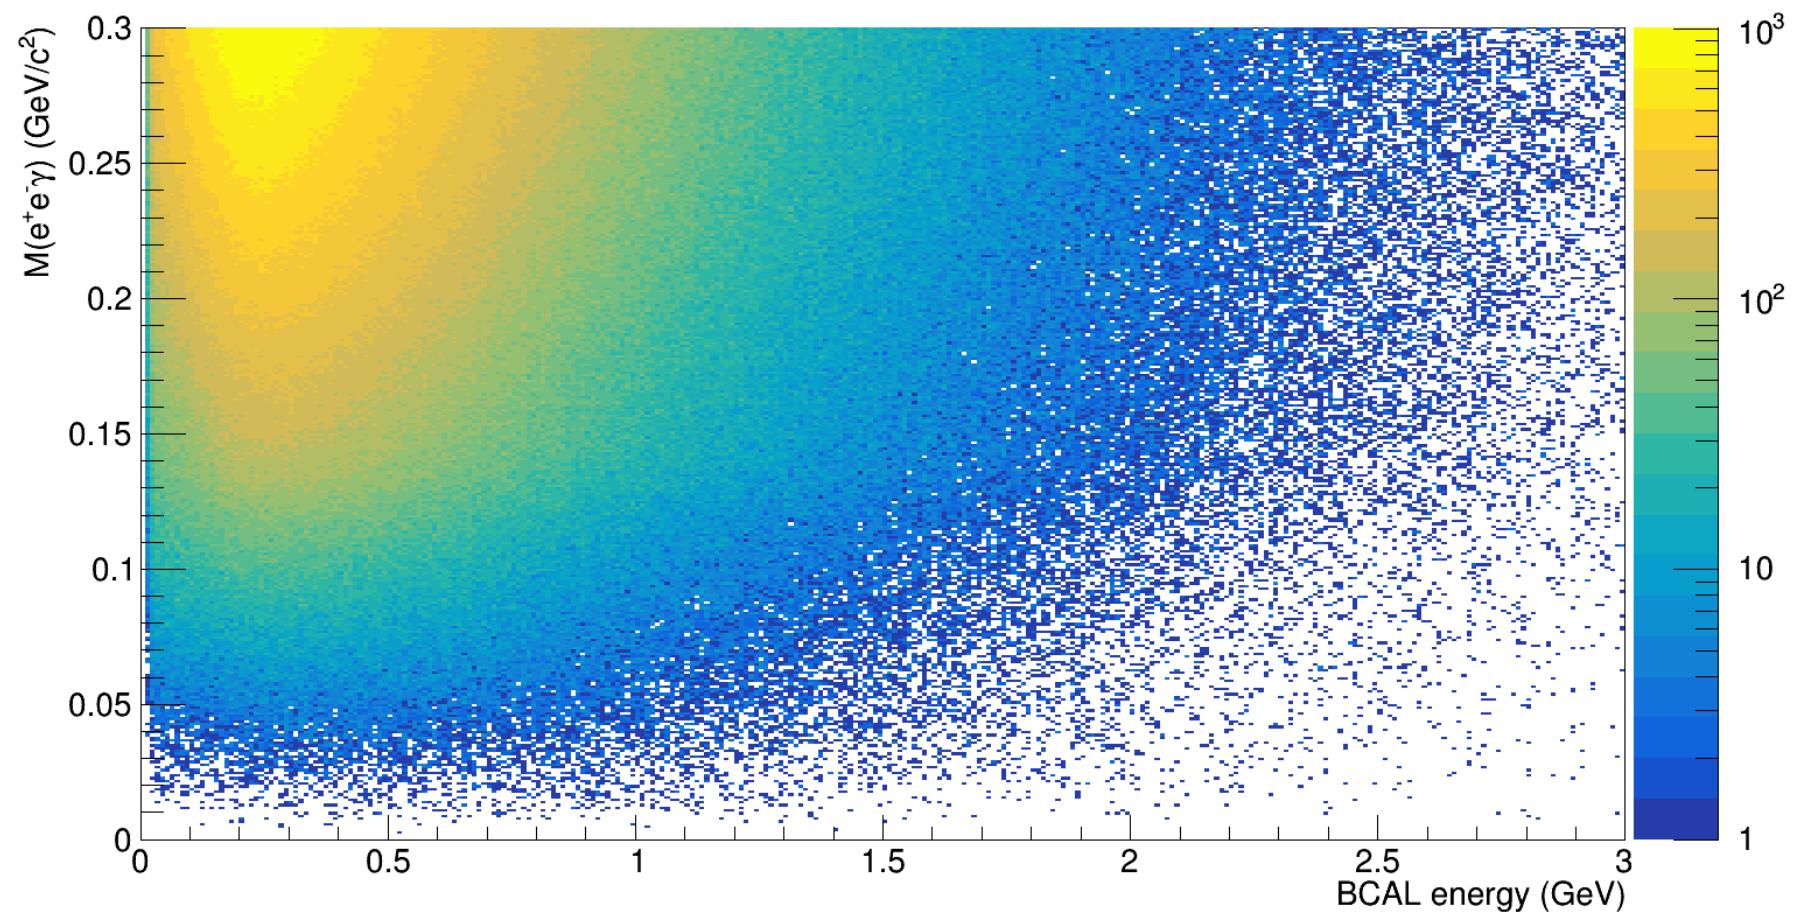

electron momentum vs  $\theta$

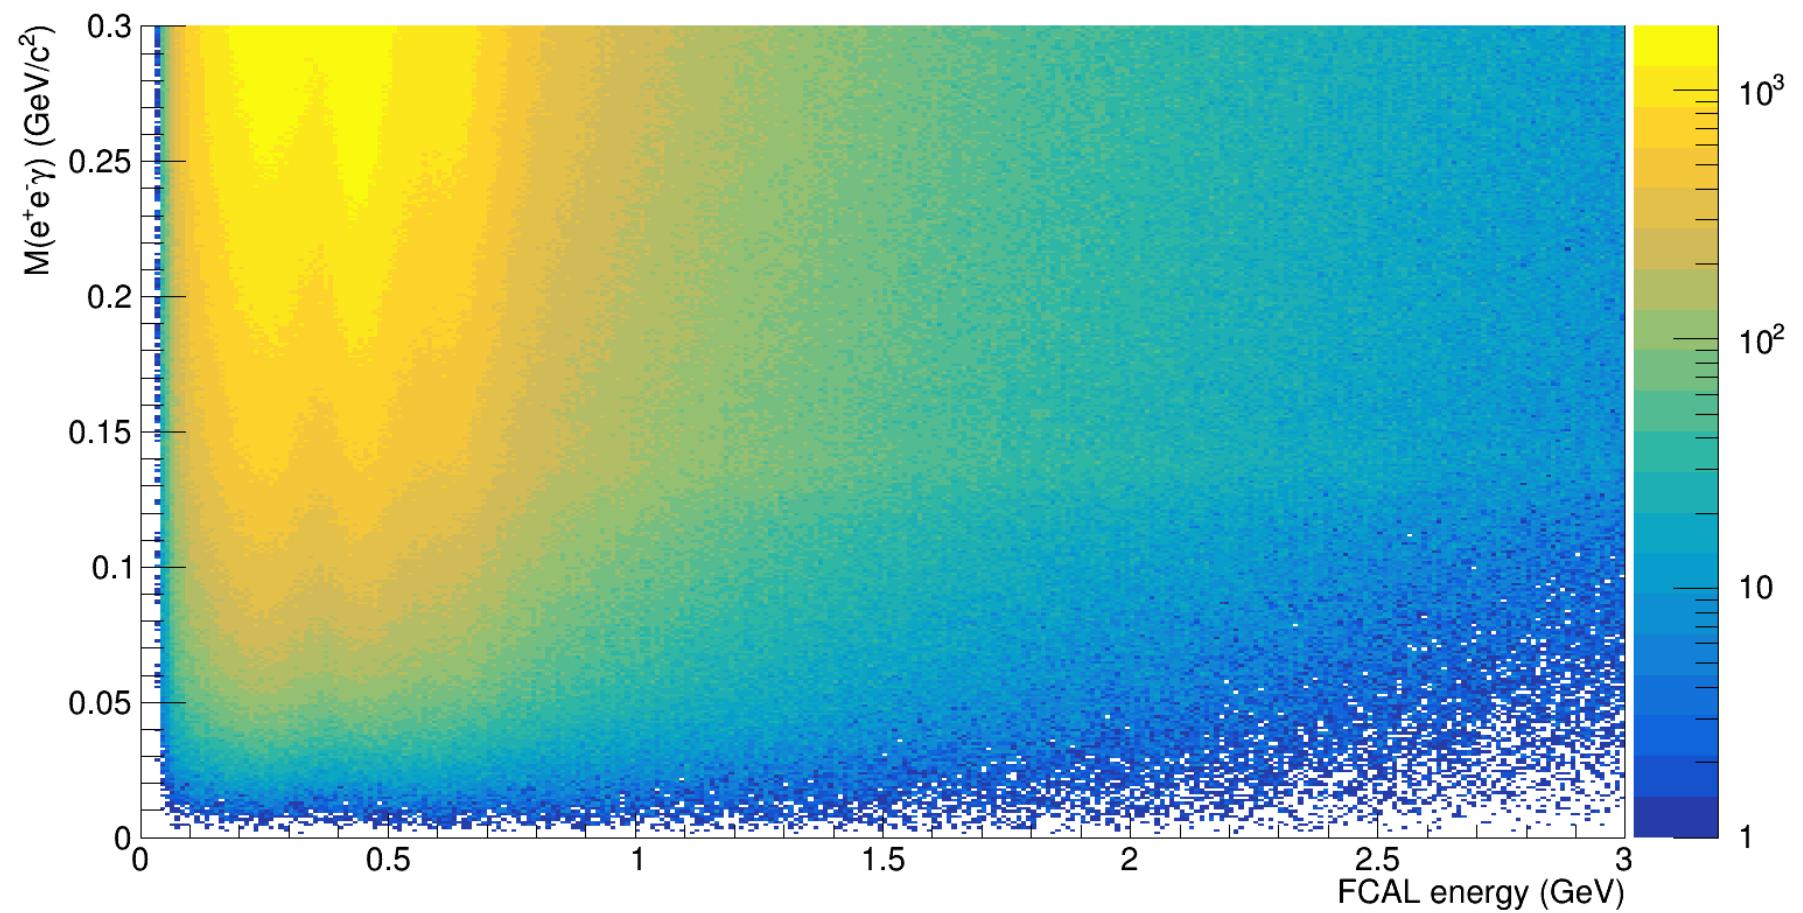

$e^+e^-\gamma$  mass vs electron momentum

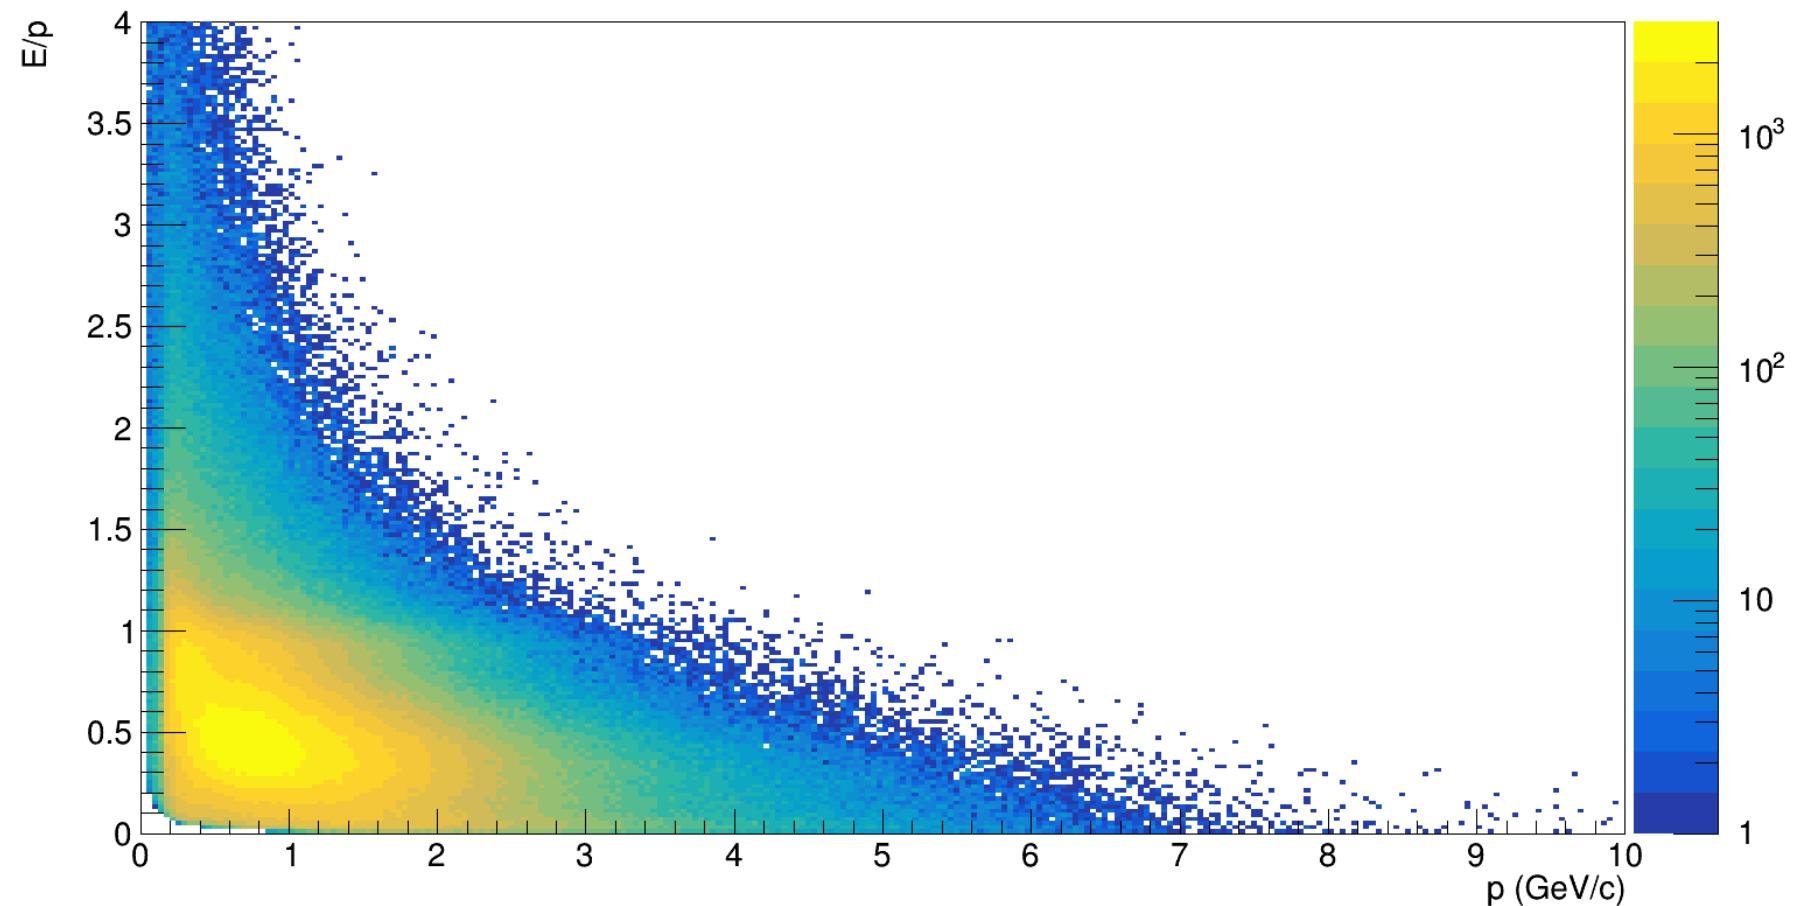

$e^+e^-\gamma$  mass vs BCAL shower energy for  $e^-$

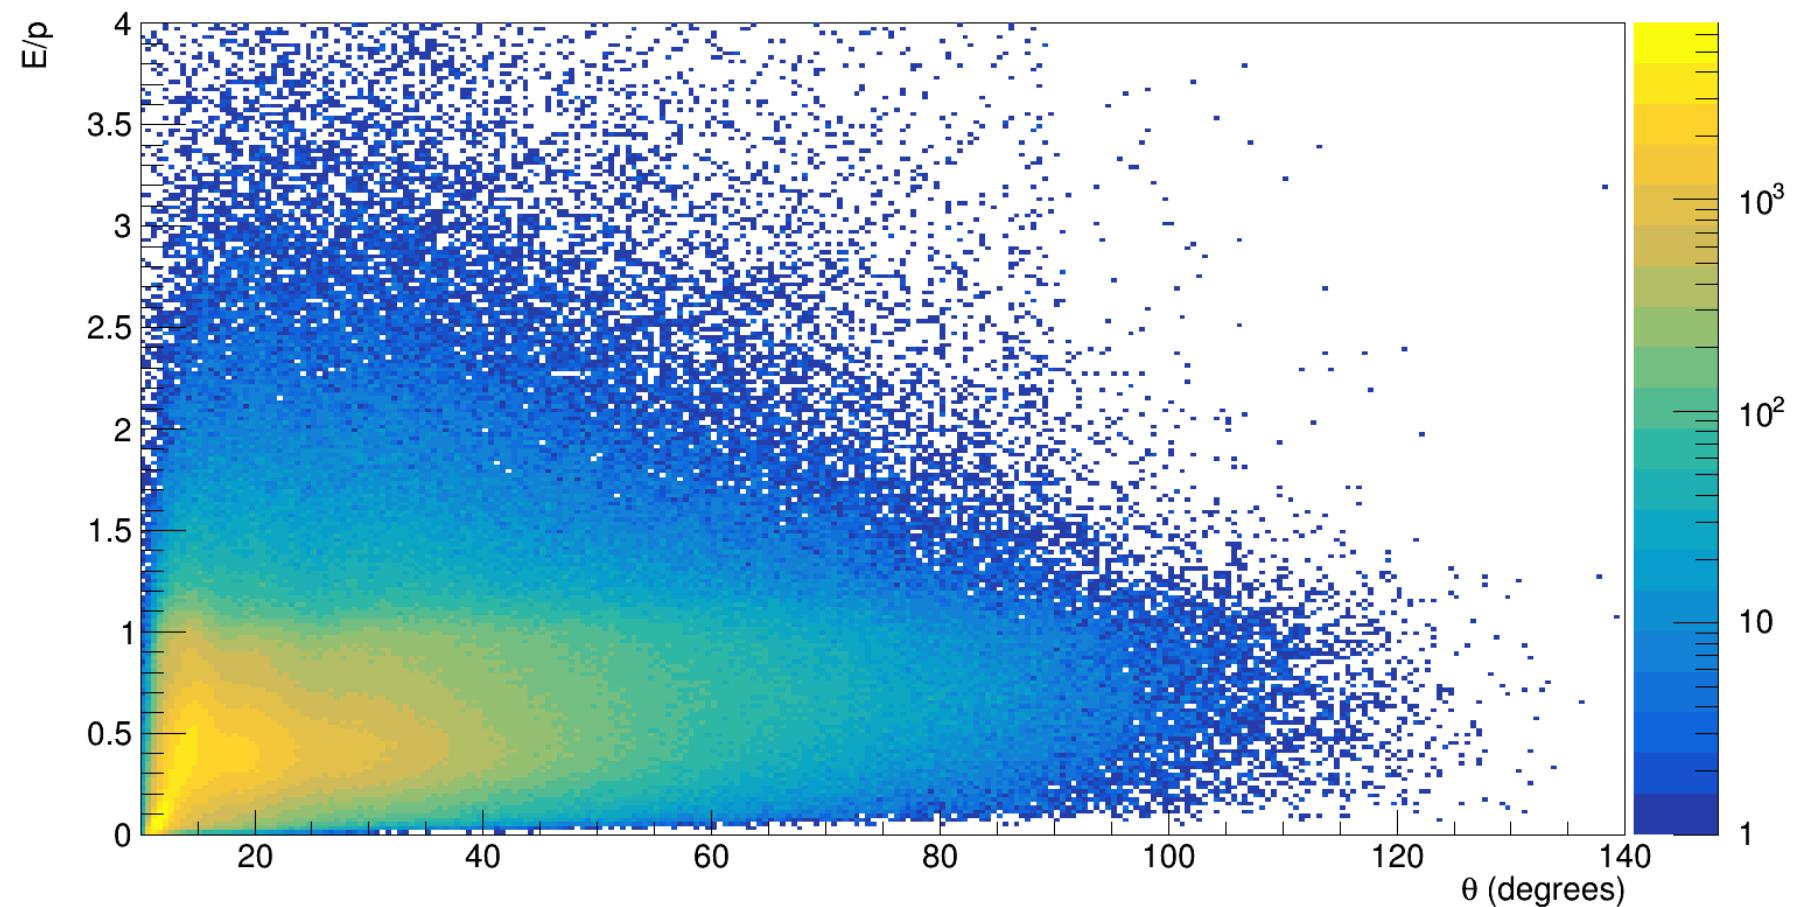

$e^+e^-\gamma$  mass vs FCAL shower energy for  $e^-$

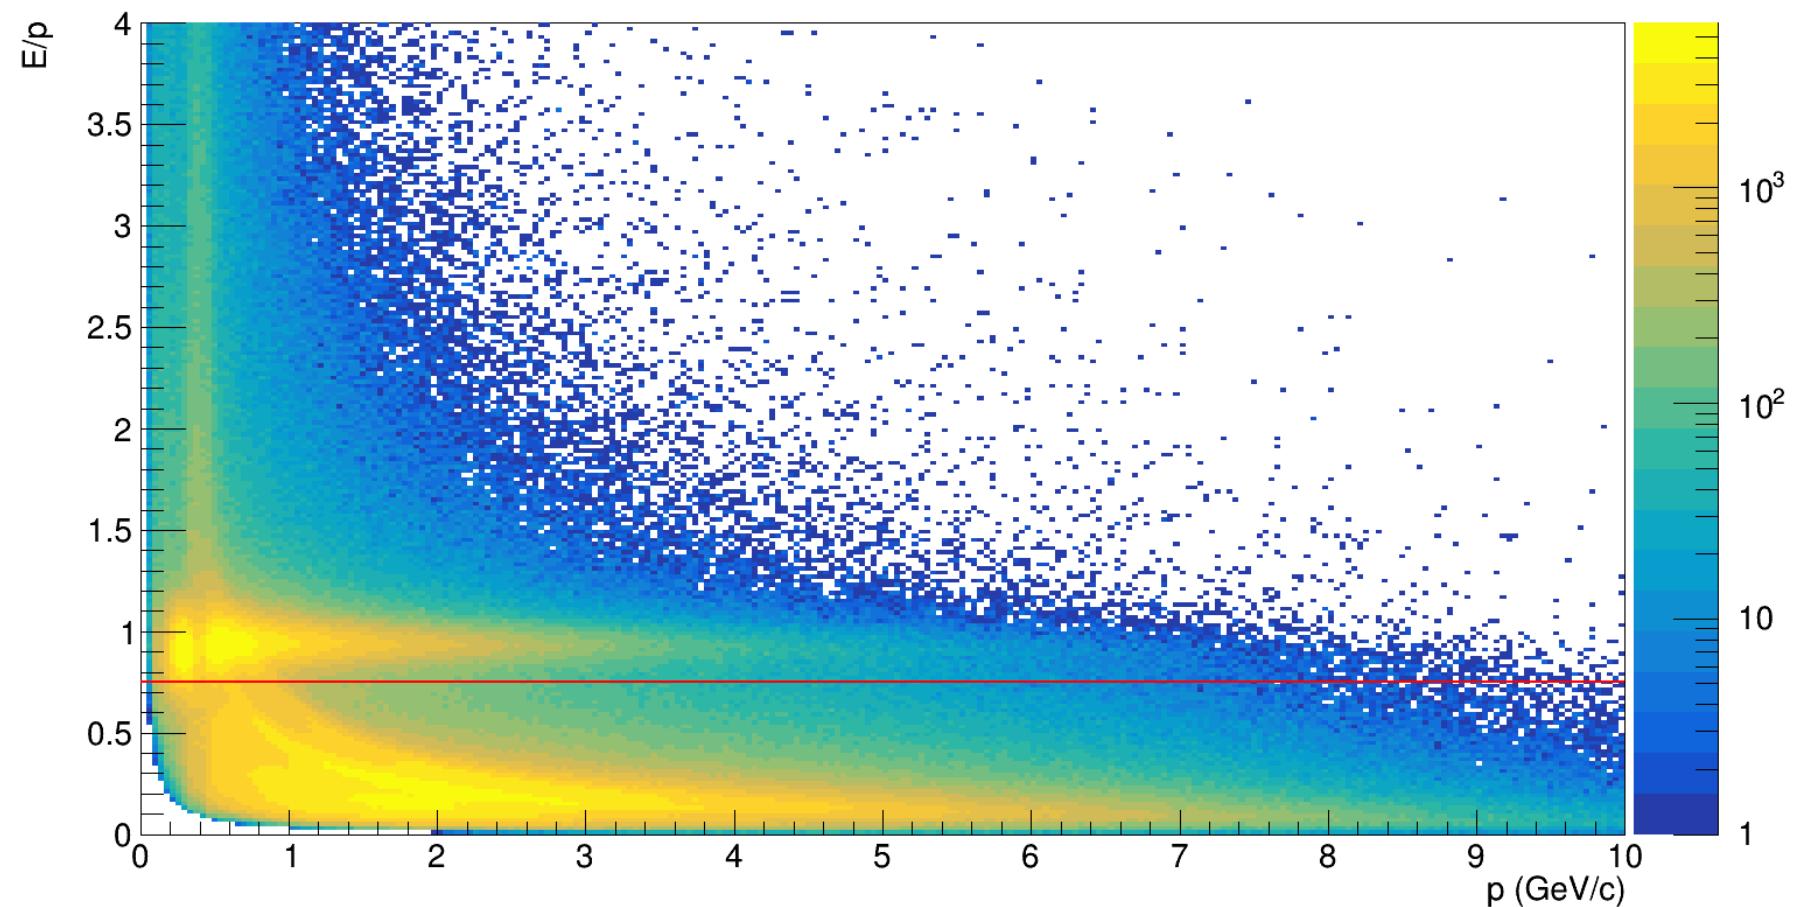

E/p vs p for electrons in BCAL

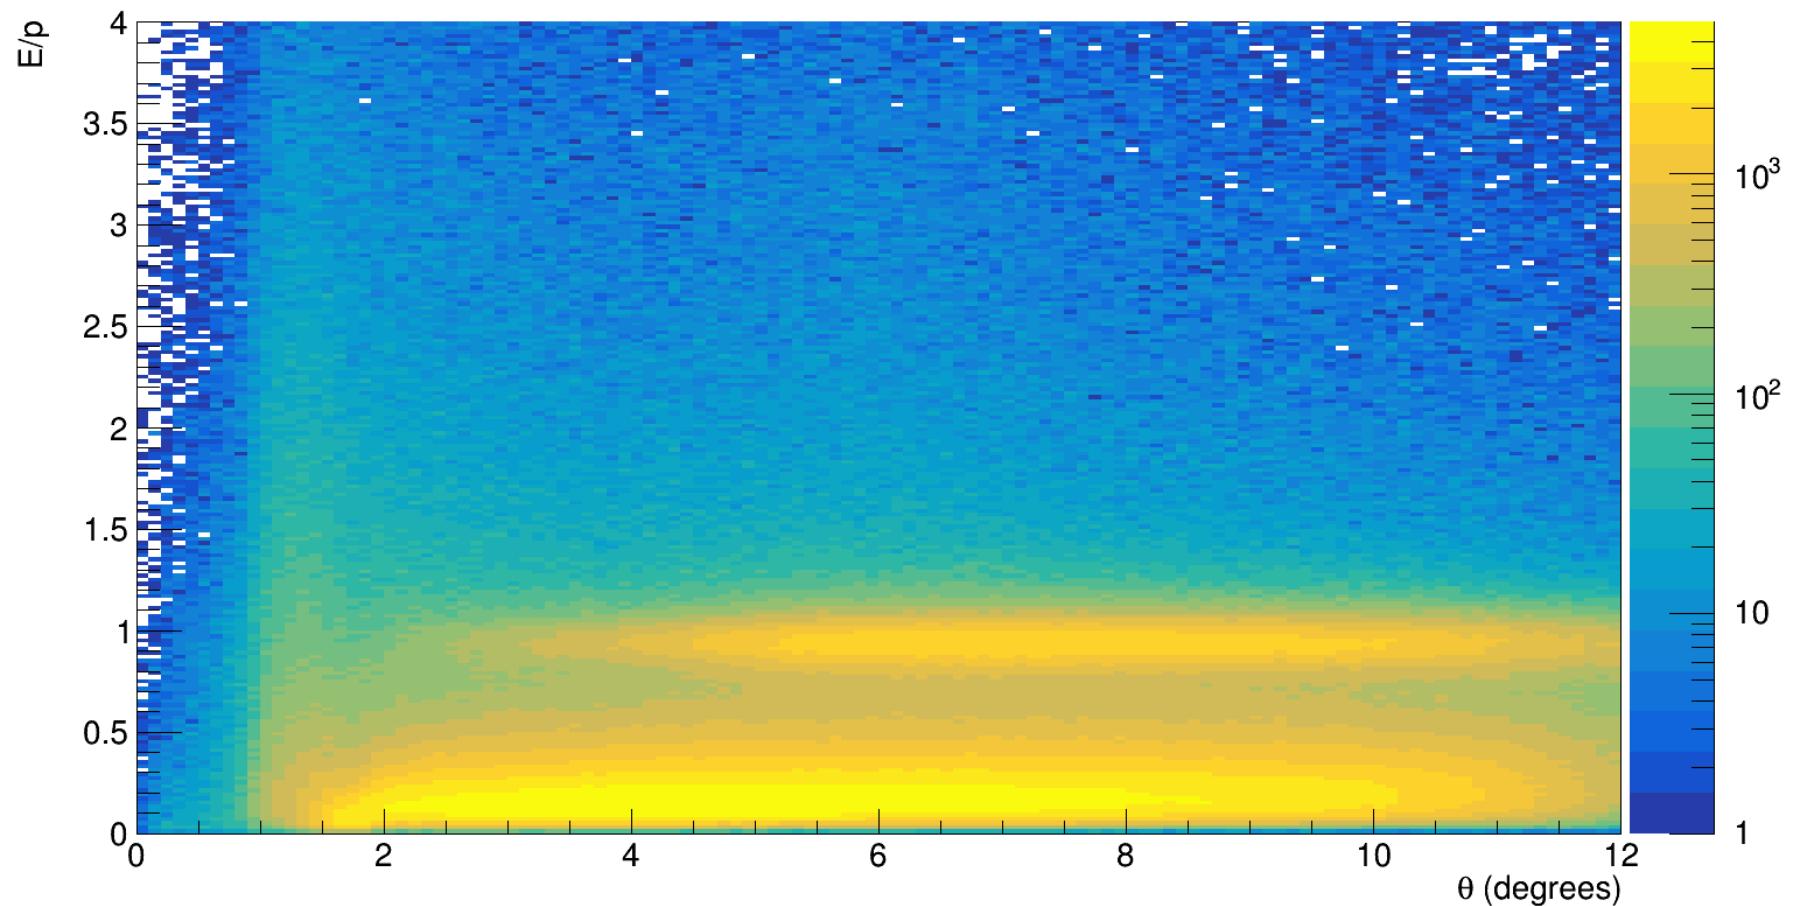

E/p vs  $\theta$  for electrons in BCAL

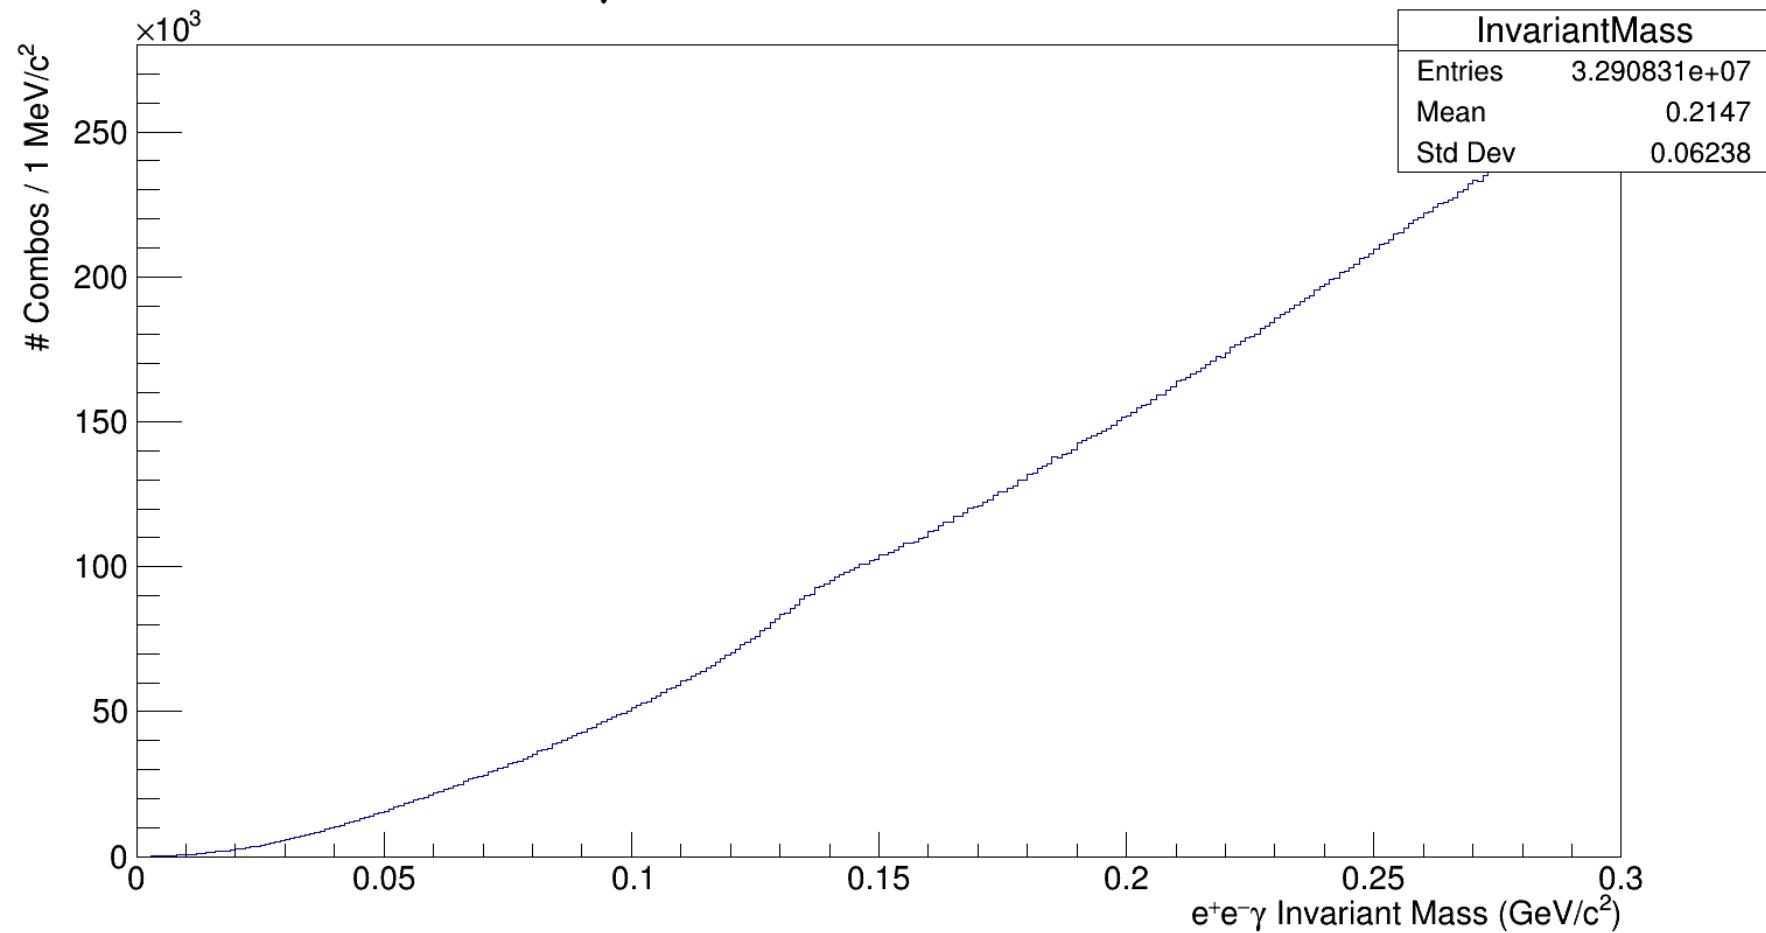

E/p vs p for electrons in FCAL

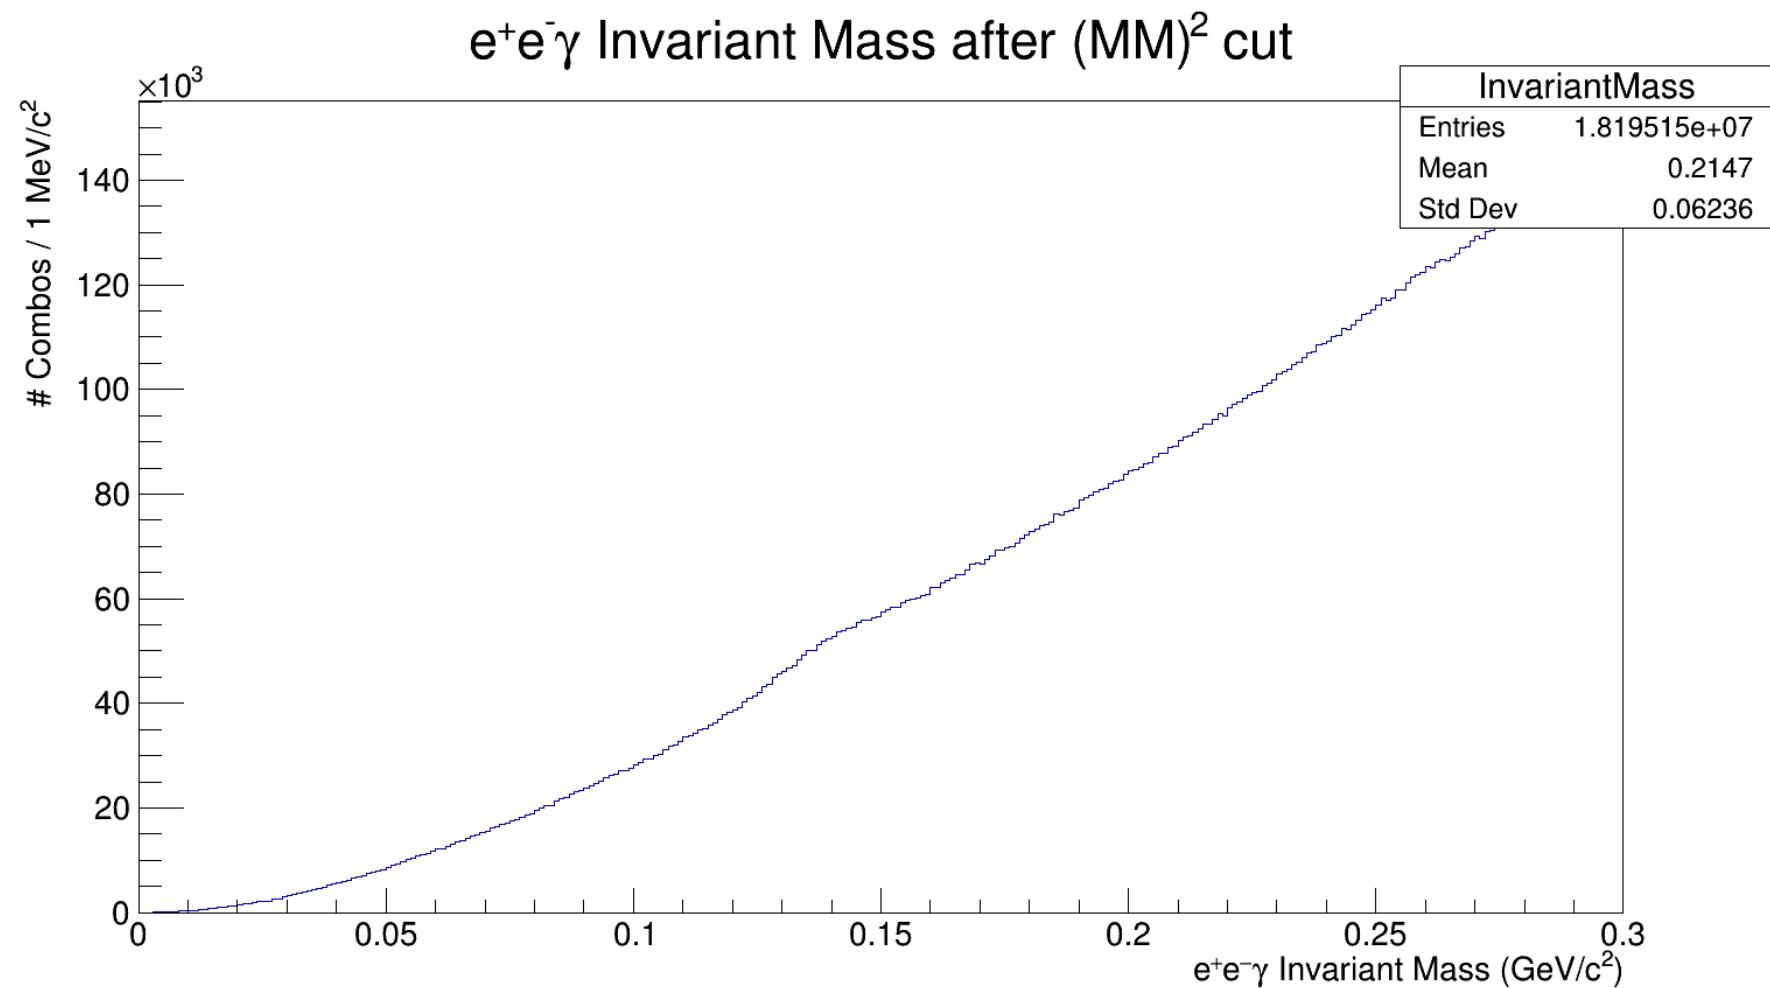

E/p vs  $\theta$  for electrons in FCAL

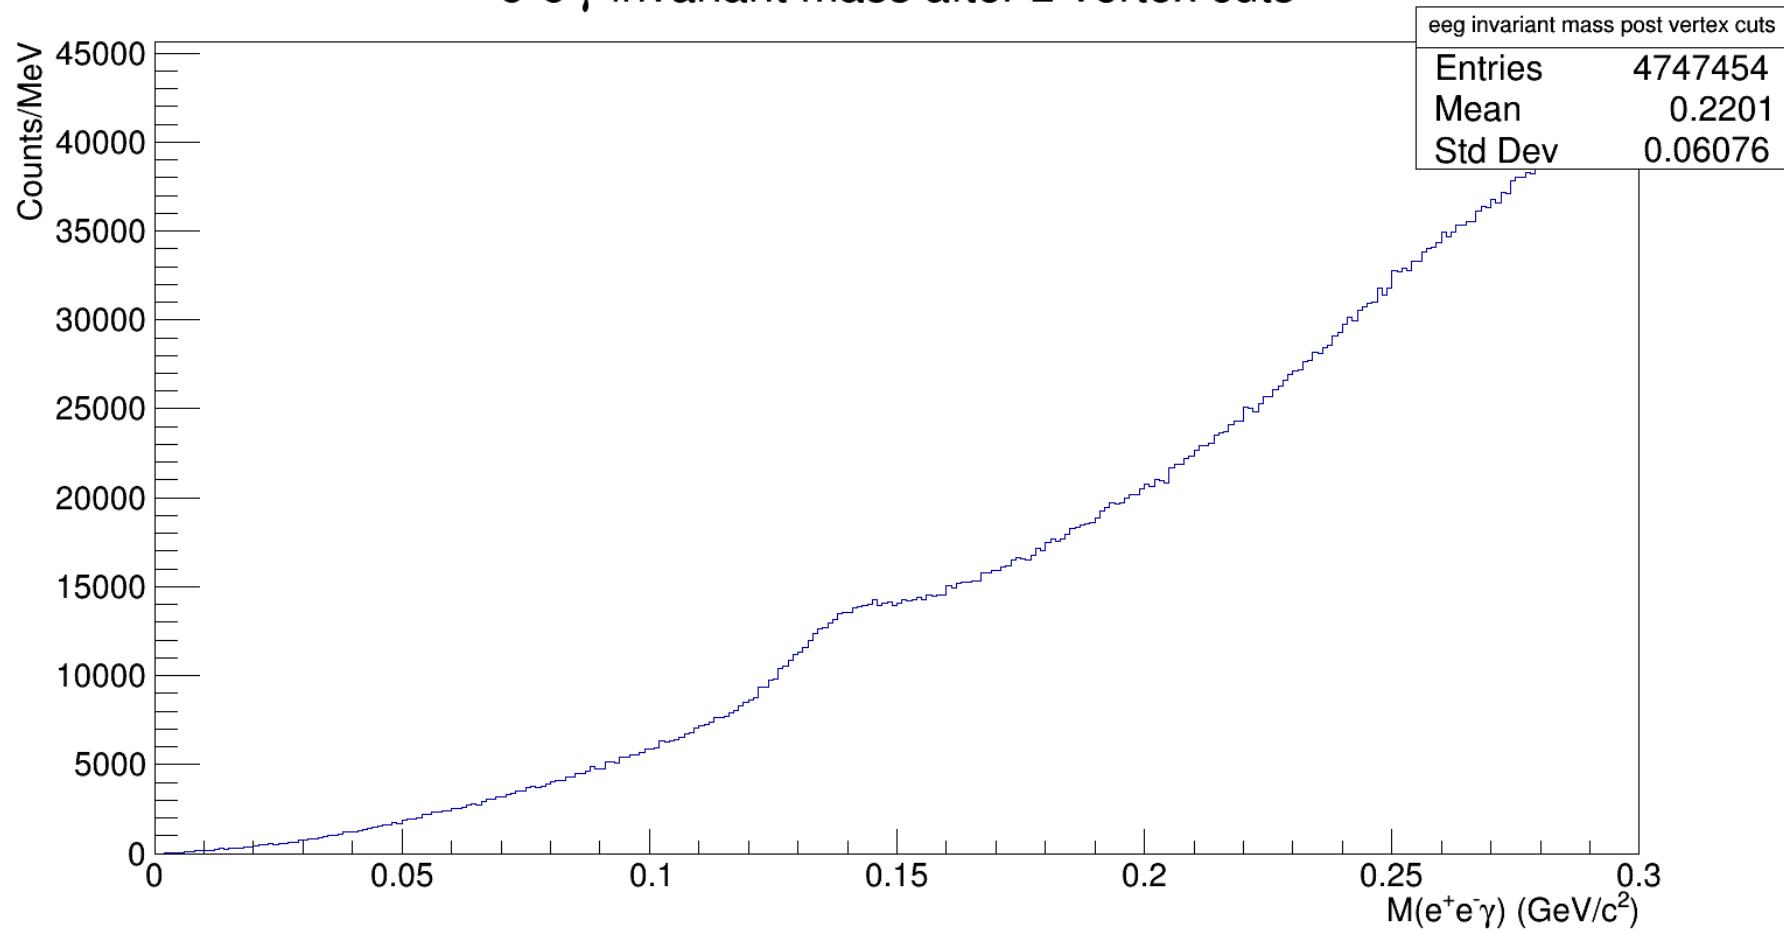

### $e^+e^-\gamma$ Invariant Mass after PID cuts

### $e^+e^-\gamma$ invariant mass after z-vertex cuts

### $e^+e^-\gamma$ invariant mass after $\Delta\theta$ cuts
