

Some problems with the BDT implementation

TMVA overtraining check for classifier: BDT

TMVA overtraining check for classifier: BDT

Aristeidis pointed out that the agreement between the results of the training were not very good by the K-S test (and visually).

Current status is in the plot on the right. Changed some of the input variables and adjusted settings of the BDT – still working to improve these results.

Exclusive			# of PYTHIA Events	# Correct Thrown	# Signal Combos for BDT	% Accepted (MC Cheat)	Background Combos for BDT			BDT Results		
Run #	Field	EM								Purity		
									0.99	0.90	0.70
