

Exclusive ω photoproduction at GlueX

- Overview of s-channel helicity conserving model predictions – compare the two decay modes.
- Briefly discuss existing measurements.
- Show the invariant mass distribution, talk about raw yields for analysis from the commissioning run period.
- Show the raw asymmetries in both the hadronic and radiative decay channel.
- For $\cos \theta$, Compare with MC without doing any explicit acceptance corrections...

$\gamma\rho\rightarrow\rho\pi^+\pi^-\pi^0$ Accidental Subtracted $\Psi \omega\rightarrow\pi^+\pi^-\pi^0$ PARA $\gamma\rho\rightarrow\rho\pi^0\gamma$ Accidental Subtracted $\Psi \omega\rightarrow\pi^0\gamma$ PARA
