

# FCAL monitoring

Run Period 2019-11 ver. 08 eg Batch 02 spectra FCAL Hits 1

reference plot:

run 71596: *looks better?*

run 71598: *looks worse?*

as judged from "FCAL Hit total energy".

However, the "FCAL Hit Occupancy per Event" is different from reference in both cases.

-->

answer in meeting: all ok, it depends how much of the scanned run actually had beam on.

Without beam, there is no higher-energy hits from interactions.
