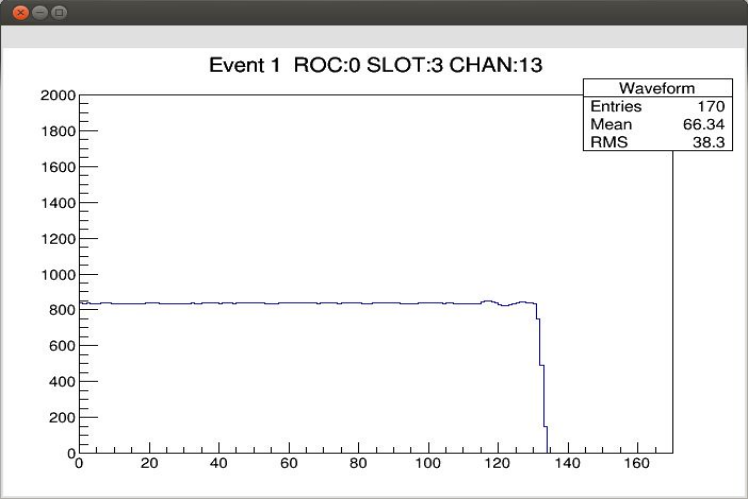
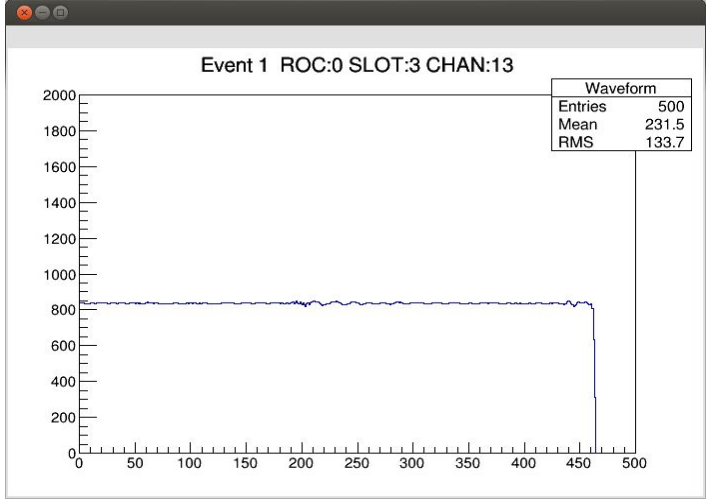
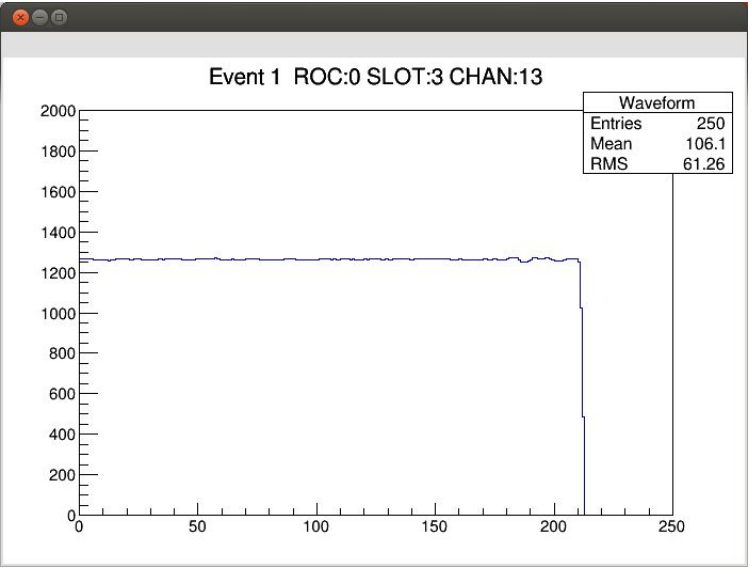
fADC troubles

JLAB meeting 7/14/15

- Waveforms are pushed back ~30 bins to the left of the maximum lookback
- This is not the same problem we had before
- Does not matter what order you set the lookback as (i.e. the waves don’t get pushed back further with each run)
- Problem occurred without any modification to the fADC’s settings







Screenshots of issue

Possible solutions:

Use a different FPGA

HALL D
JLAB
fADC-125
VXS
WIENER
REMOTE CONTROL
